BYRON WESTON

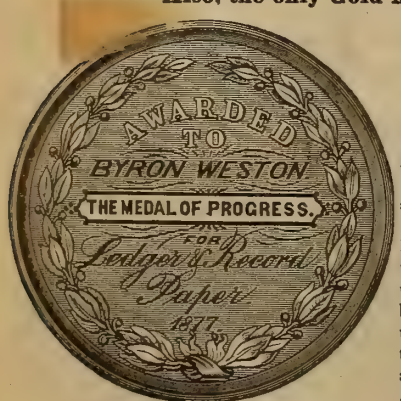
DALTON, MASS., U.S.A.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection



At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**
Each sheet is water-marked with name and date.

LOCKWOOD PRESS, 74 Duane Street, New York.

The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. XII.---NO. 12. NEW YORK, SEPTEMBER 21, 1882. WHOLE NO. 378.

Correspondence.

PHILADELPHIA BI-CENTENNIAL.

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA OFFICE OF THE LOCKWOOD PRESS, 150 South Fourth Street, PHILADELPHIA, September 19, 1882.

There is an active feeling of interest in the Bi-Centennial throughout the stationery trade. Paper dealers, paper makers and manufacturers of stationery in other cities have expressed a desire to participate, and are arranging to be represented here on that occasion. All of the principal firms have organized committees representing their respective trades. The stationers' committee is composed of Charles J. Cohen, Louis Dreka, Frank W. Murphy, William H. Hoskins and Alvah Bushnell, chairman. For the printers and paper makers the names of A. J. Elliot, Charles C. Haffelfinger, Thomas MacKellar are among the members of the committee, with J. Thos. Starcley as chairman. The paper dealers have nominated among others, Thomas W. Price, Edwin J. Howlett and J. G. Ditman, chairman. To represent the leather goods trade the name of Jonas Langfeld, of the firm of Langfeld, Turner & Andrew, stands as one of the most prominent among the members of the committee.

The programme as arranged is very full for the entire week. It comprises introductory religious services on Sunday, October 22. The representation of the landing of Penn will take place on Tuesday, the 24th. On Wednesday there will be a great trades display, with moving historical tableaux, through the streets of the city; a grand musical festival on Thursday. Also on the same day, a regatta on the Schuylkill, and on Friday a grand review of land and naval forces. Other features will be added to the programme, and will be transmitted to you by your correspondent as soon as announced. It is confidently expected that the number of visitors to this city will be greater than at any time during the Centennial. JULES VIENNOT.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., Sept. 19, 1882.

Trade among the stationers is improving from week to week, but there is complaint of backwardness in certain lines. Summer (at this writing) insists upon lingering in the lap of autumn, but with the advent of October, trade will have fairly set in and may be expected to boom on and along until after the holidays. Dealers report stocks ample and in excellent variety. Agents of New York houses see to it that we are fully supplied with all of the novelties in stationery.

The jobbers on Milk, Devonshire, Franklin, School, and other streets where the guild mostly do congregate, report a fair trade during the past fortnight; while the retailers echo the same testimony. A notable feature of trade is the willingness of purchasers to pay good prices for good stock. Poor goods would become a drag in the market, under such circumstances.

The low stage of water in streams where the paper mills are dependent upon water-power, continues in some sections, but the curtailment of production of some kinds of product, in consequence, does not seem to have had any material effect on prices yet.

Doane & Greenough, 116 State street, report a growing country trade, and orders are given fully as liberally as a year ago this time.

A. R. Gay & Co., 130 State street, report a satisfactory retail and jobbing trade. This concern deals largely in counting-house goods.

J. A. Cummings & Co., 252 Washington street, are always busy; they do a good deal of society work.

The firm of Charles K. Darling, 15 Exchange street, continues under the style of the old firm, his son continuing the business. Mr. Darling, who died suddenly last week, was one of the oldest and best-known men in the business, having grown up with it from boyhood. Mr. Darling was a high mason, and was associated in a responsible way with a number of secret benefit societies.

Gunn, Bliss & Curtis, 30 Hawley; H. T. Johnson & Co., 25 Arch; George F. King & Merrill, 29 Hawley; J. L. Fairbanks & Co., 288 Washington, and Lucien Sanderson & Co., 103 Devonshire street, all report a fair trade for the season of the year.

Winkley, Thorp & Dresser, 111 Devonshire street, have no fault to find with the season, trade in blank books and other solid goods being fully up to the mark.

Ward & Gay, 184 Devonshire street, continue to do a large wholesale jobbing and retail trade in paper, envelopes, &c. This firm is getting a good variety ready for the holiday trade.

On Milk street, Hooper, Lewis & Co., Spaulding, Colton & Co., L. B. Brooks, and Knight, Adams & Co.; all report considerable inquiry for goods in their lines. The first mentioned firm is doing a large business in blank books, in which it has become well known throughout the country.

M. M. Ballou, a well-known newspaper man, has joined "Cooks'," on a trip around the world, going westward. He will be absent a year. He recently sold his $700,000 hotel at the South end to the management of a musical conservatory. Most editors are poor, but once in a while one has riches thrust upon him.

On dit that Browne of the New York *Telegram*, is going to take an important position on a Boston daily newspaper soon. Mr. Browne was formerly private secretary to Gov. Andrews.

The Boston *Herald* has almost completed the enlargement of its mechanical capacity, preparatory to making improvements in the paper.

L.

CINCINNATI CLIPS.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, September 16, 1882.

Life is in the trade this very moment. The stationery business here is enjoying a September rush. There is a big wheat crop back of it, a big tobacco crop all around it, and the prospect before it of a big corn crop. Why shouldn't it rush? Dealers in school books have had the usual, in fact more than the usual, call for school-boy tormentors. The little unwise ones, if they only knew what was good for them, the facts wouldn't compel one to speak of their school outfit as "tormentors." All kinds of business is thriving, especially manufacturing. When you learn that Cincinnati employs more than half as many operatives making shoes as Lynn, Mass., besides more than ten thousand mechanics and laborers in the manufacture of iron and iron wares, that bit of intelligence will enable you to appreciate the effect of an industrial tidal wave upon the manufacturing stationery business.

One evidence of the thrift of the country round about, and of the general good feeling in trade, is the growing demand of buyers for the best articles. They will not have anything else except at ruinous figures. Public taste and public judgment somehow are growing more critical on this matter of quality. It may be straddling a hobby to say so, but it is patent that the Centennial Exposition wrought powerfully upon this country, and its workings and influences are all pervasive. The local expositions are re-enforcing that influence. If that is a hobby, so be it. Those who ride it will die early if they do not see the day when the whole horde of Philistines will be compelled to ride it.

Now that I have mentioned the exposition, I may be pardoned for saying that, in point of attendance, the present Cincinnati Exposition will rank with its famous predecessors of 1872 and 1879. In point of intelligent interest in the dis-

play and study of them, the visitors stand in the fore front as compared with those of the past. You have heard that the displays are broadly, some of them brilliantly, set out. The old style of stocking things won't do, and it won't win. Jurors are suddenly seized with a sort of disgust at a good thing poorly set out, and you know a disgusted juror is not likely to be partial or favorable to the object which excites such a feeling. A realizing sense of this fact has induced all exhibitors to put the very best foot forward. Among the exhibits are a couple of competitors on removable blank book covers—a couple in paper files, if we include the Globe Files Company's display—one from Nashville in birthday and Christmas cards and fancy boxes, &c. —one in a ruling machine in operation in power hall—one in fancy envelopes and other fancy stationery and kindred goods. The Globe Files Company has a gorgeously fitted up alcove that shines among the lighting lighted palaces of the great audience room of Music Hall. In the machinery department are steam engines and pumps, and a variety of indispensables to every paper mill and printing establishment. Now, I have doubtless omitted somebody or something, for which I beg pardon in advance.

No one seems to be going into business in the paper or stationery trade, either in the mercantile or manufacturing line. On the other hand, everybody is occupying all his space, working all his force, and looking on, wishing for more room. More and better machinery is coming into use, and better work is demanded. There is less haggling about prices than usual, and what is a good omen, less disposition to give to the "lowest bidder," than formerly. Men can't do something for nothing. People enough have been bitten by beating down all bidders to the lowest notch and then taking the "lowest" to have learned by this time that "the lowest" is often "the worst," and that the cost of compelling a low "bidder" to come up to his contract is much greater than the difference between him and the highest and best bidder. This benefiting by experience applies to Cincinnati. I know many men here have learned some wisdom on this very point by bitter, expensive experience, and I know, too, that the lowest bidder doesn't always get the job.

The set of trade for the south from this city continues. Paper dealers and manufacturing dealers are swelling that current with their products. That the South is destined to be to Cincinnati what the Northwest is to Chicago, and that soon, is no enthusiast's vision. Some see it now. Others won't see it till the realization comes. It's the old story of men classified as smilers and weepers. PRINCE WILLIAM.

LOUISVILLE LOOSE-ENDS.

[FROM OUR REGULAR CORRESPONDENT.]

LOUISVILLE, Ky., September 16, 1882.

THE PROCESSION.

Out of the way, O red-haired child !
Don't you see the procession coming ?
Banners and bows, and streamers wild !
Hark ! what a rolling ! what a humming !

Why do they set the world on wheels,
Grinding the city's pave for miles ?
Where can so many find their meals ?
Somebody must have coin in piles !

—*Local Bard.*

The industrial parade on the 12th was a real boomer in every respect; the procession was over ten miles long, and presented a complete exhibit of the city's varied commercial and manufacturing resources. The number of visitors attracted from the surrounding country was unprecedented, and exceeded the most sanguine expectations of the managing committee. Reliable estimates indicate that fully 200,000 strangers have been in the city during the past week. The old town was thoroughly "shook up," and is now enjoying a rush of trade that eclipses anything in its previous history. Among the firms known to your readers that were represented in the parade were the following named:

John P. Morton & Co. displayed an immense model of a blank book, perfect in shape and design, and larger than the wagon whereon it was mounted; it was one of the features of the procession.

The Gilbert & Mallory Publishing Company had four wagons in line with pyramids of blank books, stationery, paper boxes and general stock arranged in attractive style.

Rogers & Tuley showed a mountain of paper boxes from their factory.

Wm. P. Sloan & Co. exhibited samples of their binding and blank books, the horses drawing the float being saddled with huge books.

Hegan Brothers displayed a heavy load of wall paper and art goods, American and imported, in original packages.

The Polytechnic Society had a fine pavilion mounted on a float, containing a large celestial globe, and advertising its free libraries in effective style. Several of the stationers who were not represented inform me that it was because they were so busy that they had no time to arrange for an exhibit, and this was the case with houses in all branches of trade. Allow me to repeat that Louisville is in the midst of the most animated distribution of merchandise she has ever encountered. Jobbers are crowded to the utmost, factories are working full tilt, and the attendance at the Exposition and at the Fair is large enough to make the retailers smile in their activity.

Henry E. Hewes, the well-known and highly esteemed general manager for John P. Morton & Co. is in the Northwest on his wedding tour. The trade, who have known him as a single man so long that they began to regard him as a confirmed bachelor, will be loth to believe it; but it is a fact—he was married last week. His host of friends will join me in saying that a truer gentleman and a more efficient and faithful business man is not to be found.

Tom B. Poutch, aid-de-camp to Mr. Hewes, at Morton's, reports the local stationery trade very brisk, and says that Southern and Western jobbing orders are coming in more liberally than usual even for September.

Geo. H. Dietz & Co. have just published for Col. A. Hogeland, the author, "Ten Years Among the Newsboys," a book of over 100 pages, with several spirited illustrations. It is creditable to both author and printer, and is having a wide sale. By the way, Col. Hogeland was in the parade as marshal of his brigade of newsboys.

The house of Lindsey & Brother, artists' materials, has changed style to T. N. Lindsey.

Mrs. R. R. Bolling has returned from a European trip of five months, and displays at her store several importations of fine china and novelties of her own selection.

Du Pont & Co., proprietors of the Louisville Paper Mills, report an active demand and firm market for "news," also heavy sales of general printers' stock.

The opportunities and inducements to liberal advertising afforded here in the past few weeks, led to an extraordinary consumption of paper in the way of circulars, handbills, programmes, &c., and the supplies of the leading houses have consequently been handsomely reduced.

Sharpe & Middleton, prominent retailers of dry goods, have opened a book and music department, and competitors of the new venture in the regular trade are justly growling all down the line. The book trade here can now feel more pointedly than before the force of the story cited in the leading editorial note of THE STATIONER of last week (page 414).

A. D. Ross & Co. is the name of a new book firm on West Market, near Sixth street.

M. W. Sherrill now runs his printing department under the style of Sherrill, Brown & Co.

A local item says that Dr. J. P. Barnum has the largest collection of engravings in this city; Dr. Breyfogle the largest coin collection; Rev. Dr. Boyce the largest book collection, and Geo. H. Moore the largest collection of paintings; while Judges James Harlan and Fountaine T. Fox are among the best authorities on old books. (Mr. Editor, please insert the big word needed here.)

The tenth annual Louisville Exposition is having a successful season. The art gallery is very fine, and a few of the "gems" are by home artists. The ladies' department shows many novelties and a great variety of fine work. The display of the Women's Silk Culture Association is an attractive feature, and includes hundreds of cocoons; but more anon.

With fine crops, glorious weather, plenty of amusements for the visitors, and all the business she can handle, Louisville can say, "Allah be praised !"

Next week the fall races—and more business and fun.

Following are a few notes from interior Kentucky:

The Carlisle *Mercury* knows a man who carries a "bit" bearing the stamp of 1775, and a Spanish 20-cent piece dated 1736, and another citizen who has a German coin of 1774 and an Austrian that left the mint in 1779.

John S. Orr, publisher of the *Bracken Chronicle*, at Augusta (Ky.), has associated with him H. V. Morris and B. F. Catthar, forming a corporation to be known as the *Chronicle* Printing and Publishing Company.

The *Mountain Scorcher*, at West Liberty (Ky.), has changed name to *Licking Valley Scorcher*.

L. J. Clark, bookseller and stationer, Bowling Green, has been suceeeded by Clark & Clark.

Allie Matthews is the editor of the Burksville *Bulletin*. A cynic on a city paper says that she tells what is true about politics, but if she was to write up the costumes at a ball he would expect to see prejudice creep in.

Prof. J. K. Gwynn has started the *Bullitt Pioneer* at Shepherdsville—the first paper in one of the oldest towns in the State.

Ex-Lieutenant-Governor John C. Underwood, of Kentucky, is establishing a great Democratic daily at Cincinnati. BOURBON.

Dr. W. Reissig, of Munich, has recently made an ink for canceling stamps which is totally indelible, and the least trace of it can be detected chemically. It consists of sixteen parts of boiled linseed-oil varnish, six parts of the finest lampblack, and from two to five parts of perchloride of iron. Diluted with one-eighth the quantity of boiled oil varnish, it can be used for a stamp. Of course, it can only be used with rubber stamps, for metallic type would be destroyed by the chlorine in the ink. To avoid this, the perchloride of iron may be dissolved in absolute alcohol, and enough pulverized metallic iron added to reduce it to the protochloride, which is rapidly dried and added to the ink. Instead of the chloride, other salts of protoxide or peroxide of iron can be used. The iron unites with the cellulose and the sizing of the paper, so that it can easily be detected even after the ink has all been washed off. Sulphide of ammonia is well adapted to its detection.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President. **DALTON, MASS., U. S. A.** JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show.

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS

LINEN LEDGER PAPER

Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

Being **Triple Sized** (a process entirely our own) and **Loft Dried**, can be erased and written upon the fifth time distinctly. None genuine without the water-mark, thus—**Old Berkshire Mills Linen Ledger**, and date.

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

THE previous success of our Cards, it is confidently expected, will be fully sustained, if not increased this season, an expectation which is already verified by the large advance orders received, justifying our increased efforts to bring out a line superior to all our previous productions. Our line will again comprise Double and Fringed Cards as well as Heavy Mounts. All the Fringed Cards will be provided with protectors, and envelopes will be furnished for all cards costing $1.80 and upward. The names of the artists who have contributed designs are a guarantee of the excellence of our Cards. We will name only the following :

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,

MISS F. BRIDGES,
MISS ROSINA EMMET,
THOMAS MORAN,
ALEXANDER SANDIER,
R. G. BIRCH,
GEO. J. BARNES,

MISS DORA WHEELER,
MISS FLORENCE TABER,
FREDERICK DIELMAN,
HARRY BEARD,
F. SCHUYLER MATHEWS,
H. P. KENDALL.

The literary matter in connection with our designs has been carefully attended to, among others, by MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

No. 31 Maiden Lane,
New York, 1882

To the Booksellers and Stationers

Gentlemen;

We have prepared a catalogue of specialties for the Holiday trade. It is finely illustrated, showing over one hundred choice designs, and will be forwarded to dealers, free of charge, upon receipt of their applications.

Very truly, John Wilson's Sons

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

ADHESIVE HOOKS.

A tasteful and useful novelty is to be found in the adhesive hooks, which are preferable to tacks and nails for hanging pictures, plaques, calendars, match-boxes, almanacs, time tables, show-cards, brushes, toilet cases, catch-alls, watches, &c., upon, besides a hundred-and-one other purposes. They will be found useful in stores to display goods, and in every office, counting-room, hotel, bank and railroad station they will be a convenience.

The adhesive hooks can be used in many places where tacks or nails cannot be driven, as on stone or brick walls, metal surfaces, glass, &c. They are easily put up. Simply moisten the backs and press firmly against the wall or other surface for a moment, and after a few minutes' drying they are ready for use. They are made in various ornamental styles, as ivy and autumn leaves, and other elegant designs lithographed in brilliant colors. The hook itself is of strong, bright metal, attached firmly to the adhesive ornament, through a heavy reinforce, so that it is very strong and reliable. The cuts fully illustrate the use of the hooks. These hooks are brand new and are of utility and real beauty, light to handle, low in price and quick selling, leaving a handsome profit to the dealer. The goods are packed six designs in a round, gilt-trimmed box. W. H. Hasbrouck, 91 Liberty street, New York, has them.

—:o:—

NEW PATENTS.

No. 263,437. Automatic Toy.—John J. Slocum, New York, assignor of one-half to John C. Mount, Jr., Brooklyn, N. Y.

No. 263,440. Paper-Bag Machine.—Charles B. Stilwell, Watertown, N. Y., assignor to the Union Paper-Bag Machine Company, Philadelphia, Pa.

No. 263,449. Inkstand.—George V. Wood and Walter L. Galloway, Smithville, Va.

No. 263,459. Aligner for Type Writers.—Chas. J. Baker, Topeka, Kans.

No. 263,508. Writing Ink.—Oliver A. Goold, Boston, Mass., assignor to the United States Indelible Ink Company, same place.

Mixes the ingredients in the following proportions, viz.: one pint of extract of hemlock-bark, one gill of alcohol, one ounce of nitrate of iron, and one-quarter ounce of prussiate of potassium.

No. 263,531. Carpet Lining.—Martin V. Kacer, St. Louis, Mo.

No. 263,561. Book-Stapling Machine.—Samuel E. Mower, Milford, assignor to Henry G. Thompson & Son, New Haven, Conn.

No. 263,576. Bill File.—Merritt F. Potter, Hinckley, Ill.

No. 263,580. Spelling Puzzle.—Wm. H. Reiff, Philadelphia, Pa., assignor to Thomas R. Boone, Rochester, N. Y.

No. 263,600. Attaching Strings to Tags.—Theodore W. Searing, New York, N. Y.

An improved method of securing strings to tags, consisting in first depressing the central portion of the tag at one end, then placing the end or ends of the string into such depression, and securing the ends in place by a covering-piece coated with a suitable adhesive substance.

No. 263,613. Writing Tablet.—Scovel C. Stacy, Tecumseh, Mich.

No. 263,685. Paper File.—Chester C. Clark, Brownwood, Texas.

No. 263,707. Type and Space Holder.—Louis K. Johnson, Brooklyn, N. Y.

No. 263,745. Printing Machine.—Edwyn Anthony, New York, N. Y.

The combination of mechanism for printing two webs (so that both sides of each web are printed on alike) with mechanism for cutting the webs and associating alternate portions of one of the webs with the upper and alternate portions with the under side of the other web.

No. 263,746. Delivery Apparatus for Printing Machines.—Edwyn Anthony, New York, N. Y.

A collecting apparatus consisting of three sets of tapes and their supporting rollers, several of the rollers of two of the sets of tapes being adjustable, to vary the length of the circuits for sheets of different sizes, in combination with feeding devices arranged so that the sheets fed to the collecting apparatus meet those therein at the point of entrance thereto.

No. 263,747. Printing Machine.—Edwyn Anthony, New York, N. Y.

In a printing press, a cylinder provided with forms placed on it and divided into three or more distinct portions, in combination with impression cylinders and carrier rollers, whereby greater facilities are obtained for printing the forms on the web in various orders than when the forms are placed on it in one or two portions only.

No. 263,748. Printing Machine.—Edwyn Anthony, and Jacob E. Harvey, New York, N. Y.

The combination of a mechanism for printing a plurality of webs (so that matter shall be imprinted on each web) with mechanism for reversing without transferring one of the webs, and mechanism for bringing together the reversed web and the other web or webs, whereby the webs become one product and may be operated on together in the subsequent folding processes.

No. 263,749. Folding Apparatus.—Edwyn Anthony and Jacob E. Harvey, New York, N. Y.

No. 263,750. Web-Reversing Apparatus for Printing Machines.—Edwyn Anthony and Jacob E. Harvey, New York, N. Y.

No. 263,762. Chromatic Printing Apparatus.—Edgar H. Caughey, Erie, Pa.

A chromatic printing apparatus consisting essentially of the combination of the following elements: a body having therein one or more ink-wells, a face cap or plate covering the same, in which are openings into the ink well or wells of the form of the design to be printed, type formed of absorbent material mounted in the openings and extending into the ink well or wells, and, finally, pressure plates working in slots in the face of the body-plate, and which are connected with mechanism whereby when the printing apparatus, as a whole, is under pressure the type formed of absorbent material will be raised from the ink well or wells and pressed against the material being printed.

No. 263,776. Pencil Sharpener.—Peter R. Erling, Chicago, Ill.

No. 263,777. Combined Match-Box and Knife.—Le Roy W. Fairchild, New York, N. Y.

TRADE-MARKS.

Solicitor of United States and Foreign Patents and Trade-Marks,

No. 140 Nassau St., New York City.

American, Canadian, British and Continental Patents obtained for Inventors on favorable terms, and in the shortest possible time. Caveats filed, Reissues and Design Patents secured, Trade-marks and Labels protected by registry at the U. S. Patent Office and in Canada and Europe, Rejected Cases investigated and reported upon, Interferences conducted, Opinions on Questions of Infringement, the Validity of Patents, &c., &c.

PERSONAL attention throughout is given to each and every case—a matter of no inconsiderable importance to those who wish STRONG CLAIMS and specifications CAREFULLY DRAWN. Business may be transacted either in person or by mail, and in every detail is kept inviolably SECRET and CONFIDENTIAL.

JAMES A WHITNEY, 140 Nassau St., N. Y. City.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Most of the fancy goods dealers report a flourishing trade this week.

The trade should see Oscar Strasburger & Co.'s beautiful line of goods.

Roberts & Rolls, dealers in art novelties, New York, have removed from No. 331 Fourth avenue to No. 757 Broadway.

Hard & Parsons are producing all of their new designs for illuminated papeteries in oil colors.

J. B. Lippincott & Co.'s monthly bulletin of new publications is ready for the trade. It has some interesting announcements.

Lee & Hubbard is the style of a new firm just starting in the stationery business at Topeka, Kansas. Mr. Lee was formerly a stationer at Alton, Ill.

Nathaniel Bloom shows a very large line of fancy goods suitable to the stationery trade, a detailed account of which will appear in a future issue of THE STATIONER.

Selchow & Righter have secured an injunction from Judge Van Brunt, restraining a certain firm in this city from selling or offering to sell any game or puzzle bearing imitation labels or the trade-mark of "sliced objects," &c.

Among the visiting members of the trade to the city during the week were J. C. Eyrich, New Orleans; C. W. Yates, Wilmington, N. C.; Mr. Kennedy, of Kennedy, Strome & Co., Winnipeg, Manitoba; J. E. Mason, Galveston, Tex.; R. S. Patterson, Port Huron, Mich.

Charles Longstreth, who, as mentioned in last week's issue of THE STATIONER, is to take charge of the stationery department of Mermod, Jaccard & Co., St. Louis, has been for the past two years with G. P. Putnam's Sons, of this city. Mr. Longstreth leaves to-night for his new quarters.

W. A. & C. S. Houghton, Sacramento, Cal., made a great display of their wares at the fair recently held at that place. They are the leading wholesale and retail booksellers, importers and dealers in fine stationery and of books in all interior California. Their beautiful storerooms in Sacramento constitute a most tempting resort to the lover of rare and rich articles of the stationer's trade.

Almost everything that literary genius and art can invent for little people is contained in "Our Little Ones," the first series of which had so enormous a sale last year. Everything in the book is new and original, from the pens of the best writers and the studios of the best artists in America. The second series will appear this fall, in one volume, beautifully bound, and all parents will be on the lookout for it.

Tuttle & Co. Rutland, Vt., publish the "Santa Claus Souvenir," a holiday novelty brought out last fall, and of which over 14,000 were sold before September 15. The novelty consists of a book, the covers of which represent a figure of "Santa Claus" emerging from a chimney. The covers are lithographed in colors and embossed. It contains twelve pages, on which are printed contributions from well-known authors. The work has been produced under the editorial supervision of Mrs. Dorr.

Henry Levy & Son are reaping the benefit of their energy and enterprise. Their establishment this week has more the appearance of a fair than of an ordinary business mart. The place was crowded with buyers, and their staff of salesmen were insufficient to attend on all. This season's rush may be attributed to the excellent prospects of trade throughout the Union, but it is claimed that the house is commanding more than the average share of trade by offering its manufactured goods at lower prices and of a better quality than any similar ones imported. This fact is so confirmed that articles of their manufacture are said to have become a standard class of merchandise in the trade. A few seasons ago merchants would ask for August Klein's, Herman Lehman's, &c., fancy leather and silk goods, but these names have passed out of the market, and Henry Levy & Son, by patient industry and perseverance, have taken their place. This has been achieved by making only articles of artistic and desirable merit at popular prices.

A sure way to build up a trade and become rich is to adopt the rule of handling a good and cheap article. This rule, when followed out, never fails in accomplishing its object. Some firms in this city partially follow this method of doing business, and consequently they are steadily developing a healthy trade. Perhaps there is none more noticeable in this respect than that of McCarty & Hasberg, whose elegant and varied lines of goods are among the richest and cheapest articles of the kind ever offered. All who have inspected these goods have made purchases from them which is a sure sign of their worth. The house is at present working nights so as to fill its orders in time, and every day this week the warerooms have been crowded with buyers.

It was anticipated some months ago that the fall trade would surpass that of any season for some years. In certain lines the expectations were realized, but in others matters looked very bad until a few days ago, when it appears that a general activity sprung up for almost all lines of goods handled by stationers. Before this, several firms that had laid in large stocks felt very shaky, particularly those that added new and expensive lines to the ones handled last year. To them the sudden revival of business has been right royally welcomed, and now the doubts expressed a week or two ago have been superseded by utterances regarding the prosperity of the season.

Philip Hake has in course of preparation a new and very elegant line, embracing fifteen new designs of dinner, menu and valentine cards, a description of which will be given later on, as at present no one is allowed a peep at them, not even the representative of THE STATIONER. Mr. Hake has always been in the front rank in these goods, and he intends to retain that position.

Chas. L. Baker, representing Myers Brothers in Philadelphia, has just returned from his annual trip in the West where he found business exceptionally good. He is now taking orders in Philadelphia, and meeting with success.

E. G. Locke & Co., Philadelphia, have a large and complete assortment of enameled surface card-board for chromo-lithographic printing, which article is now in great demand.

The blank-book trade is reported to be very good in Philadelphia. Nagle & Co. are filling many important orders for canvas books.

Moses H. Sargent & Sons, booksellers and stationers, Boston, Mass., have sold out.

E. G. Hogain succeeds Colonel MacReady, publisher, Kokomo, Col.

James E. Anderson, publisher of the *Leader*, Eureka, Nevada, has sold out.

Mrs. George Enos, dealer in notions, Cleveland, Ohio, is advertising to close out.

J. P. Killinger, publisher of the *Record*, San Jose, Cal., has filed a petition in insolvency.

H. S. G. Ascher, dealer in fancy goods Montreal, has admitted C. L. De Sola. The style is now De Sola Brothers & Ascher.

C. J. Atkinson, printer, Portage La Prairie, has admitted C. Mathers to partnership, under the style of Mathers & Atkinson.

Alvah Bushnell, Philadelphia, has received this week large orders for his handy blotter, which is one of the best articles of the kind in the market.

William C. Horn has applied himself so closely to business this summer that he has had no opportunity until the present for any respite from the daily routine of the office. He left the city this week for a short term of recreation on Long Island, taking his dog and gun with him.

J. H. Bufford's Sons are constantly bringing out something new. Almost every week several pretty designs are added to some of the various lines which they handle. This enterprise of the firm is steadily bringing a great many customers, all of whom after once handling the goods are sure to buy again.

Gebhard & Pease is the style of a new firm just established at Detroit, Mich., to engage in the business of dealing in papers and printers' supplies. Mr. Gebhard has been engaged in the same line of business for several years. Mr. Pease is a brother of George L. Pease, of this city, by whom both gentlemen were formerly employed as clerks.

The Stationers' Board of Trade was never more prosperous than it is at present, and its facilities in the way of collections and information in regard to the standing of the trade should be availed of by every house extending credits to its customers. It is gradually receiving accessions to its membership, and this season of the year would be a very suitable time to form a connection with it.

Among the arrivals in the trade this week were: J. W. Kennedy, of J. W. Kennedy & Co., Baltimore, Md.; G. W. Baldwin, Houston, Texas; O. O. Wells, Riverhead, L. I.; Mr. Lee and Mr. Hubbard, of Lee & Hubbard, Topeka, Kan.; J. C. Eyrich, New Orleans; A. F. Davis, of Daniel Perrin, Providence; Mr. Kraus, of Hansle & Kraus, Buffalo, N. Y.; F. Vansanten, Charleston; James A. Lee, New Iberia, La.; W. F. Decker, Hyde Park, Pa.; G. A. Stancil, Penny Hill, N. C.; C. A. Davis, of C. A. Davis & Co., Greensboro, Ga.; G. J. Luhn, Charleston, S. C.; F. M. Swan, Natchez, Miss.; Mr. Lay, of Lay & Co., Winona, Miss.; N. Gallaher, Warrenton, Ga.; Mr. Busick, of Busick, Stevens & Co., Brandon, Miss.

Edward Greéy, who was a member of the famous expedition which in 1854 caused "The Land of the Rising Sun" to be opened to Eastern civilization, and who was long a resident in Japan, is the author of "The Wonderful City of Tokio," a new book for boys which Lee & Shepard will publish this fall. One of the most interesting features of the book are the descriptions of the various trades practised in Japan. Everything that a boy wishes to know about this strange land is told in the volume, of which most of the illustrations were prepared by a Japanese artist. The book is a companion volume

of "Young Americans in Japan," published last year.

John P. Irish, publisher, Iowa City, Iowa, has sold out.

G. N. Ward, dealer in fancy goods, Biddeford, Me., is dead.

H. E. Boothby, publisher, Merced, Cal., has sold out to S. C. Baker.

Carpenter & Hair, dealers in notions, Bowling Green, Ky., have sold out.

Charles W. Fears, newsdealer, &c., York, Pa., is removing to West Union.

Charles F. Hill has bought out Charles F. Manahan, printer, Lowell, Mass.

James C. Angell, printer, North Adams, Mass., has sold out to W. J. Oatman & Co.

Vancise & Throop, publishers, Mount Pleasant, Iowa, have dissolved partnership.

J. K. Moore, publisher of the *Tribune*, St. Peter, Minn., has sold out to John D. Devor.

Samuel W. Wilder, paper maker, Lowell, Mass., is offering to compromise at ten cents on the dollar.

C. S. Jackson, publisher of the *East Oregonian*, Pendleton, Oregon, has admitted J. Wagner to partnership.

Geo. H. Parsons has retired from the firm of Dunham & Parsons, printers, Portland, Ore. F. A. Dunham & Co. continue.

Willy Wallach shows an elegant line of porcelain plaques, paintings on wood, mathematical goods, inks, copying books, &c.

Frederick Gay & Co., dealers in subscription books, New York city, have dissolved partnership. Frederick Gay continues under the old style.

Fred. W. Flower and H. C. McClelland have succeeded H. C. McClelland & Co., wholesale and retail booksellers, Columbus, Ohio, retaining the same style.

All of the cards described in last week's issue of THE STATIONER, as shown by Willy Wallach, are manufactured by that firm and are intended for valentine and Easter purposes. The trade ought to see the samples now with the travelers on the road.

The "Gravity" scales, manufactured by the Fulton Gravity Scale Company, 161 Central avenue, Cincinnati, and for sale at the company's different Eastern agencies, is something in which every stationer ought to be able to do a good trade. Send for price list.

Langfeld, Turner & Andrews, the great Philadelphia manufacturers of leather goods, have more orders just now than they can fill; they are absolutely crowded. Although their facilities for manufacturing are large, it is difficult to understand how they will be able to supply all of the demands of the trade. Their pocket-books with drawers have an immense sale.

W. H. Journeay, paper dealer, No. 1 Reade street, is captain of the New York Lacrosse team, which will play a match on Saturday afternoon at the Polo Grounds with a team of Indians from a settlement near Montreal. As the latter are genuine Indians, and not painted up for the occasion, considerable interest is shown over the event. Some of the trade have expressed their intention of attending.

McCann & McCloud, printers, Philadelphia (Germantown), Pa., have dissolved partnership. Horace F. McCann continues.

J. H. Graves, dealer in notions, White Hall, Ill., has been burned out; insured.

The Chicago Picture Company reports the sale of its comic set cards, called "I'm the Bride," as immense. The trade not yet handling them are invited to do so without delay. Its four new sets will be out shortly, and the "boom" inaugurated with the "Brides" will be kept up with added interest when these new ones come on the market. The art photographs, just published by the company, comprise photographs of art nudes, musicians and artists of note, and photographs of paintings by celebrated artists. These are mounted on a rich brown mount, with gold bevel edge, and the title of picture is lettered in gold. These are said to be salable goods, and most of them different from anything now on the market. A sample dozen of these photos will be sent the trade on receipt of $2.

Duncan A. Grant has retired from the firm of Grant, Cunningham & Co., dealers in notions and fancy goods, St. Louis, Mo. Cunningham & Schmitt continue.

Bateman, Hooper & Co., dealers in printers' supplies, Baltimore, Md., have dissolved partnership.

Mrs. M. D. Mattison, dealer in fancy goods, Canandaigua, N. Y., has sold out to M. G. Lawrence.

A. J. Hill, dealer in notions, Decatur, Ind., has been burned out; his loss is $500.

Daly & Hughes, paper dealers, Washington, D. C., have dissolved partnership.

Rhone Brothers have bought out the printing business of J. J. Saville, at Kearney, Neb.

An ingenious apparatus for recording the total duration of rainfall in the course of a day or a still longer time has been devised by M. Schmeltz, formerly professor at the Lycée de Lille. It consists of a box having a rain funnel in its top, by which the rain can enter and drop upon a band of traveling paper which passes below within the box. This paper is the usual Morse strip treated in a solution of sulphate of iron and dried carefully, then brushed with tannic acid or powdered cyanoferride or potassium mixed with rosin. A roll of it is placed within the box and is unwound onto another roller outside the box. The latter is driven by a chain from the hour hand of a common clock, so that it rotates once in an hour. In this time, therefore, the paper has been pulled along beneath the rain funnel a length equal to the circumference of the roller. The falling drops dye the paper and indicate where the rain began and left off. Correction is made for the increasing diameter of the winding roller as the paper is wound upon it. The instrument is said to work well, and to indicate fine showers, which are lost upon the ordinary pluviometre.

A GENTLEMAN COMMANDING CAPITAL well acquainted with the Stationery, Fancy and Dry Goods trade throughout the country, desires to enter some established house where his acquaintance and capital will be of use. Address, CAPITAL, office American Stationer.

THE UNDERSIGNED WISHES AN ENGAGEment with a First-class Book and Stationery House, Fancy Goods or Toys, either on the road, or will take management of either branch, in which he has had fifteen years' experience. Address R. A. GRIFFITH, Stationer, Des Moines, Iowa.

WANTED.—A COMPETENT AND TRUSTWORthy traveling salesman, to represent a line of goods for a first-class book house. State the number of years' experience and with whom. Give references and salary expected. Address B., at this office.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, SEPTEMBER 21, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THERE is a good, healthy trade in progress, not only at New York, but at distributing points East, South and West. Our correspondents indicate this quite plainly in their letters. Abundant crops, with "lots" of business and "peace within our borders" make this a good thanksgiving year.

MUNICIPAL authorities in various parts of Germany have interdicted the use of old newspapers and manuscripts for wrapping up food. This action has been taken for sanitary reasons. The principle is good, and the effect is better. It acts as a stimulus to trade in a certain line of paper production, and might be advantageously adopted here.

AN inquiry from a reader of THE STATIONER, given under the usual head, discloses the fact that the stationery trade is not entirely dead to the advantages of an export business. When a subscriber applies to us for information whereby to reach the South American and Mexican markets, we gain encouragement in our efforts to urge the importance of pushing trade to the remotest points. Of course, we shall do all that we can to aid in promoting the ambitions of those who seek unaccustomed channels of trade and want pilotage on the way. Let others follow the example thus set. It was remarked in our presence last night that when foreign manufacturers take to counterfeiting or imitating American goods, there is a sure guaranty for our control of markets where such imitations are sent. The logic of this remark seems to us to be forcible and axiomatical in its truth. Imitations of American stationery goods of all kinds are offered for sale in many markets which we have scarcely tried. We ought to profit by this experience.

THE *Papier Zeitung*, Berlin, prints an interesting report on the altered condition of the lead-pencil manufacture in Germany. The duty levied on lead pencils in other countries—as our own—where their production has assumed importance, has, it seems, operated very disadvantageously to the German trade, and while the German manufacturers can make and are producing as good pencils as ever, they seem to feel that they are not only heavily handicapped by the duties so imposed upon them, but by the duty which they have to pay on cedar imported as a raw material into Germany, and a not commensurate duty on lead pencils. The result has been, it is alleged, to discourage some of the manufacturers, even if the leading makers have not suffered to an appreciable extent. The lead pencil interest in Germany, therefore, seems to be disgusted with the fiscal policy of the government, which fails to accord it sufficient protection from foreign competition at a time when it has imposed an additional burden upon the industry. There are many anomalies in the German tariff and in precedents fixed under it. The German trade are only experiencing the discomforts which it takes time and common sense to rectify, and it may be presumed that changes will be made to do away with the abuses and perfect the uses of the German tariff.

Communications.

The Pen Count.

BUCKINGHAM BUILDINGS, GEORGE ST. PARADE, BIRMINGHAM, England, September 8, 1882.

To the Editor of The Stationer:

There is a very simple explanation of the short count in pens, about which so much has lately appeared in the stationery trade journals.

It can hardly be supposed that in a factory issuing many thousands of grosses of pens per week each box could actually be counted. It would require a small army of girls to do it, and would be fatal to all profit.

The plan adopted in my own and other pen warehouses is to have two or more careful and reliable persons at the head of the boxing department, whose duty it is each to count one gross out of every lot of 100 or 1,000 gross, as the case may be. These are weighed against each other as a test of accuracy, and all of the rest are weighed from these and placed in their boxes with astonishing rapidity. It follows that if an initial mistake in count is made (a most rare thing), the error is repeated throughout the whole lot.

Some such blunder must have led to the charges somewhat too hastily made against the pen trade. JOHN HEATH.

A WELCOME HOME.

Howard Lockwood, proprietor of the Lockwood Press and publisher of this paper, returned from Europe on Sunday by the White Star steamer Britannic. He had been absent four months, and the members of his staff determined to give him a welcome home. This took the form of a dinner, which came off at the Hotel Brunswick last evening. The menu was in keeping with the character and renown of that fashionable resort, and the floral decorations were elegant. A feature of the evening was the presentation to Mr. Lockwood of a handsome album in russia leather, containing the photographs and autographs of gentlemen constituting the staff of the Lockwood Press.

ANSWERS TO CORRESPONDENTS.

A. & V. want to know who makes colored engine-sized papers others than ——.

Ans.—No one makes them specially. Any manufacturer of engine-sized paper will make colors to order. We can refer you to the Syms & Dudley Paper Company, and Crocker Manufacturing Company, Holyoke, or J. B. Sheffield & Son, Saugerties, N. Y.

W. asks for name of a good manufacturer of white and colored tissues in rolls.

Ans.—Diamond Mills Paper Company, New York, office 44 Murray street.

Subscriber asks: Where are headquarters for 1, Sprague pens; 2, Pratt's "Commercial" pen No. 500; 3, Merritt's "Pig" pad; 4, Sanson's Magnesium pens; 5, Small brass spring perforators for McGill's paper fasteners.

Ans.—1. Formerly controlled by Sprague, of Albany, now out of business. Not now known in this market. 2. Don't know any Pratts, No. 500. Perhaps No. 522 controlled by Pratt & Farmer, 27 Thomas street, N. Y., is what is wanted. It seems likely. 3. H. B. Merritt, 131 William street, N. Y. 4. Henry Bainbridge &

Co., N. Y., can furnish. 5 Holmes, Booth & Hayden, 49 Chambers street, N. Y., manufacturers.

F. S. T. wants to know where to get a list of leading book and stationery houses in South America and Mexico.

Ans.—We don't know of any such list. We might supply you with names from our subscription books and other memoranda. We'll see about it.

FIXING COLORS ON POTTERY.

The art of fixing colors on pottery, M. Lauth tells us, differs essentially from that which deals with the coloring of any other medium. There is required in the materials perfect adhesion, absolute resistance to atmospheric influences, and a brilliancy which will make the colors seem a part of the object itself. As the colors must be subjected to a very high temperature, there must be eliminated from the palette of the ceramic artist all organic coloring matter, and all the unstable mineral colors; he must have recourse to oxides, metallic silicates, or to metals. And the fixation of these colors is always the result of a chemical action, of a combination which takes place at a high temperature, between the body of the porcelain and the matters used in its decoration. Many different methods are used for the purpose, but they are divided into two great classes—decoration at great heat and the decoration by muffle, an oven of a special kind. The former consists in applying to the porcelain coloring substances, which are fixed and developed at the same temperature as that at which the porcelain is baked; this is how the most valued results are obtained; as the enamel covers the color it assumes an extreme brilliancy and depth—it becomes part and parcel of the object itself. This is how the magnificent blue of Sèvres is obtained, as well as certain browns and blacks, and a few other combinations. The colors may be either mixed on the paste or put upon the object when molded, before enameling, or mixed on the object itself when complete; they may be also applied to porcelain already baked, which may be again baked at the higher temperature. This is notably the process employed at Sèvres for the blues. One of the most brilliant varieties of decoration at high temperature consists in what is called the process of *pâtes d'application.* This method consists in painting by the brush on porcelain unbaked or heated; by successive and carefully adjusted applications a very great thickness is attained, by sculpturing which the artist can give the decoration a remarkable finish and value. The object is then heated, enameled and baked. It is different with the decoration accomplished by means of a muffled oven; in this method the painting is always made on baked porcelain, and consequently on enamel, and the heat is comparatively low. In this process there is necessary, in order to make the colors on the metals adhere, a medium which is called the *fondant;* it is generally a silicate of silicate-borate of lead. By raising the temperature these bodies are fused, attack the object, combine with it, and at the same time determine by that reaction the adhesion of color. According to the nature of the *fondants* and colors, a greater or less heat may be applied, and as certain colors are more sensitive than others, it is frequently necessary to bake at successive fires of different temperatures. The baking of colors by this process requires very great experience; the absence of any instruments of precision is greatly felt, and there is no other means of ascertaining the temperature that prevails in the muffle than to observe on samples of porcelain the changes of color which are undergone by certain preparations very sensitive to differences of temperature.—*Nature.*

THE FRENCH POSTAL SERVICE.

M. Cochery has published the statistics of the French Postal and Telegraph Service. The total number of letters which passed through the post in 1881 was 1,350,000,000. In 1877 it was but 865,000,000. Newspapers have risen from 219,000,000 to 354,000,000; other printed matter from 161,000,000 to 297,000,000, and so on. Post-cards have not increased. They numbered 32,800,000 in 1881. It must be remembered that the French inland post-card, like the foreign one, costs a penny, and that the inland letter unit is three halfpence, so that the saving by the post-cards is but small. The service for collecting bills, started in 1879, has increased in the values of the total sums collected from 6,700,000 fr. to 48,000,000 fr. The Parcel Post Service opened in May last year, has also given very satisfactory results. The number of parcels forwarded in May was 349,600; in August it was 410,100; in November, 666,700, and in December, 808,700.

SEEING AND SIGNALING.

M. Charpentier tells us that the time elapsing between a person seeing a signal and being able to repeat it with his forefinger is about thirteen-hundredths of a second. With some people the interval is twice as long, but the above may be taken as the average. M. Charpentier terms the interval in question the "duration of luminous perception," and he measures it in a very ingenious manner. A black disk is set revolving at a given speed, and the observer faces it, having under his finger an electric key. There is a small opening or window in one part of the disk, and when this comes round opposite the observer he sees a light shining through it. Immediately he presses the key and an electric signal passes to the revolving disk. The disk is stopped, and the distance between the window and the record of the signal being measured furnishes the result. The distance between the two points on the disk is, of course, easily turned into time, since the disk was revolving at a known speed.

Alden Winch, for many years a prominent wholesale and retail newsdealer in Philadelphia, died on Sunday at the Continental Hotel, aged sixty-six years. He was the publisher of the *Flag of Our Union*, a literary paper, which at one time had a large circulation.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, September 20, 1882.

THE MONEY MARKET.—Financial affairs are improving. True, the local bank reserves are reduced to a low ebb, but there are indications that they will be higher before they are lower. The rates for money are strong, varying from 6 to 8 per cent. The stock market has ruled comparatively quiet, and prices, as a rule, are lower, due largely to the realizing by those who have long been waiting for prices to reach a point where they could unload without loss. Government bonds are generally quiet and without material change. Railway mortgages are generally weak and lower, in sympathy with the share list. The foreign exchange market is easier and rates have declined so that there is no longer any apprehension that we should be called upon to ship gold to Europe.

THE PAPER MARKET.—The demand for lots from store has had no improvement from that reported last week, the business at present being of a very spasmodic nature and almost as variable in its course as the weather, but in the aggregate, including outside orders for goods to be made up, most of our city houses make a very fair showing, although not quite so favorable as many had expected several weeks ago at this stage of the season. Print papers hold to a very steady basis of values, but low-grade wrapping manillas are very weak, particularly bogus. Prices of straw boards have very little strength, and, in fact, there are no regular prices ruling the market, our quoted figures admitting of a concession of at least $5 per ton on steam-dried stock. The manufacturers have been running on half-time since June 10, which has left the market in a comfortable position so far as stocks are concerned, but it is thought that they will now start up again, with the result that there will soon be no standard prices, and that they will endeavor to get the most they can for their goods. In short, the outlook for steam straw boards looks "blue."

THE STATIONERY MARKET.—Although the regular fall trade is now pretty well advanced, and the heavy wholesale jobbers generally have made the greater portion of their purchases, there are still large quantities of goods going forward to the principal distributing points, and the volume of transactions continues to foot up quite large. Mail orders are as large as ever, and come in quite freely for all classes of goods. Already considerable inroads have been made in the stocks of many of our large houses, and in some of them lines of assortments are beginning to be broken; but there need not be any apprehension of a scarcity of goods, as the trade expected a heavy season's business, and prepared their stocks accordingly. Additional impetus has been given to the fancy goods trade during the past week. Cards for the valentine and Easter season are now being placed on the market, travelers already having samples with them. The designs shown and those in course of preparation are a great innovation on anything heretofore brought out in these lines. A leading feature in their make-up are porcelain flowers, in imitation of natural. They have durability to recommend them, and some of the samples shown us are almost a reproduction of nature. In this connection we will mention that porcelain flowers will be a feature this season in many of the styles of the finest fancy cards. The prospects of an active trade to the end of the fall are everywhere regarded as encouraging. Staple goods continue in the main firm, no change in prices having been reported since our last.

L. PRANG & CO.'S NEW PUBLICATIONS.

The publications of L. Prang & Co. for the coming season are now in the market, and the firm's travelers are about to start out with them. The lines are very extensive and of great variety, and contain many new features, such as new wedding cards, New Year calling cards, and general congratulation cards, suitable for all occasions, which have never been offered before. The Christmas card line has been lately described in these columns, but from unfinished proofs, which only gave an indication of what the designs were to be. Now, however, the editions are complete, and the samples are perfect. It must be said that they come fully up to expectation, and the whole line as now presented cannot be too highly praised for delicacy, chastity and appropriateness of design, as well as for the care bestowed upon their reproduction.

To the series of Thanksgiving dinner cards a few new numbers have been added, suitable for the occasion and finely executed. These cards appear to grow every year in popular favor, and the demand steadily increases. Of large pictures a new piece is offered, called "Happy Childhood," after C. Doyer, of Paris; a charming face of a beautiful little girl.

Two fine new flower pieces, "Wild Morning Glories and Climatis" and "Hollyhocks," size 12x18, have been added to the line of flower pieces, and deserve praise for their truthfulness to nature.

A new series of the popular "Bits of Nature," after Miss F. Bridges, also merits special mention. It represents "Trees in Springtime," such as maple, willow, oak, alder, pine, larch, in Miss Bridges' familiar excellent style.

Of bouquets there are sixteen new designs by Mrs. O. E. Whitney and A. Lunzer in mats. These can also be had without mats as copies for panel printing, and make excellent copies indeed, largely used by amateurs as well as artists, and cannot fail to prove a valuable addition to the already very extensive line of copies offered by L. Prang & Co.

Some twenty new subjects have also been added to the line of heavy mounted gilt beveledged panels for the easels. Prang's new artistic plaques comprise a great variety, and cannot fail to become popular favorites for purposes of interior decoration. They closely resemble fine China plaques, but have the advantage over them of not being fragile. They are very heavily mounted, have a thick, glossy varnish, and a gilt border all around. The line consists of some seventy different subjects, including landscapes, figures, heads, flowers, &c., of great beauty and variety. The sizes are 8½, 10, 12 and 14 inches in diameter.

The new line of wedding congratulation cards deserves high praise, and dealers should supply themselves with a stock of these. They are intended to be sent to the newly-wedded couple by their friends as an expression of their good wishes, and are admirably suited to this purpose. They are cards designed and made for this purpose, the flowers, backs, fringes all being selected to suit it, and thus they are distinctly wedding cards, and not, like many cards now in the market, of a general nature, meaningless, to which any kind of lettering may be attached, and which may answer for a birthday as well as for a Christmas or any other card, but which really is neither.

No. 01 D is in book-form fringed, and has a delicately tinted ornamental cover, with lettering: "With the kindest wishes of," with space left for the sender's autograph, and another space in the

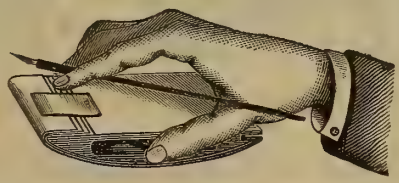
lower border for the date. The inside pages contain poems selected from Horace, Longfellow, and others befitting the occasion, and floral designs emblematical of marriage, such as orange blossoms, white roses, white pink, lily of the valley. No. 01 D F is the same series, also fringed, but mounted in heavy mats, and of richer appearance.

Nos. 02 and 03 show suitable floral bouquets on light tinted ground, and can be had single, single fringed or double fringed. Their back is most delicate and pleasing, and will greatly add to their salability. No. 036 D F is a large upright card in book form, fringed, consisting of four pictures set in mats, such as flowers, landscapes, sea views, &c. A leatherette protector is attached to the card with silk cord and tassels, and each card is in an envelope and packed in a neat box. The line extends up to No. 080 F, but want of space prevents a detailed description. Suffice it, therefore, to say, that all of the series are suitable and excellent; that most of them can be had single, single fringed and double fringed; that some are printed on satin set in mats with cord and tassels for suspension, and that detailed descriptive price lists of them are now ready and sent to all dealers upon application. No dealer should be without these goods.

Prang's birthday line is also much enlarged, many new series having just been added. Last spring the numbers ran from No. 1 to 64, and the new additions now number from 65 to 80. Most of these, too, come single, single-fringed, double, double-fringed, or in mats for suspension. The designs are fine and appropriate, the execution excellent, and the usual care has been given to the finishing touch. The line is too extensive for detailed description here, but shall be again referred to in a future number. In the meantime dealers who feel interested in these goods should apply for price lists, which contain all the necessary information and description. Most of all these new goods are now ready for delivery, and the house confidently expect to commence shipments early in October, hence orders should be sent in as soon as possible to insure prompt attention.

He who proposes to be an author should first be a student.

NOTICE.



A Wholesale House dealing in Book, News, Flat Papers, &c., wishes to secure the services of one or two good men upon the road. Applications sent to "Wholesaler," care Western Office, Lockwood Press, 8 Lakeside Building, Chicago, will be duly forwarded.

THE reputation of the Author is sufficient to guarantee a very large sale, and Mrs. Dorr has received contributions for the Souvenir from well-known writers, among which are Paul H. Hayne, Constantine E. Brooks, E. C. Stedman, J. J. Piatt, R. H. Stoddard, Henry R. Dorr, Mrs. Mary E. Bradley and others. The above cut gives the shape (but not the size) of front cover. Size, 9¼ × 5¼ inches. Both front and back covers are Lithographed in **Nine Bright Colors and Embossed,** so that the cut gives but very faint ideas of the beauty of this salable novelty. The inside 12 pages, printed in two colors, on tinted paper are all cut out the shape of Santa Claus. Price of this Gem only 50 cents. Sample copy mailed any DEALER on receipt of price. We solicit correspondence with dealers who wish to handle the Souvenir in their section. It is not a book, but a novelty that every Stationer, Bookseller, Fancy Goods and News Dealer can sell. We can deliver large quantities in New York City. It will sell in every State in the Union for the beauty of the work, reputation of author and popular price. Liberal Discount to Dealers. Address, **TUTTLE & CO., Publishers, Rutland, Vt.**

PHOTOGRAPHIC PAPER-WEIGHTS.

During the past six or eight months plain cubes of polished flint glass have been extensively sold as paper-weights, and many persons familiar with the difficulty of obtaining a considerable mass of flint glass tolerably free from air bubbles and from striæ have expressed surprise that such paper-weights could be sold at the extremely low prices demanded. Two sizes are in the market, one being about two inches across the face, and the other somewhat more than three inches. The cubes in question are doubtless pressed or molded, in the first instance, after which the six faces must be ground and polished. As the sharp edges of the cube beveled off there are no less than eighteen surfaces to be worked true and polished ; and it certainly becomes a matter for wonder that the article in question can be sold for a few pence.

The decoration of the lower surface of a glass paper-weight with a photographic picture is by no means new, as we have frequently seen roughly made and nearly hemphispherical glasses ornamented in this way. Such articles have generally a very common and unattractive appearance, owing to the distortion arising from the shape of the glass and the coarseness of the material. The cubical paper-weights now in the market, are so well shaped, and made of such excellent glass, that they lend themselves to the production of artistic and highly satisfactory results. But we consider it better to discard the primitive method of attaching a paper print on the glass, and either to make a collodion or a carbon positive on one face of the cube. As regards the collodion picture, no special precautions are necessary, but, as the ordinary camera and dark slide are not available, it is best to print on the sensitive collodion film directly from a reversed negative, two thin strips of cardboard being used to prevent actual contact between the wet film and the negative. It will be found handy to make use of an ordinary gas flame as a source of light, as the approximate parallelism of the rays serves to compensate for the circumstance that the negative and sensitive film were not in thorough contact. Either portraits or views may generally be vignetted with advantage, and an ordinary gold and acetate bath can be used for toning. A mere coating of varnish seves to protect the film, and over the varnish a layer of flake white paint may be applied.

It is, however, easier and more convenient to develop a cartoon or autotype print on the cube, and as the picture is to be viewed through the glass, an ordinary unreversed negative will be required. It is scarcely necesssary to say that all that the changes of temperature incident to the development of the carbon print must be brought about gradually in order to avoid fracture of the glass. In the case of the carbon picture, the white backing may either consist of flake white paint, or perhaps better still, of the phosphorescent paint which has recently been introduced into commerce. The most convenient way of using the paint, is to cover the surface of the dry carbon print with the thick portion which settles to the bottom of the bottle of luminous paint, and next to rub down on this a square of glass corresponding with the face of the cube. As soon as the edges are dry, all becomes firmly fixed, and the paper-weight is finished. One considerable advantage of the luminous paper-weight is the ease with which it can be found in the dark ; and as the photographic pictures still remain visible, they may serve as distinctive marks for each particular paper-weight. Instead of using the paint it is sometimes convenient to employ the mixture of phosphorescent sulphide of calcium and paraffin, as used by Mr. Warnerke, for making his sensitometer plates ; but in this case the cube must be warmed before its application. The sulphide of calcium paint cannot be used over a silver print with advantage, as the metallic image would soon become converted into sulphide. In order to vary the style of the photographic picture, backings of gold and silver bronze may be adopted, the powders being either mixed with a suitable varnish or melted with paraffin, as mentioned in the case of the luminous powder.—*Photo. "ABROAD."

Owing to the great success of **"At Home"** last season, we have this year issued the **New Art Gift Book—"ABROAD"**—for the Holidays; to be of uniform size and a companion piece of **"At Home."**

"Abroad" far surpasses its companion both in **Decoration and Illustration.** Each page being a study in itself. The quaint little English Children are in this Book represented on a tour of pleasure through France. Those who have been "Abroad" cannot fail to recognize the beautifully executed drawings of places of interest. The appropriate verses accompanying each illustration make this work a handsome memento and Holiday Gift. Decorated by THOS. CRANE. Illustrated by ELLEN HOUGHTEN.

Price, $2.50. "AT HOME" published this year at $2.00.

COBALT IN THE ARTS.

The application of ores of cobalt for the blue coloration of glass and porcelain appears to have been known and practised by the ancient Greeks and Romans, since the presence of this metal has occasionally been detected in ancient glass and ceramic wares. The general use of cobalt ores for the manufacture of smalt did not occur until about the middle of the sixteenth century, about which time the art was practised in Saxony.

The metal cobalt was first isolated and described as a new element by the Swedish chemist Brandt in 1873. It is closely allied to nickel in many of its properties, and its ores generally occur associated with those of the latter metal. Its chief ores are smaltine, an arsenide of cobalt; iron nickel, some specimens of which often contain as much as 26 per cent. of cobalt; cobaltine, or cobalt-glance, a sulph-arsenide of cobalt and iron; and cobalt-bloom, hydrated arsenate of cobalt. The ores of nickel invariably contain a greater or less percentage of cobalt. The preparation of pure metallic cobalt is one of the most delicate and tedious of chemical processes; and as our purpose here is simply to call attention to the practical applications of the metals (and especially of its compounds) in the arts, its metallurgy does not concern us.

The metal has a reddish-gray color, and is susceptible of taking a superb polish. It is less infusible than iron, but more so than gold. Like iron and nickel, it is magnetic, but does not lose its magnetism by heat. Its specific gravity is about 8.5. Its conducting qualities for sound, heat and electricity are about the same as those of iron. It is somewhat malleable at a red heat, when free from manganese or arsenic. It is quite unaffected by air and water at ordinary temperatures, but when intensely heated it burns with a reddish flame. It is only slowly dissolved by hydrochloric acid, but nitric acid or aqua-regia dissolves it readily. The solutions of cobalt salts have a fine rosy tint, easily recognizable when once seen. Cobalt has been found to make a handsome plating upon copper, brass and iron, rivaling or even surpassing nickel in beauty. Its cost, however, precludes the possibility—at least at the present time—of competing with nickel for this purpose.

Compounds of cobalt possess the property of imparting a beautiful blue color to glassy substances at a red heat. The important blue color known as smalt is made by fusing cobaltous oxide with silicious sand and potassium carbonate in crucibles, and pulverizing the resulting blue glass. This substance was formerly extensively employed for the blue coloration of paper, linen, &c., but now mainly limited to enameling and glazing. A very impure cobaltous oxide is made by roasting smaltine, or cobaltine, mixed with silicious sand, and comes into the market under the name of "zaffre." It is also employed for the blue colorative of glass and porcelain. Therard's blue is prepared by mixing alum with a cobaltous salt, and precipitating the mixture with sodium carbonate, or by decomposing the aluminate of soda by means of cobaltous chloride. The precipitate is an intimate mixture of hydrate of alumina and hydrated oxide of cobalt. After being well washed, dried and heated, the resulting blue pigment bears a close resemblance in color to ultramarine. It is indifferent to acids, alkalies or heat, and is used for staining glass and porcelain and for oil and water colors.

Coerulum, another blue color, is a mixture of cobaltous stannate with stannic acid and gypsum. It is likewise unaffected by heat, or by acids and alkalies.

Riemann's green is a compound of cobalt and zinc, made by precipitating with sodium carbonate, a mixed solution of white vitriol (zinc sulphate), and a cobaltous salt. Cobalt yellow is a mixture of nitrate of cobalt and potassium, made by passing nitrate vapors through a solution of cobaltous nitrate to which potassic hydrate has been added.

A remarkable series of compounds of cobalt with ammonia has been observed and studied by Genth, Fremy, and others.

The employment of cobalt salts in the laboratory for the detection of manganese, alumina, zinc, &c., by means of the blow-pipe, is very important to the analyst. The sensitiveness of cobalt salts to heat and moisture has been utilized in the production of sympathetic inks, which are invisible at ordinary temperatures, but are rendered visible and legible on heating. For this purpose, the cobaltous chloride, mixed with a small quantity of gum or sugar water, is well adapted. The "magic ink," as it is called, is rendered visible by holding it for a few minutes in the neighborhood of some heated body. It has lately been recommended as very suitable for postal-card messages, which would thus be exempt from curious inspection.

The sensitiveness of cobalt salts to moisture which is indicated by a change from blue to a pinkish tint, and vice versa, has been suggested and actually employed in the construction of a hygrometer, or measurer of moisture. In France, a recent scientific toy is a flower barometer, which is simply an artificial flower of white paper which has been impregnated with a solution of cobaltous chloride. These flowers, when exposed to the sun and dry air, become deep blue; but when the air is saturated with moisture they turn to a pinkish hue, thus affording an approximate estimate of the condition of the atmosphere.

Strips of paper saturated with this salt and made into various decorative and fanciful forms, are likewise in common use for a similar purpose. Landscapes have similarly been painted with cobalt and nickel salts, which, on heating, develop the characteristic shades of sky and grass.

The above facts comprise in briefly condensed form the chief technical applications of this interesting metal.—*Pottery Gazette.*

STATIONERS' SHOP FITTINGS.

The following suggestions, which we clip from an exchange devoted to other interests than ours, will be appreciated by our readers generally, because the advice it contains is of universal application.

The fitting up of the shop and the arrangement of stocks and samples is half the battle in disposing of your goods. During the past few years there has been a wonderful advance in this direction, especially in shops devoted to the retail trade. We do not refer to the handsomely fitted up buildings which are designed mainly for wholesale business; but to smaller shops where retailing only is the aim, which are as tastefully fitted, and whose effect upon the person entering is fully equal to any of our larger towns. There is one of these not many miles from London, which is in itself—apart from the goods it contains—a perfect gem. The counters, tables, cases and shelves are not expensive, but well adapted to the purpose for which designed, and presenting a most attractive appearance.

In fitting up the shop two points are to be studied in the arrangement: First, how to show your samples; second, where and how to put your stock. Of course the first is of the greater importance, for if your samples be well arranged and enticing, the stock will take care of itself; but, on the other hand, many a sale is lost because the seller does not know exactly what quantity of an article he has on hand, and owing to the mixed and inaccessible condition of his stock, cannot readily ascertain. In arranging tables and counters it is of the utmost importance that there should be an unobstructed view of the entire shop, so that the contents can be taken in at a glance. On this account the use of racks or pyramids upon the table is objectionable, as they shut off that portion of the shop which is on the other side where you may be standing. If you have not sufficient room without adding to your available space in this way, let them be put on the tables at the extreme rear or sides of the shop, and not on the centre tables, as by putting them in the centre, the shop is divided into two smaller rooms. Have all the tables and counters run the same way, and, if possible, let it be the largest way of the shop. If the ceiling of your shop is high, a very convenient arrangement can be made by building a balcony or gallery around three sides, reached by stairs and protected by a railing or balustrade. We have in mind now a shop fitted in that way, and the result is certainly satisfactory. Each place must have a different style of fitting, in accordance with its shape, size, position and many other details, and every table must be specially prepared with a view to the samples it is intended to receive. There need be no great outlay. Scarcely more expense is required to fit up a shop tastefully than is spent in conventional shelves and tables covered with a coating of white paint. A little study and thought will soon discover to you the capabilities in this direction of your place of business, and show you the plan best to follow in arranging it for use. Follow this plan. The result will justify what we have said, and recompense you for the very slight outlay of time and money it will cause.—*British and C. P. and Stationer.*

A SENSITIVE THERMOMETER.

Since Mr. Edison's invention of the microtasimeter which proved so sensitive to heat, satisfactory instruments for the measurement of extremely delicate changes of temperature have not been brought out. M. Michelson, of Paris, however, recently exhibited before the French Physical Society an apparatus in its experimental form which appears to satisfy all the requirements. The apparatus is based on the principle of bi-metallic thermometers, ebonite or hard rubber being chosen instead of one of the metals. Hard rubber is ten times more dilatable than platinum when exposed to heat, and a spring composed of platinum on one side and ebonite on the other will curve under the least increase of temperature. At the extremity of the spring is fixed a small glass stem forming an elbowed lever which rests against a small mirror suspended by a silk fibre. When the spring curves or straightens, as the case may be, the mirror is deflected, and a ray of light from a lamp reflected from its surface upon a scale moves up or down the divisions of the same. By giving to the spring and lever a relatively great length, the instrument can be made exceedingly sensitive, and the inventor expects to be able to measure the thousandth of a degree centigrade.

The stoutest heart loses hope under repeated defeat.

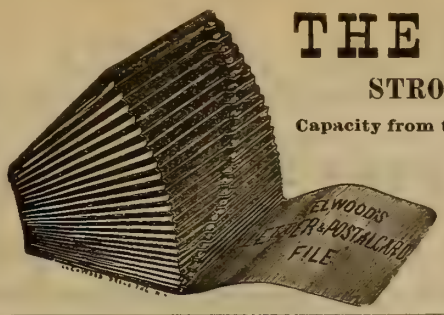
JOHN HOLLAND, Patentee and Manufacturer of Gold Pens, Pencil Cases, Fine Pen Holders, &c., **No. 19 West Fourth St., CINCINNATI, Ohio.**

JOHN MILTON'S BIBLE.

A Bristol bookseller recently catalogued a Bible which is assumed to have belonged to John Milton. It is a thick, rough calf quarto volume, being the Royal Version, Cambridge, 1637, and includes the Apocrypha. On the margin of the page containing the fourteenth chapter of First Maccabees is what appears to be an inscription of seventeenth century date: "Mr. Hartlibe to Mr. Milton sendeth the 12 booke of the Greeciane volumes & is obliged to hime. Oct. the 17, 1640, London." Hartlibe's friendship with the poet is well known, the "Tractate of Education," 1644, being addressed to Master Samuel Hartlibe. On the opposite margin of the same page, but in a different handwriting, and, apparently, that of the great poet, is the following :

When that day of Death shall come,
then shall nightly shades prevaile—
soone shall Love and Music faile—
soone ye fresh turfes tender Blade
shall flourish ore my sleeping shade.



J. MILTONIUS,
M. A. C. Coll.

Under these lines is a pen-and-ink outline portrait in profile, and below is written "Myself, 1640." On the margin of the opening page of Second Maccabees is the following manuscript note, beginning opposite the eighteenth verse : "London—perhaps ye reason why the Porsians worshipe fire to this day, 1639," this inference being drawn from the purification of the Temple, as explained in that verse, being conjoined with a command to keep the feast of tabernacles "and of the fire." On the title of the New Testament is "Johne Miltone, 16. A. M. 40." This bible in 1658 belonged to "Jane Bealby," in 1662 to "Wm. Lumley," in 1716 to "Dr. Todd," in 1744 to (General) "Loftice Todd," and then passed to the family of Gainford of Gainford. Lewis Gainford has written an account of the family on one of the fly-leaves, and sketched their arms. He joined the "True Christians," or Quakers, in 1775, and died insane. A former owner has had the volume lettered on the back "Holy Bible, e Libris Johannis Milton."—*London Atheneum.*

A NOVEL CLOCK.

The American Watch Company, Waltham, Mass., has recently completed a novel clock for the use of the Signal Service Bureau, at Washington. The case is made of brass, of sufficient height to allow the swing of a pendulum one metre in length. This case has been so constructed that the air can be exhausted, allowing the works to operate in a vacuum, and thus avoid atmospheric variations. An ingenious electrical attachment winds the clock as it runs, the spring being thus kept at a uniform tension.

The inventor of the "fusing disk," Jacob Reese, is credited with having expressed the belief that if it were possible to produce a flameless combustion, the intensity and quantity of heat obtained from a given amount of fuel would be very greatly increased thereby. Thomas Fletcher, of Warrington, Eng., has succeeded in producing a combustion without flame, and lately gave at Owens College a striking practical illustration of the new theory. He directed the flame of a simple gas blowpipe upon a three-inch ball of iron wire for a few seconds, and then blew out the flame. The heat rapidly increased and the iron quickly melted and ran into drops. He even succeeded in fusing refractory fire clay, the intensity of heat being much greater than ever before obtained with the fuel used. Even in the dark the burning of the gas was shown to be entirely visible. It appears that flame really indicates an imperfect combustion.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

THE GREAT ERIE RAILWAY,

LANDSCAPE ROUTE

OF AMERICA.

E. S. BOWEN, General Supt., New York.

JNO N. ABBOTT, Gen. Passenger Agt., New York.

BLUE PRINTING.

Some time ago, THE STATIONER gave the process for making "blue prints," but in answer to later demands, the following is given:

There are a number of processes that go under the name of "blue printing." The one most commonly used by machinists and others to multiply their drawings, is substantially as follows: A piece of unsized white paper is taken and made sensitive by means of a chemical wash, consisting of 1¼ ounces of ferro-cyanide of potassium, commonly known as red prussiate of potash, and 1⅜ ounces of citrate of iron and ammonia, dissolved in 16 ounces of water. This, when applied to the paper in a dark room, by means of a large and soft brush, imparts to the paper when dry a peculiarly rich, glistening, yellow surface. This paper when dry is ready for printing. If at this stage a fern leaf is taken, or a few sprigs of grass, or a feather, or any drawing executed on translucent material, such as common tracing paper, it may be perfectly copied in every minute detail within the space of four or five minutes. The object is simply laid on the paper and a piece of glass put over it to hold it in position, and then exposed to direct sunlight. The yellow paper then turns rapidly to a dull blue, then to a light gray, whereupon, at the expiration of about three minutes, it is withdrawn. But one thing remains to be done—the sensitive paper is given a bath of pure water, and a perfect copy of the fern leaf, grass or drawing remains behind on the blue surface of the paper, in white, as if traced by hand. The philosophy of the process is that the black lines of the drawing or the filaments of the grass or fern are opaque, and consequently refuse admittance to the light, which operates upon the open, sensitive spaces, causing them to undergo a chemical change. As utilized by railroads, iron companies, ship-builders, and architects and artists, however, in multiplying their many maps and plans, and even circular letters, the process becomes a little more complicated. Instead of merely placing the design to be printed over the sensitive sheet and leaving the rest to the light, large glass printing frames, such as are employed by photographers, are used, inside of which the drawing is placed, face downward, and covered with the sensitive paper. The frame is then locked by folding down a pair of hinged doors on the back, which holds the transparent drawing and the sensitive paper in close contact, and leaves the plan exposed to the light. A full bright sun is not absolutely requisite, but a longer time is required for exposure on a cloudy day.

BAMBOO.

In the Chinese Empire, south of Yantze, about fifty varieties of bamboo are said to grow, although five or six furnish the principal materials used. At Foochow and Swatow, the large size grow to forty or fifty feet high, and six or seven inches in diameter; on the island of Formosa it is found even larger. The bamboo serves 500 different purposes in China. The roots are carved into images, lantern-handles and canes; the tapering culms are used for every conceivable place where poles and ribs can be put; the leaves are worked into thatches, umbrellas and screens; cut into splints, the wood is woven into baskets, plaited into awnings, and twisted into cables; the shavings stuff pillows; other parts supply chop-sticks for eating, beds for sleeping, brooms for sweeping, pipes for smoking, fuel for cooking, skewers for the hair, paper for writing, rods for whipping, tables, buckets for water-drawing, and the tender shoots are said to be highly esteemed as a vegetable to be eaten.

BYRON WESTON

DALTON, MASS., U.S.A.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**

Each sheet is water-marked with name and date.

VOL. XII.---NO. 13. NEW YORK, SEPTEMBER 28, 1882. WHOLE NO. 379.

Correspondence.

CINCINNATI COLATURES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, September 25, 1882.

There is in Cincinnati an immense lithographing firm looking about for a site for a new building to afford it facilities for its work. It is the Strobridge Lithographing Company. It is now located on Race street, south of Fourth street, in a six-story building, and has the use of a four-story building adjoining. Two-thirds of the year, in order to turn off its work and meet the demands of its trade, it has to run day and night. Its work is principally theatrical. It runs twelve steam presses, four of which are Hoe's latest, largest perfection lithograph presses. Thirty crayon artists under Matt Morgan, and a dozen engravers constitute the art department, and somewhere near eighty persons are employed in the printing department. While the work turned off is principally theatrical, some commercial work is done. The chief object in seeking more room is to be able to avoid the necessity of working all night, also to meet the increasing demands made upon it. The salaries paid some of the artists are enormous. Only the best in their special lines of work can find employment here, and they command high prices.

The general trade in paper and stationery continues good here in Cincinnati. There were no special features during the past ten days to note. The flow of business is steady, and the volume is fairly large. In fact, three or four years ago it would have been considered both a boon and a "boom," but since 1879 trade has been so steadily good that people hardly know how to appreciate it. Paper went high in proportion to other commodities, but it doesn't seem likely to drop—rather the contrary, if anything; novelties and fancy goods are having a fine run. This is one of the symptoms and effects of generally prosperous industries and good crops.

"There is a lion in the street," so said Solomon's sluggard when he wanted a little more sleep, a little more slumber, &c. That was a long time ago, yet the lion is still in the street, and there is always somebody discovering that doleful fact. What is the lion in the street now that keeps the tradesman in doors under cover? "Why the frost may nip the corn before it ripens." There is no such lion in Kentucky. He was there a week ago, but he crossed over the Ohio, and he is now prowling around about parallel of latitude 40° and north thereof in the States of Ohio, Indiana and Illinois. If the frost wants to kill that lion let him stay away from these parts about a week, and the beast will be deader than a door nail. Even then there will be another lion in the street. That beast is immortal. What would the growlers and croakers do without him? There is apprehension for the safety of tobacco on both sides of the Ohio in case of frost, and, for that matter, fear for the safety of corn north of the Ohio. In less than a week if frost holds off there will not be any ground worth mentioning for such fear. In fact, while these words are penned, the danger is nearly, if not quite, past, and there is scarcely ground left to give stable footing to such a fear. Money here is plenty and easy. Collections have grown much easier in nearly every line of business, and hopefulness is characteristic of the tone of nearly every industry and of all branches of trade.

Oh, the Exposition! That had like to have been forgotten. Well, it has had in sixteen days 160,000 visitors, not counting admissions by complimentary tickets or exhibitors' and employees' passes. That makes 10,000 admissions daily on an average. The more one sees of this great display and the oftener one visits it the larger it appears. This year's experience sets at rest forever the clamor of the croakers who favored having expositions only biennially. The Lockwood Press display of trade journals and mercantile printing attracts much more attention from the general public than one would expect from an exhibit so technical and so entirely free from anything sensational in its character. Printers go into raptures over the typographical perfection of the journals. In fact, it is simply surprising to witness for an afternoon or evening the interest a general public takes in such a display. One expects a splendid jewelry case to excite admiration and to detain spectators. But the fact is that the most attractive displays in the Exposition are those of the products of useful labor, in which conscientious work and exquisite taste are exhibited. The great, grimy, mighty machines in Power Hall for working iron are beautiful in form, proportion and outline. They would have been as useful and much cheaper if made ugly, but they must be beautiful. Labor is queen in this age, and she demands adornment befitting her station.

J. R. Mills & Co., and Woodrow & Carpenter, A. H. Pounsford & Co., Wilstach & Baldwin, Bradley, Mallory & Webb, are having a rush in manufacturing mercantile stationery. In blank books, Van Antwerp, Bragg & Co., Carpenter & Co., J. R. Mills & Co., Woodrow, Pounsford, Wilstach & Baldwin, are having a trade. Robert Clarke & Co. have just issued a pamphlet which gives a history of the war of 1886, in which England humiliates the United States. The history is given circumstantially, but it hasn't proved to be a "lion in the street," scaring trade out of the highways. Of course, Chatfield & Woods, and Stewart and Snider's Sons, and Snider & Hoole, and Samuel C. Tatum, keep up selling large amounts at good profits. Any other supposition would be absurd, in fact unthinkable while there is any prosperity anywhere in this Western hemisphere. By the way, do you see what the Cincinnati manufacturing district is doing in the way of manufacturing blotting paper. Mind your eyes in the East, or your occupation will be gone in the manufacture of all fine grades of goods. John Holland is at home now, with his thoughts intent on getting all that is obtainable out of iridium, and of his wonderful discovery of a method of fusing and working that obstinate metal. PRINCE WILLIAM.

THE TORONTO EXHIBITION.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, Ont., September 22, 1882.

Our Industrial Exhibition of which I made mention in my last letter, closed on Saturday. In many respects it was considerably in advance of former exhibits. A much larger attendance with proportionately increased receipts. The latter leaves the management with a respectable balance in hand, which will be devoted to the improvement of the grounds and enlargement and increase of necessay buildings. The large inclosure with its numerous structures and tastefully laid out grounds, is one of the attractive features of our thriving city, and is easily reached by rail and street cars on the north and by steamers on the south, where the grounds are bordered by the lake. From the balconies of the main building looking eastward, a splendid view is had of the city harbor and island, and to the south and east the broad expanse of our noble lake. This year a new interest was added by having the main building and grounds illuminated with electric lights. This attracted large numbers of night visitors, but was rather hard on those exhibitors who had to go early in the morning and remain until after ten o'clock at night. The exbibition season is now in full blast, and for this and the following month there will be a continuous series in different parts of the Dominion. The Provincial Exhibition, inaugurated 1846, is now in progress at Kingston, and also the Agricultural and Industrial Exhibit at Montreal, which will be followed by the Western fair at London, and Central fair at Hamilton and Guelph, &c.

These annual shows, so long as they are well sustained, are admirable indications of progress.

The new ideas and improvements which have been developed in the meantime in manufactures, machinery, art, &c., are brought together and find an audience. Progress does not mean to hide its light under a bushel, but to lift it up so that so that all men can see, and it is this rubbing of ideas together, so to speak, that pushes the world ahead. The visitor of the last year's exhibit and the one just closed would have his attention arrested by numbers of altogether new things of Canadian make. He would have marked great improvement in every branch of our industries, and as he moved on from stall to stall would be forced to the conclusion that we are keeping step to the grand march of progress.

The Canada Publishing Company obtained the bronze medal for the best collection of school books. It also had on exhibition a series of well-executed maps of the various provinces of the Dominion and the Dominion as a whole. A. Barnes, an apprentice in the establishment, showed specimens of book-marbling done by him, for which he received an extra prize.

James Campbell & Son exhibited Christmas cards of Canadian scenes by Canadian artists.

Alexander, Clare & Cable, lithographers, had on view several fine specimens of their work. They obtained first prize for lithographic commercial work in black and colors, and a first prize for engraving on copper with proof. They also exhibited a sample of fine steel-plate engraving, introduced for the first time in the Province, which will obviate the necessity of sending out of the country for the finer class of engraving.

It would not be proper for me to go outside of the trade to notice exhibits, and indeed, if I felt so inclined, time and space would not permit. The affair is over, the crowds which thronged the streets for days have dispersed, the bunting which floated over streets and housetops has been pulled down, uncles and aunts and cousins have resumed their domestic cares, and we are moving on as we were wont to do aforetime.

The fall trade is opening up well, the wholesale people are full of orders, and everybody is happy. C. H.

TILES.

Of recent years the use of tiles for flooring or other building purposes has become more and more common, and as the art of decorating and furnishing our homes is attracting greater attention and becoming in reality a branch of art worthy the closest study, he who would supply his hallway or floor with a covering as beautiful as the remaining portions is obliged to accept these little slabs of pottery as being the only article combining in itself beauty and indestructibility. This necessity has, as is always the case, caused the production to be of the same character as the demand, and as a result we have in these little pieces some of the most beautiful specimens of the potter's art that can be found among the wares of any country or in any grade.

A tile is seemingly a very simple thing to manufacture, and there would appear to the casual observer very few difficulties to be overcome; but simple as it seems, a glance at the mode of making will show what a complex operation must be performed to produce them.

The plain or ordinary tiles are made from clay prepared as is usual in the manufacture of earthenware, but instead of being used in liquid state the clay is dried and ground to a fine powder. This powder is placed in metallic molds, and submitted to sufficient pressure in presses to retain its form until placed in the kiln and burned. By this means they are molded with great rapidity, an ordinary workman often stamping from fifty to sixty dozens in a day of ten hours. This process, however, is only applicable to the plain tiles, and it is the encaustic tiles which are more grnerally used and more interesting to study.

A serious difficulty to be overcome at the outset is the obtaining of clays which will shrink equally when exposed to the fire. As all encaustic tiles are made from two or more different clays, if one shrinks more than another the piece is destroyed; and as the shrinkage is very great, every care must be taken in the selection of the material to be used for this purpose. The red clay used by the Mintons in making their beautiful tiles is obtained by them at Cobhurst, about four miles distant from Stoke-on-Trent. This clay is used as the groundwork or body of the pieces, and has a facing or plating of finer clay applied to each side in which is put the ornamental design. This facing must be put upon both surfaces, for if the one surface alone be covered the unequal shrinkage will warp the tile and thus make it valueless.

This red clay after being brought from the mine, is allowed to "weather" or season by exposure to the air for about six months' time, when it is mixed with water in large vats and formed into a thin slip. This is strained through sieves made of fine lawn, and then allowed to evaporate until it becomes of the proper consistency for working. The "wedging" and "slapping" proceeds in the same manner as is usual in preparing the clay for making the finer grades of earthenware, and when all the air is expelled and the mass has become thoroughly welded together it is shaped into a cubical block of the dimensions of the tile. From this, slabs or slices are cut of the proper thickness by a piece of wire, and these form the body of the tile.

A coating of the finer clay is laid upon the top of these slices, and being protected by a piece of felt cloth, both are subjected to pressure in an iron box upon a mold having the pattern raised upon its surface or in relief. By this means the design is pressed into the soft clay, leaving depressions or indentations to be filled with clay of another color.

After coming from this press, another coating is applied to the reverse side in which is stamped the name of the maker, and rough places or holes to fasten into the cement, and it is laid away for a short time to dry. When sufficiently hard to bear handling, a thick slip of some color different from the groundwork is poured into the depressions on its face, so as to cover the entire surface, and after hardening for twenty-four hours the surplus is scraped off, leaving the pattern clearly marked by the colors of the clays. The tile must now be finished by hand and all roughness removed, corners made square, and the finishing touches applied. When this is ended it is placed in a warm drying room, and allowed to remain for a length of time varying from fourteen to twenty-one days, in order that all the moisture may be driven from the clay preparatory to firing in the kiln. They are then packed in seggars, several being placed in each one, and fired at a gradually increased temperature for about sixty hours. Six days are allowed for cooling, and the tiles are completed. As we have said, the shrinkage is very great, being equal to about one-eighth of an inch to each inch of measurement. An ordinary six inch tile is made to measure six and five-eighths inches before baking and loses the surplus in the kiln.

Some of the handsomer tiles are of very elaborate designs and covered with intricate ornamentation. These are mostly molded by hand, and are thus very costly, many different colors of clay being used and the most skillful workmen being employed in their manufacture.

Ordinary or plain tiles are often decorated by printing or hand decorations, and glazed and fired as in earthenware. These have much the same effect as the encaustic tiles, which they are not intended to imitate, but are not so durable, as walking upon them will in time wear away the glaze and decoration, leaving exposed the plain colored body beneath. The encaustic tiles being made from colored clays, considerable depth of surface may be worn away and the piece will still retain its original colors and beauty.

For vestibules or hallways of houses tiles are without rivals for utility and appearance, and their use is constantly extending as people are learning to appreciate their indestructible beauty. Many are also used for fire-place adornment, while not a few produced recently by some of the best manufacturers have been judged worthy a place among the plaques and pictures that adorn our parlor walls; and well entitled are many of them to the honor thus bestowed, as they can safely challenge comparison for real artistic effect with a majority of the paintings found in most homes. — *Crockery and Glass Journal.*

TO CEMENT MARBLE.

A cement that is highly recommended for joining marble or alabaster, is made as follows: Add ½ pint of vinegar to ½ pint of skimmed milk, drain off the liquor from the precipitated curd, and mix into it thoroughly the whites of five eggs well beaten, and sift in enough powdered quicklime (not slaked) to form a stiff, homogeneous paste; then apply to the seams to be stopped. This cement is said to harden rapidly, and to resist water successfully, though it will not stand much heat. A much stronger cement than this, if the color is not objectionable, can be made in the following manner: Take of litharge and red lead equal parts, mix thoroughly, and work into a paste with glycerine (concentrated) to the consistency of soft putty; fill the seam with this. This cement takes some little time to dry, but sets almost as hard as stone, and is water and fire proof. When once hardened, it is easier to break the stone than the joint.

Manufacturers of Rubber and Metal Stationery Specialties.

SOLE AGENTS FOR EXCELSIOR PENCIL SHARPENERS.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President. **DALTON, MASS., U. S. A.** JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show.

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS **LINEN LEDGER PAPER** Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

Being **Triple Sized** (a process entirely our own) and **Loft Dried**, can be erased and written upon the fifth time distinctly. None genuine without the water-mark, thus—**Old Berkshire Mills Linen Ledger**, and date.

CARSON & BROWN CO., Manufacturers.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U.S.A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

REGULAR QUALITY.

In handsome Light Blue Boxes containing one-quarter of a ream of Note Paper each, and bearing in blue letters description of contents.

In separate Boxes of uniform size, are one-eighth of a thousand Envelopes corresponding in tint and quality to the paper.

EXTRA QUALITY.

In attractive Lavender Colored Boxes containing one-quarter ream of Extra Fine Paper each, with contents printed in red. Corresponding to this, in like Boxes, are Envelopes to match.

All this Stationery may be relied on to be according to representation It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our **New York General Agency, GEO. B. HURD & CO.,** *79 Beekman Street.*

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

THE previous success of our Cards, it is confidently expected, will be fully sustained, if not increased this season, an expectation which is already verified by the large advance orders received, justifying our increased efforts to bring out a line superior to all our previous productions. Our line will again comprise Double and Fringed Cards as well as Heavy Mounts. All the Fringed Cards will be provided with protectors, and envelopes will be furnished for all cards costing $1.80 and upward. The names of the artists who have contributed designs are a guarantee of the excellence of our Cards. We will name only the following:

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,
MISS F. BRIDGES,
MISS ROSINA EMMET,
THOMAS MORAN,
ALEXANDER SANDIER,
R. G. BIRCH,
GEO. J. BARNES,
MISS DORA WHEELER,
MISS FLORENCE TABER,
FREDERICK DIELMAN,
HARRY BEARD,
F. SCHUYLER MATHEWS,
H. P. KENDALL.

The literary matter in connection with our designs has been carefully attended to, among others, by MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

PRANG'S PRIZE CHRISTMAS CARDS.

THIRD COMPETITION

FIRST.—Artists' and Popular Prize Card ($2,000), by Miss Dora Wheeler,
SECOND.—Artists' Prize Card ($500), by Miss L. B. Humphrey,
SECOND.—Popular Prize Card ($500), by Walter Satterlee,
THIRD.—Artists' Prize Card ($300), by Miss L. B. Humphrey,
THIRD.—Popular Prize Card ($300), by Frederick Dielman,
FOURTH.—Artists' Prize Card ($200), by Alfred Fredericks,
FOURTH.—Popular Prize Card ($200), by Miss Florence Taber.

WILLIAMSON'S MAGIC POLE

For taking down from high piles, or shelves, or putting up in high places, any kind of box having a projecting lid. Delivered to any point in the United States except the Pacific Slope, for $1.25. Liberal Discount to the Trade to sell again. Patented July 12, 1881.

WILLIAMSON'S GRIP TABLET.

The GRIP TABLET is a case to hold from 1 to 150 loose sheets of Note Heads, Letter Heads, &c., binding them at once into tablet form, or blocks, without the use of glue, paste or any other contrivance, which mars the beauty of a well printed sheet, and is no larger than an ordinary tablet, and is renewable; the sheets are simply drawn out. Inclose 25 cents for a sample any desired size.

J. H. WILLIAMSON, Patentee and Mfr., 2219 Gamble Avenue, ST. LOUIS, Mo.

THE BEST DIARY.

ECONOMICAL DAILY MEMORANDUM

·1883·

ANNOUNCEMENT.

WE present for approval the "Economical Daily Memorandum" in various sizes and styles, printed on good paper, strongly sewed and neatly bound, with leather backs and printed sides, also in full leather.

Besides a space for each day of the year it contains tables of the rates for foreign and domestic postage and money orders, valuable postal information, calendar and cash account for each month.

In addition to days of the week and month, the diary is numbered for the days of the year, a valuable improvement, useful for time calculations.

Dealers, whose trade does not warrant an investment of the considerable sum required to purchase an assortment of Diaries in the usual extended variety, will find a few dollars profitably spent in buying these goods, which come within the reach of all.

Dealers, already carrying a line of other Diaries, will find the "Economical" a valuable addition. Being made without flap or tuck they can be retailed at the price commonly charged for similar plain memorandum books, and therefore extend the sale to a different class of buyers.

We will be glad to furnish the trade samples at a reduced price. We solicit early correspondence in order that books may be received in time to make a selection and place an order for early fall trade.

Owing to the limited season during which Diaries are retailed, the demand must be anticipated by both jobbers and manufacturers.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW PATENTS.

No. 263,838. Envelope Machine.—James Ball, Holyoke, Mass.

No. 263,886. Globe.—Ellen E. Fitz, Somerville, Mass.

A globe provided with an outer and an inner horizon-ring and their semi-circular bands, one ring and its band being adapted to give terrestrial indications, while the other ring and band give celestial indications, both being capable of use at the same time.

No. 263,887. Knob for Exercising or Indian Clubs.—Edgar M. Folk, Brooklyn, N. Y.

No. 263,904. Adding Machine.—Christian W. Hergenroeder, Baltimore, Md.

No. 263,931. Manufacture of Glass Paper Weights.—William H. Maxwell, Rochester, Pa., assignor to Brown, Maxwell & Co. (Limited), same place.

Improved process for the manufacture of paper weights and other articles, which consists in covering vitrified paintings or designs upon glass with molten glass by casting or molding.

No. 263,932. Index Cutter.—William R. McCutcheon and William E. Chilcote, Washington, Iowa.

No. 263,961. Toy.—Edward M. Rich, Bristol, Pa.

No. 263,974. Picture Exhibitor.—George W. Shirk, Van Orin, Ill.

No. 263,983. Paper Scorer and Cutter.—Joseph Spooner, New York, N. Y.

No. 264,033. Hammock Frame.—Lyman E. French, Grafton, Vt.

No. 264,066. Toy.—William E. Crandall, New York, N. Y.

A toy obelisk composed of sections fitted together edge to edge, each section provided with letters of the alphabet, numerals, and hieroglyphics.

No. 264,084. Type-Setting Apparatus. — Louis K. Johnson, Brooklyn, N. Y.

No. 264,085. Type-Distributing Apparatus.—Louis K. Johnson, New York, and A. Augustus Low, Brooklyn, N. Y.

No. 264,088. Inking Apparatus.—William Lightfoot, Jr., Toronto, Ont., Can.

No. 264,091. Type Writer.—John S. Martin, Cherry Fork, Ohio.

An elastic revolving type-disk on the under side of a vibrating arm, secured to a spindle and operated by means of a hinged arm secured to a stylus.

No. 264,125. Toy Shooting-Gallery. — Wesley W. Barnes, New York, N. Y., assignor to McLoughlin Brothers, same place.

No. 264,131. Lead or Crayon Holder.—Claes W. Boman, New York, N. Y., assignor to Joseph Reckendorfer, same place.

No. 264,146. Automatic Retoucher for Photographic Negatives.—Emerson A. Gilbert, Meadville, Pa.

No. 264,148. Advertising Match-Box.—Chester Greenwood, Farmington, Me.

No. 264,170. Die and Stamping Press.—Frederick Kampfe and Otto Kampfe, Brooklyn, N. Y.

No. 264,175. Combined Paper File and File Holder.—John H. Linney, San Francisco, Cal.

No. 264,180. Method of and Machinery for Making Satchel-bottom Paper Bags.—Joseph McCullough, Philadelphia, Pa., assignor to the Union Paper Bag Machine Company, same place.

No. 264,224. Picture Frame.—James G. Batterson, Hartford, Conn.

No. 264,234. Book Rest.—Edwin J. Bonett, Thomas Gilfillan and Albert W. Flanders, Barnet, Vt.

A picture or other frame, each side of which is composed of a series of rolled metallic plates united at their ends and edges.

No. 264,236. Pencil Sharpener.—Hubert Burgess, Berkeley, Cal.

No. 264,258. Magnetic Toy.—Othello J. Dimmick, Fairbury, assignor of one-half to Chancellor L. Jenks, Jr., North Evanston, Ill.

No. 264,364. Method of and Means for Folding Paper.—Edgar B. Stocking, Washington, D. C.

No. 264,380. Newspaper Folding, Wrapping and Addressing Machine.—Reuel W. Waters, Newton Centre, Mass.

The papers are brought into position to be taken by the nippers by the automatic rising of the table on which they are placed. The nippers draw one sheet at a time under the first folding-blade, which forces it into the bite of a pair of rollers and onto a belt moving over said rollers, the belt then carrying the sheet over it and between two other rollers, which discharge it upon the already-addressed wrapper, which lies on a supporting guide awaiting the paper to be wrapped. The wrapper is fed from a web at the opposite end of the machine from that at which the paper enters, and as the wrapper moves along an address slip is cut from a web and pasted onto it. When the paper falls on the wrapper the second folding-blade descends and folds the two together into the bite of another pair of rollers, which force the package thus made into one pair of a series of pairs of rotating jaws, which in their rotation carry the projecting flap of the wrapper into contact with a paste-brush and against a guard which folds over said projecting flap on to the other part of the wrapper, the jaws in their rotation also pressing the package compactly together. When the jaws have performed about half a revolution the package is dropped into a receptacle, completely wrapped and addressed.

No. 264,383. File-Box.—Max L. Weiner, Cincinnati, Ohio, assignor to the Peerless Paper Box Company, same place.

No. 264,416. Toy Shooting Apparatus.—Alfred Reynolds, Brooklyn, assignor to Stirn & Lyon, New York, N. Y.

No. 264,425. Coin Separator.—James M. Quinn, Sedalia, Mo.

DESIGNS.

No. 13,290. Font of Printing-Type.—Charles E. Heyer, Chicago, Ill., assignor to Arthur M. Barnhart, Alson E. Barnhart, and Charles E. Spindler, same place. Term of patent, 14 years.

No. 13,292. Eyeletting-Machine.—Hymen L. Lipman, Philadelphia, Pa. Term of patent, 7 years.

No. 13,294. Advertising-Label.—Henry Pennington, Philadelphia, Pa. Term of patent, 7 years.

TRADE-MARKS.

No. 9,650. Gold Pens, Pen and Pencil Cases, Desk-Holders for Pens, Gold Tooth-Picks, and Similar Articles of my Manufacture.—Leroy W. Fairchild, New York, N. Y.

"The word 'Fairchild.'"

LABELS.

No. 2,759. Title: "Weston's First-Class Ladies' Note Paper."—William W. Whiting, Pittsfield, Mass.

MUCILAGE FOR LABELS.

Macerate 5 parts of good glue in 18 to 20 parts of water for a day, and to the liquid add 9 parts of rock-candy and 3 parts of gum-arabic. The mixed can be brushed upon paper while lukewarm; it keeps well, does not stick together, and when moistened adheres firmly to bottles. For labels of bottles it is well to prepare a paste of good rye flour and glue, to which linseed oil, varnish and turpentine have been added in the proportion of half an ounce of each to the pound. Labels prepared in the latter way do not fall off in damp cellars.

"CRACKLE" GLASS.

An ingenious process for producing glass with an iced or crackled surface, suitable for many decorative purposes, has been invented in France by Bay. The product appears in the form of sheets or panes, one side of which is smooth and glossy, like common window glass, while the other is rough and filled with innumerable crevices, giving it the frozen or crackled appearance so much admired for many decorative purposes. This peculiar crackled surface is obtained by covering the surface of the sheet on the table with a thick coating of some coarse-grained flux mixed to form a paste, or with a coating of some more easily fusible glass, and then subjecting it to the action of a strong fire, either open or in a muffle. As soon as the coating is fused, and the table is red hot, it is withdrawn and rapidly cooled. The superficial layer of flux separates itself in this operation from the underlying glass surface, and leaves behind the evidence of its attachment to the same in the form of numberless irregularities, scales, irregular crystal forms, &c., giving the glass surface the peculiar appearance to which the above name has been given. The rapid cooling of the glass may be facilitated with the aid of a stream of cold air, or by continuously projecting a fine spray of cold water upon it. By protecting certain portions of the glass surface from contact with the flux, with the use of a template of any ornamental or other desired form, these portions will retain their ordinary appearance, and will show the form of the design very strongly outlined beside the crackled surface. In this manner, letters, arabesque and other patterns in white or colored glass can be produced with great ease and with fine effect.

THE OLDEST NEWSPAPER EXTANT.

In accordance with the wishes of the Emperor Quang-Soo, certain important alterations have just been made in the *King-Pan*, a newspaper which is thought to be the oldest in the world, its first number having appeared in the year 911 A. D. At that time it was issued in a most primitive style, and at irregular intervals; but in 1351 it came out regularly every week, and continued to do so until the beginning of the present century, when it was transformed into a daily, at the price of two kehs (about the price of our *Echo*). By the new decree, it is ordered that the *King-Pan* shall be enlarged in size, and be issued three times each day. The morning edition is to be printed on yellow paper, and be devoted to commercial intelligence; the afternoon edition is to contain official documents and general news; and the evening edition, on red paper, will contain political and social articles and a summary of the news contained in the other two impressions. The contributors, of whom there are six, are all members of the Scientific Academy, and receive their appointments at the hands of the State. The paper has a circulation of about 14,000 per day, of which 8,000 is accredited to the morning edition. The price remains the same as in 1880 (one halfpenny), the State forbidding any increase being made, notwithstanding the improvements effected, and it is probable that in twenty-nine years' time when the *King-Pan* attains its thousandth birthday, other and more startling alterations will be ordered, and Pekin may rejoice in the possession of the most wonderful as well as the most ancient of all the newspapers in the world.—*Paper and Print.*

Statesmanship consists rather in removing the causes than in punishing or evading results.

Mrs. DORR'S LAST PRODUCTION,

"Santa Claus Souvenir."

NOT A BOOK BUT A NOVELTY FOR THE HOLIDAYS.

Something New, Rich, Neat and Novel. Each one in White Envelope; 25 in a Box.

THE reputation of the Author is sufficient to guarantee a very large sale, and Mrs. Dorr has received contributions for the Souvenir from well-known writers, among which are Paul H. Hayne, Constantine E. Brooks, E. C. Stedman, J. J. Piatt, R. H. Stoddard, Henry R. Dorr, Mrs. Mary E. Bradley and others. The above cut gives the shape (but not the size) of front cover. Size, 9¼ × 5¼ inches. Both front and back covers are Lithographed in **Nine Bright Colors and Embossed,** so that the cut gives but very faint ideas of the beauty of this salable novelty. The inside 12 pages, printed in two colors, on tinted paper are all cut out the shape of Santa Claus Price of this Gem only 50 cents. Sample copy mailed any DEALER on receipt of price. We solicit correspondence with dealers who wish to handle the Souvenir in their section. It is not a book, but a novelty that every Stationer, Bookseller, Fancy Goods and News Dealer can sell. We can deliver large quantities in New York City. It will sell in every State in the Union for the beauty of the work, reputation of author and popular price. Liberal Discount to Dealers. Address, **TUTTLE & CO., Publishers, Rutland, Vt.** BAKER, PRATT & CO., New York Agents.

With every order for 100 we enclose Electrotype Cut like above free. ☞ IT HAS NO COMPETITOR.

ENGLISH HAND-MADE PAPERS

ORIGINAL EYNSFORD MILLS,

WATER-MARK: "FELLOWS" TRADE MARK

KENT, ENGLAND.

These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers Lor Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.

Proprietor: JOSEPH ARNOLD, Eynsford Mills, KENT, ENGLAND.

Denver, Col.

GEO. W. GOODRICH,

SPRINGFIELD, MASS.,

—MANUFACTURER OF—

Illuminated Local Papeteries,

I have a large variety of Designs, and make to order Designs that have a Local interest, for any Town or City in the Country, and use same in corner of Note Paper, with name of Town or City printed on each sheet in Bronze Ink, and put up in boxes to match Envelopes, or Paper in ¼ Reams and Envelopes in ⅛-thousand boxes. Illuminated Local Papeteries are the great favorites over all Papeteries and Writing Papers of the day.

Any Dealer that has not received Sample Sheets of Designs for Local Papeteries can be supplied by writing for them.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

John V. Glessner, publisher, Mansfield, Ohio, is dead.

W. O. Wear, newsdealer, &c., Murray, Ky., has sold out.

H. Glaicke, printer, Denver, Col., has sold out to Darrow Brothers.

Mrs. J. K. Bethel, dealer in notions, Holton, Kan., is closing out.

Sarah De Mott, publisher of the *Mercury*, Oroville, Cal., has sold out.

C. M. Mellon, dealer in fancy goods, Benicia, Cal., has had his stock attached.

The stock of the *Times* Publishing Company, Oakland, Cal., has been attached.

The *Sunday Leader* Company, Wheeling, W. Va., has assigned to John S. Robinson.

J. V. Fitzgerald & Co. succeed Engle, Sachse & Fitzgerald, printers, Sauk Rapids, Minn.

S. H. Parker, publisher of the *Herald*, Holyoke, Mass., has sold out to Bridgman & Gray.

E. H. Hyde & Co., fancy goods dealers, San Francisco, Cal., have applied for relief in insolvency.

The capital stock of the A. H. Pugh Printing Company, Cincinnati, O., has been increased from $25,000 to $50,000.

Hayward Printing House (Matlack & Harvey), Philadelphia, Pa., is advertised to be sold out by the Sheriff on October 3.

The new provincial budget of Pernambuco, South America, imposes an additional tax of 30 per cent. on playing cards, jewelry and perfumery.

A. J. Holman & Co., Philadelphia, have issued a new catalogue and price list of bibles, photograph albums, &c., in new editions and styles. It is a useful index for the trade.

Fenn, Williams & Co., booksellers and stationers, Milwaukee, Wis., have dissolved partnership. W. H. Richardson retires; the remaining partners continue, the style being unchanged.

The Santa Claus Souvenir, published by Tuttle & Co., Rutland. Vt., is, it appears, a "this season's novelty." The statement that a certain number had been sold was intended, it seems, to refer to this month and not last September. It is advertised in another column.

Shorb & Boland, St. Louis, have issued a new trade catalogue of juvenile and miscellaneous books, fancy goods and stationery articles which they carry. This catalogue is handsomely illustrated, well printed on toned paper, red lined, and is very attractive. A steel plate illustration fronts the title page.

The American Tract Society has just published two sets of cards, which will attract attention. The most pleasing series is known as "Pictures from Palestine." These are well executed, and represent scenes on the Sea of Galilee, Jerusalem, the sites of Capernaum and Chorazin, and Jacob's well. An appropriate text from one of the gospels with a hymn verse accompanies each picture. The other series consists of twelve texts, the embellishments being vases of flowers, it being known as "Words of the Wise."

Ivison, Blakeman, Taylor & Co., are having a very large sale for their writing fluids in "miniature" bottles. These are said to be the cheapest stand inks in the market considering the quality. These fluids are of two kinds, extra black and blue black. The blue black fluid contains the same coloring matter as the black ink. The beautiful blue color, from the action of the air on the writing, turns black, and becomes as intense as can be desired. It combines three important qualities, fluidity, color and durability, and is absolutely reliable for all business purposes. The easy flow from the pen, beauty of initial color and perfect freedom from tendency to get thick render it superior to any similar preparation, and it is particularly well adapted for use in hot climates.

McLoughlin Brothers have just brought out several new toy books. Among them are two entitled the "Cruise of the Walnut Shell" and "Hans Thumbling." The first is a story of two children cruising around the world in a walnut shell, with illustrations of scenes peculiar to the different countries through which they pass. The other is a German story translated into English, and is somewhat similar to the "American Tom Thumb." Each contains thirty engravings, all of which, as well as the reading matter, are very interesting to children. The covers are richly and elaborately printed in a variety of colors.

M. B. Wright, a handsome young salesman, with Liebenroth, Von Auw & Co., went on a visit to Cincinnati last week, and got married to one of the handsomest and richest young ladies of that city; and on Saturday returned with his precious charge. Mr. Wright hails from Cincinnati himself, and is connected with some of its best families. His father was formerly mayor of that city. It is said that the wedding presents were rich and beautiful. The congratulations of THE STATIONER are extended.

Liebenroth, Von Auw & Co. will have ready early in October a new catalogue, which will contain a complete list of all their manufactures to date, with revised prices. It was compiled under the supervision of C. E. Hopkins, and it evinces much taste. It consists of 72 pages, is printed with new designs of type, and is one of the finest catalogues ever issued in the trade. It ought to be secured by those interested.

T. Sinclair & Son, Philadelphia, have just out a series of pictorial advertising blotters, dedicated to the editorial fraternity, which are quite funny and will meet with great success. They have also issued their new calendars for 1883. Some of them are very remarkable, especially the calendar for blank-book dealers and manufacturers, which is thought to be the finest ever published.

Dr. W. Reissig's cancelling ink, described on the first page of THE STATIONER of September 21, has, it is said, been patented in this country, the right to manufacture being controlled by a New York house. This notice is therefore given as cautionary.

The Powers Paper Company asks the indulgence of the trade in filling orders for its "Alligator books." After October 1 it will be able to fill orders promptly at its New York agency, 536 and 538 Pearl street.

Iwan Von Auw, of Liebenroth, Von Auw & Co., returned on Tuesday with his family per steamship Herder, from Europe, where he has been all summer.

The "Fall Announcement Number" of the *Publishers' Weekly* comprises 152 pages.

J. O'Connor, bookseller and stationer, Utica, N. Y., has been burned out.

W. A. Black, dealer in periodicals and notions, Pawnee City, Neb., is selling out.

Mrs. L. Armstrong, publisher of the *Republican*, Santa Rosa, Cal., has sold out.

N. C. Kenyon, bookseller and stationer, Chatsworth, Ill., has sold out to P. Stroyer.

The stock of G. S. Stoddart & Co., paper dealers, New York city, has been attached.

Z. F. Carn, printer, Harrisburg, Pa., has had judgment for $1,000 entered against him, and execution was issued.

Chas. S. Coburn, bookseller and stationer, Lawrence, Mass., has failed, and is offering thirty cents on the dollar.

Carter, Dinsmore & Co. took the first prize, a silver medal and four diplomas for their exhibit of inks and mucilage at the Montreal Exhibition, which closed on last Saturday.

W. A. Mansell & Co., 271 and 273 Oxford street, London, W., England, have lately published a series of texts, with floral designs. There are three sets, each set containing four texts.

Charles J. Cohen, Philadelphia, reports trade active in all of his various branches. Two or three shipments from England and the Continent are now weekly occurrences, and the large establishment is like a bee hive for system and activity.

Frank S. Thayer, 79 Franklin street, Boston, has brought out a new papeterie called "Mottled Ore," which is novel and taking, and is said to be having a great run. Mr. Thayer has also a very nice line of card albums in handsome covers; these can also be used as scrap-books.

Henry Levy & Sons' trade last week did not fall off in consequence of the inclemency of the weather. On the contrary, the firm was busier than in the week previous. The house accounts for its steady trade by the fact that it has popular goods and is offering them at popular prices.

For the first time this season a STATIONER reporter made a minute inspection of McCarty & Hasberg's stock of goods which are offered for the holiday trade. It is sufficient to say that the display of novelties and new goods is one of the most striking and beautiful ever seen in this market. To give a complete description of the exhibits would occupy more space than could be afforded. The following notice, however, will give an idea of what is to be seen. Among the exhibits is a very extensive line of brass goods, in odd designs, and which are copies of articles in the museums of Europe. These goods are artistic, useful and ornamental, and are suitable for cabinets, libraries and decorative purposes. In Vienna bronzes the firm shows a very large and elegant assortment, particular care having been given to the selection of goods specially adapted for Christmas presents. Articles in plush come in great variety, and include many new and tasteful ideas and real novelties not to be seen elsewhere, and which are offered at very low prices. Leather goods from all parts of Europe are displayed in a variety that has never been equaled. Artistic pottery from Oriental countries in all styles and designs peculiar to this clase of goods, and of the richest quality, is also exhibited. The attention of the trade is invited to the beautiful warerooms of this firm, which are located at the southeast corner of Broadway and Broome street, running through to Mercer street. They contain thirty windows, which admit the best light possible for viewing the goods. By this means buyers are enabled to

see at a glance the character of the articles offered.

A. H. Goetting is doing an immense business.

Wm. Chapman & Co., dealers in fancy goods, Laramie City, Wyoming, have closed out.

T. D. Van Valkenburg, dealer in notions, Maryland, Mich., has gone out of business.

Execution for $1,720 has been entered against A. A. Chase, publisher of the *Daily Times*, Scranton, Pa.

Luce & Mosher, booksellers and stationers, Caro, Mich., have dissolved partnership. W. C. Luce succeeds.

Execution has been issued against Wm. Crawshaw, paper dealer, &c., Harrisburg, Pa., on a judgment for $306. He started about a month ago.

Nathaniel Bloom shows a beautiful line of goods for the fall trade. Included in it are bisque figures, porcelain roses, plush goods, artificial flowers, fans in great variety, including rare articles in Russia leather and ostrich feathers.

The summer number of the London *Graphic* is crowded with illustrations in colors, and is an excellent specimen of newspaper typography and color printing. It indicates a great advance in newspaper enterprise, which may be profitable, and certainly deserves encouragement.

Execution for $3,000 has been issued against Hiram Young, publisher of the *Evening Despatch and True Democrat*, York, Pa. There are other judgments for $7,812 and two mortgages for $6,000 against him, making total debts of $16,812. His real estate, valued at $14,000, will probably be sold by the sheriff, but the personal property, including the two papers, will not be sold, as it is in his wife's name.

Some years ago Lee & Shepard began the publication of a series of illustrated hymns and songs, including such favorites as "Nearer my God to Thee," "Rock of Ages," "Home, Sweet Home," &c. This series has proved the most popular set of holiday annuals, probably, ever issued in this country. This year two new books are added—Tennyson's "Ring out, Wild Bells," with illustrations by Miss Humphrey, and Dr. Sears' "That Glorious Song of Old," illustrated by Fredericks.

Rosenbaum & Co., Philadelphia, have this year a splendid stock of stationery goods for the holidays. Their line of photograph albums, autograph and scrap books, is very extensive. They have a very large assortment of cabinet frames, gilded, sanded, painted, or in plush, velvet or pearl. The manufacture of mats is a specialty with Rosenbaum & Co., and they are remarkable as well for their price as for the taste with which they are made. The trade are advised to see the firm's samples before purchasing elsewhere.

Among the arrivals in the trade this week were: T. Fitzwilliams, of T. Fitzwilliams & Co., New Orleans; William H. Lawrence, of W. H. Lawrence & Co., Denver, Col.; Mr. Brown, of Brown & Pilcher, Jackson, Mich.; George C. Eyrich, of Eyrich & Co., Jackson, Miss.; M. Herzberg, West Point, Ga.; J. B. Lovelace, of J. B. & C. W. Lovelace, Marion, Ala.; Mr. Boughton, of Boughton & McCann, Hannibal, Mo.; John P. Morton, of John P. Morton & Co., Louisville, Ky.; Mr. Noyes, of Noyes, Brothers & Cutler, St. Paul, Minn.; Mr. Hornthal, of Hornthal Brothers, Plymouth, N. C.; Frank S. Thayer, of Cross Pen Company, Boston; Thomas H. Atwood, of Atwood & Sherburne, Boston, Mass.

The suit lately brought for the appointment of a receiver and for a dissolution of the firm of John B. Davids & Co., was this week discontinued by the withdrawal of Mr. Brennan, his interest in the concern having been bought in the interest of Mr. Davids. A new partnership will be formed in a few days and the business will probably be continued under the style of the old firm.

J. H. Bufford's Sons offer, this week, several new and beautiful designs in New Year calling and Christmas cards. Some of the former are richly illuminated, and in the shape of a palette and fringed, while many of the designs of the latter come in the form of wall-pockets, and are richly embellished. The firm's show-cases, as at present laid out, make an elegant display.

J. D. Osborne, surviving partner of the old newspaper firm of Prentice, Henderson & Osborne, of the original Louisville *Journal*, died suddenly on Sunday of heart disease, aged sixty-seven years, at Louisville, Ky.

The liabilities of S. B. Hutchinson, manufacturer of paper boxes, Springfield, Mass., are $3,583; the assets consist of machinery, store and fixtures, all mortgaged; his real estate is mortgaged for $6,500.

Harry G. Phillips has just returned with his usual number of good orders from a ten days' trip to Boston for Koch, Sons & Co.

Samuel W. Wilder, paper maker, Lowell, Mass., has liabilities of about $22,000, and assets of about $4,000.

Charles S. Coburn, book and stationery dealer, Lawrence, Mass., has failed.

Paul Buckler arrived home this week from a successful Western trip for Boorum & Pease.

J. P. Killinger, publisher of the *Record*, San Jose, Cal., has filed a petition in insolvency. Liabilities, $2,128; nominal assets, $1,850.

Boorum & Pease have taken precautions against fire by constructing fire escapes from each floor of their buildings on Reade street.

The National Printers' Warehouse Company, 18 Vesey street, reports that the sales of its presses are very satisfactory, and it has recently sent some to England, Chili, the West Indies, &c.

John Petrie, Jr., reports that the demand for the A. B. French inks has been so great that the large stock he lately received is now running low. However, in order not to disappoint his customers he has ordered another large shipment.

Daniel Alexander, formerly treasurer and agent of the Brookside Paper Manufacturing Company, but for several years past with H. C. Hulbert & Co., of this city, will connect himself with the Smith Paper Company, Lee, Mass., on October 1. Mr. Alexander has a large circle of friends in the trade who wish him every success in his new field of duty.

As pure and fresh country air gives vigor to the system, so do pure and fresh thoughts tend to invigorate the mind.

FOLEY'S PAT. IMPROVED STYLOGRAPHIC PEN.

Great reduction in price: No. 1, $1.75; No. 2, $2.50; No. 3, $2 50; No. 4, $3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, SEPTEMBER 28, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

NOTHING to add about trade this week. It continues good.

THERE are many novelties this fall, and it is surprising how new fancies are evolved each season.

REVERTING to the subject of artistic arrangement of shops and show windows, we want to suggest that a small stock, well selected, contains almost all of the elements for producing effects that will attract buyers. The contrasts of forms and colors should be a study for the shopkeeper, and ease, not stiffness, should be aimed at. It is not every one who has artistic inspirations, and it therefore becomes necessary to borrow ideas or to follow rules which may detract somewhat from the gracefulness of the display of goods. One of our English contemporaries some time ago made some suggestions as to how to lay out a stationer's window; but as stocks vary and goods are constantly changing, there must be variations, which, well carried out, will serve to give a fresh appearance to stocks. In many dry goods and fancy goods stores an accomplished window dresser is an indispensable adjunct of the establishment. Let the stationer make this a feature and try to create pleasing forms from the multifarious objects at his command. Perhaps it would be a good thing for the trade to exchange ideas. If any of our readers feel inclined to take advantage of the proposition, it would be a good thing to send to THE STATIONER lists of goods adapted to different requirements, and call for remarks as to their arrangement either in the window or on the counter. We will print such lists and also the suggestions that might be made, carefully withholding the names of parties too modest to declare themselves publicly or giving the addresses of those who are not averse to being known. What do our friends think of this?

WE have been asked whether it is legal to sign a receipt with initials only and not with the full name of the party admitting receipt of the goods or money. This question indicates—what is to us—a rather queer conception of what constitutes law. We cannot explain at length the differences between common and statute law, but it will be sufficient to say that the first is founded upon common sense and common usage and the latter is declaratory under legislative enactment. The construction of law is something that is left to the courts, whether the legal issue raised is one of common usage or statutory explanation. It will be found that commercial usage adopts the practice to a very great extent of affixing initials, *ad testificandum*, and bank certifications as well as business receipts are frequently so made. This practice even obtains in legal proceedings, where the judges of our highest courts frequently, if not generally, affix their initials to a document or order in token of their approval or coupled with the note of their action thereon. Thus it will be seen that the inquiry which has suggested these remarks is disposed of. It is not illegal to affix initials to a receipt. In fact, a receipt is not properly a legal document, nor can it become one until in the process of legal investigation it is introduced as evidence and *proved* or admitted. As written evidence it is superior to parole or verbal testimony, and yet it can be impugned and disproved if false or fraudulent. The only point of value that we can suggest as to affixing a full signature instead of initials to a receipt, is that whereas the initials narrow the line of proof and perhaps admit of more doubt as to the authenticity of the acknowledgment, the full signature is less liable to question, and in case of dispute is more certain in its declaration.

ANSWERS TO CORRESPONDENTS.

M. C. J. wants to know the address of the inventor of the "new bank check" (Security check), described in THE STATIONER of June 15, 1882.

Ans.—Edwin S. Loomis, Washington, D. C.

H. S. D. wants to know where to buy fringes for decorating Christmas cards.

Ans.—T. M. Simpson, 21 South Seventh street, Philadelphia; Julius Urban, 288 Bowery, New York; Joseph Reshower, 3 East Fourth street, New York; Hensel, Calliday & Co., 45 North Seventh street, Philadelphia.

Wood veneer is coming into use for binding. The books have cloth backs and wood veneer sides. The veneers are cut extra thin, and then treated in a particular manner which renders them tough and pliable, so that they can be turned in over the boards as neatly and easily as cloth or leather. T. Fisher Unwin's "Principles to start with" is a specimen of this novelty in the bookbinders' art.

PRINTED EARTHENWARE.

The reproduction of set designs by the process of printing, although not belonging to the highest form of art, is rendered necessary by the struggle participated in by all manufacturers who produce artistic merchandise as a marketable commodity. It is with these important that the goods shall not cost so much to produce that when they shall have passed through several different hands, each of whom adds his own profit to the price, its cost shall not be so high as to place them out of the reach of the consumer. This necessity has led to the use of printed goods, which combine in themselves to the ordinary observer all the effects of hand-work at a price only a fraction of that which painted decorations would cost.

Ten or fifteen years ago printed decorations were almost unknown, and the little that was made of this kind of work was almost entirely confined to English toilet ware, and even in this most or the decorations were only printed in part and the ground or filled part supplied by hand. Since then the system has become more general, and been applied to nearly every variety of ware or kind of sets made from pottery in any country. The style of ornamentation introduced by this way of decorating has caused a complete revolution in the popular taste, which now demands designs covering the surface of the pieces completely, instead of being only upon the border as was formerly in demand. The prime reason for using this kind of decoration was not its beauty, but merely to hide the ware from sight by a profusion of elaborate ornamentation, the material being of inferior quality, and but for its appearance and cost would be almost unsalable for table use. By means of these beautiful designs and the low cost of producing the goods, a perfect "boom" has existed for several years past; and although it is said by some that the demand shows symptoms of weakening, the number of tea, dinner, and toilet sets sold of this grade is simply enormous, and almost incredible.

Some account has already been given of the process of printing as applied to porcelain, but as the plan followed in producing printed decorations upon earthenware varies considerably, a few words of description may not be misplaced.

Nearly all the printed decorations are applied to the earthenware under the glaze upon the body or biscuit. By this means the expense of one firing is avoided, and the colors are made absolutely indestructible. In some cases the outline or main design is printed underglaze, and the color filled in with a brush over the glaze, but usually the entire decoration is applied before the piece is dipped in the glaze tub. For this reason the number of colors that can be employed in printing is limited to those that will stand the heat of the gloss kiln and are compatible with the materials composing the glaze. No flux is needed in the colors used in this way, as the only design of a flux is to cause the color to unite with the surface of the glaze, which is here unnecessary.

The vehicle or liquid to which the various colors are added consists of boiled linseed oil, resin, tar and oil of amber boiled together by a lengthy process, and after the coloring matter has been added it is liquified by spreading on a heated iron plate and used from this in covering the plates or stones containing the designs. These designs are cut by hand or etched in the same manner as for lithographic work on copper or stone, and the first cost is very expensive, a set costing sometimes a thousand dollars. To prepare a set of prints the design must be first selected and engraved. From this are made different cuts of various shapes and sizes to fit each plate, cup or covered piece upon which the decoration is to be used, and although the process is much cheaper than hand-work, where large quantities of a design are used its original cost is very great. One copper plate or stone will generally contain the entire series of a subject, which are printed in one large sheet and separated with a scissors afterward.

The process is as follows: The ink, while liquid from the effects of the heat, is applied to the copper or stone with an ordinary printer's roller, and the surplus ink removed with a knife or spatula. Its surface is then wiped clean with a cloth, the paper laid on it, and all together placed under a pressure which transfers the pattern to a paper in mineral colors. The deeper the cutting in the stone, the more ink it will contain, and the darker will be the imprint taken. The paper, before being placed under the press, is first softened with soft-soap, and well dampened in order that it may adapt itself to the rounded or irregular shape of the article for which designed, and also that the imprint may be clearer and more sharply defined.

Having obtained an impression of the design upon paper, the next step is to transfer the ink to the piece to be decorated. This is effected by laying the piece of paper while still wet upon the place to be ornamented, and rubbing it with a roll of flannel, gently at first, until the ink is well fastened to the biscuit. The piece is then plunged into a tub of water, and, after soaking for a moment, the paper is easily removed. Even this is often unnecessary, as the moist paper will readily peel off and leave the ink on the surface of the piece. The piece cannot be immediately glazed after the biscuit has been printed, but is first hardened in a heated room or oven; this not only thoroughly dries the piece, but burns the oil away and leaves the color only. It is needful that an even, uniform temperature should be maintained during this drying period. This is obtained by an ingenious contrivance which virtually makes the four corners of the room four flues or chimneys for distributing the draft.

Having been well dried in this room, the ware is glazed and fired in the same way as ordinary white earthenware.

One pretty effect is produced in printed underglaze colors by the use of what is known as flowing blue. This gives softness to the design, and is produced by introducing into the seggar a flow composed of lime and salt with a little nitre and borax.

There is no estimating the value to the art of potting of this simple, inexpensive way of producing beautiful decorations at reasonable cost. Through its medium, decorated ware is made to cost but little more than good quality of white, and even people of moderate income may have a decorated dinner set without conscience accusing them of extravagance.

The discovery of this art—for it is worthy the title—is credited to Dr. Wall, of Worcester, and all countries should join in benedictions for the invention.—*Crockery and Glass Journal.*

POLISHING WOOD-WORK.

Soft woods may be turned so smooth as to require no other polish than that which can be given by holding fine shavings of the same wood against them in the lathe. For polishing mahogany, walnut and some other woods the following formula is given: Dissolve beeswax by heat in spirits of turpentine until the mixture becomes viscid. Apply a clean cloth, and rub thoroughly with another flannel or cloth. Beeswax is sometimes alone used. For work in position, it must be melted and applied and rubbed as above. For work in the lathe, it can be applied by friction, the slight amount of wax melted being sufficient for the polish. The work should be thoroughly rubbed. Mahogany may be polished by rubbing first with linseed oil, and then by a cloth dipped in very fine brick dust. Some hard woods have a natural polish and do not require a polishing medium. A fine gloss can be produced by rubbing with linseed oil and then holding shavings or turnings of the same material against the work in the lathe. A very perfect surface can be obtained with glass-paper, which, if followed by hard rubbing, will give a beautiful lustre. Lustre can also be given to carefully finished surfaces by applying a small quantity of thinned varnish, shellac or "fillers" by a cloth and carefully and thoroughly rubbing.—*Comstock's Interior and Interior Details.*

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, September 27, 1882.

THE MONEY MARKET.—The money market still works uncomfortably close, the prevailing rates for call loans being 5@6 per cent., with Government bonds as collateral, and 8@10 per cent. on pledge of miscellaneous stocks. The discount rates of mercantile paper are 7 to 10 per cent., according to signatures. The stock market has been alternately firm and weak, with frequent but not very wide fluctuations. Governments have declined under stringent monetary influences, while railway mortgages are generally weak and irregular. The foreign exchange market remains steady.

THE PAPER MARKET.—With the advance of the season and an improvement in business generally, an impetus has been given to the demand for paper, although this trade is usually among the last to derive any benefit from a general revival of business. The lower qualities of both book and news have assumed a stronger tone, and, in instances, an advance of ¼c. has been secured, and even with this small appreciation in the price, the mills are generally so fully employed that delay must be experienced before they will be able to deliver the goods on orders in hand. While fine writings and the high grades of print papers show no change in value, they are steady and hold their own very well, and the same remark will apply to manillas, only the low grades of the latter showing any weakness. Many mills have been compelled to run on part time, and others have been closed down altogether during the summer on account of short water, but nearly all of these are now starting up, and while the condition of the trade has some encouraging features at this time, the increased production may change the situation very materially within the next thirty days, as the demand will scarcely absorb all of the production. The export trade from here in straw wrappings to Cuba is said to have fallen off very materially lately, other markets seemingly offering greater inducements.

THE STATIONERY MARKET.—Although the protracted inclement weather which prevailed most of the time during the past week has been something of a hindrance to business, there has been a fair degree of activity shown. Many of our large houses have all that they can do to fill their orders, and are beginning to experience a scarcity of stock. Large original orders are still being filled; but a great many orders given early in the season are now being duplicated, and this constitutes a large portion of the business doing by some houses. There is no diminution in the activity previously reported in the fancy goods and fancy card trades. Many of the manufacturing firms are devoting their attention to holiday and Easter novelties, and new things are being shown daily. Staple goods hold their own very steadily, no changes in prices being reported since our last.

NEW ARTIFICIAL WOOD.

A German inventor has recentiy patented a new method for obtaining objects of irregular forms from an artificial woody mass, which consists of cellulose, starch, meal and sawdust. He makes this material as follows: Ordinary commercial cellulose, reduced to pulp in water, is placed over a fine sieve, to deprive it of the water, after which three parts' weight of starch, two parts of meal (either wheat or corn) are added, and the whole thoroughly mixed. This mixture is boiled for one hour in a water-bath, which converts the mass into a kind of glue, which is then mixed with an equal quantity of sawdust. This mass is rolled into plates and left to dry in a hot room. When dry it is ready for use. These sheets are pressed into any desired form by the use of iron or steel molds, heated to about 120° Cent., and under a pressure of about 700 kilogs. per square centimetre. Under that degree of heat the mass becomes viscid, and fills every part of the mold. The pressed object is taken out of the mold, and after cooling, resembles wood, hard and elastic, becoming bone-hard after a time. It can be treated like wood, worked with a chisel, sawed or filed, and be colored, polished or glued. It can also be veneered. In order to prevent objects made of this woody mass from expanding or drawing, the mass may be rendered more plastic by adding pipe-clay in the manufacture. Coloring matter may also be added to the mass. A very good, but of course inferior article, may be made by increasing the percentage of sawdust.

A QUESTION OF PATENT RIGHT.

A perplexing question often arises under the patent laws: Suppose a workman in the employ of some large establishment invents a valuable improvement in the machinery or processes—does the patent for it belong to him or his employers? They always say that they were paying him for his time, and are entitled to whatever he accomplishes. He argues that inventing is a matter quite outside the duties for which he was hired. For example, a plow-manufacturing company in Indiana employed a superintendent of their business, and he, during his engagement, took out a patent for improvements he made in the plows they were selling. They sued him, claiming that he should transfer the patent to them, for they said that they were led to engage him by his assurance that he had large experience in making and selling plows and devising improvements, and that he would devote his time and services to manufacturing and perfecting their plows; also, that the improvement he had patented was made partly by aid of suggestions from other employees, and with materials belonging to the company. The judge said that these facts were not enough to make out their case. Persons are not deprived of the right to the inventions they make while in the service of others, unless they have been hired and paid to exercise their inventive faculties for their employers. A contract for the time, labor and skill of an employee in manufacturing and selling does not give the employer the right to an improvement which the employee invents. If, in this case, the superintendent was materially aided by suggestions from other persons, he was not sole inventor, and perhaps his coadjutors were entitled to a share in the patent, but the fact would not give the employers a right to it.

Most young people act as if they thought their parents were born the same day that they were.

INDIAN INK.

Maurice Jametal has compiled from native sources a monograph upon Indian, or rather Chinese, ink. M. Jametal, following Chinese historians, attributes the invention of ink to Tien-Tchen, who lived between 2697 and 2597 B. C. At this time the ink used by the Chinese was a kind of lacquer, which was spread upon silk with bamboo sticks. Afterward some kind of black stone to which water was applied was employed, and finally, about two centuries and a half before the Christian era, in the province of Kiang Si they began to make balls of lampblack, obtained by burning a mixture of lacquer, firwood and size. The new ink soon found favor, the older fashion died out, and the province had the distinguished satisfaction of having its industry supervised by an official of the Imperial Court, and of sending an annual tribute of ink for the special use of the emperors of the Tang dynasty. Toward the close of the sway of that family lived an inkmaker whose name, Li-Ting-Kouei, is still remembered with admiration. For the production of the lampblack of "Indian ink" various methods have been employed, but firwood has generally been used in combination with various oily substances. The best ink is said to have an aromatic flavor, and this, we are told, leads some persons to drink it dissolved in water. It has been suspected that some part of the Chinese processes now used have come from Corea, if indeed that is not the real birthplace of the industry.

TO WRITE, GILD AND ORNAMENT ON GLASS.

Before you commence this work, you must acquire a thorough knowledge of sign writing, otherwise it would be folly to attempt it. You will require a drawing on paper for each design, which you will prepare as follows: Cut a piece of thin paper to the size of your glass, draw out your design correctly in black lead pencil on the paper, then prick through the outline of the letters with a fine needle. Tie up a little dry white lead in a piece of rag; this is a pounce bag. Now place your design upon the glass right side up, and dust it with the pounce bag; take the paper carefully off, and the design will appear in white dots upon the glass. This is to guide you in laying on the gold on the opposite side. Now clean the glass well on the side that the gold is to go on. Prepare your size in the following manner: Get some perfectly clean water, without the slightest particle of grease or other foreign matter; put it on a slow fire to boil, using an enameled saucepan for that purpose, and taking particular care the smoke does not get into it; while boiling, put in two or three shreds of the very best isinglass; let it boil a few minutes, then strain it through a fine, clean linen rag; when cool, it is ready for use. The great point in glass gilding is to have the glass, the size, and everything you use, perfectly clean; a touch of the finger on the glass will tarnish the gold; you must use the tip and cushion to put on the gold, laying the gold on as level as possible, as its uniform brightness depends in a great measure upon that point; use a flat camel's hair tool for laying on the size; flow the size on, and let it drain off when you put the gold on; when perfectly dry, take a ball of the finest cotton wool, and gently rub or polish the gold; you can then lay on another coat of gold, if desirable; it is now ready for writing. As the letters will have to be written the backward way, you must turn your drawing face side downward and pounce as before; but on the gold this time mix a little of the best vegetable black with black Japan; thin with turpentine to a proper working consistency; write with this when thoroughly dry; wash off the superfluous gold and shade as in sign writing. In ornaments you will have to etch or shade the gold. Proceed to lay on the gold and pounce the ornament exactly as above; then etch or shade it with the point of a slate pencil or piece of hard wood, slightly wetting the wood when you want a broad or black line; then pick in with black.—*Varnisher's Companion.*

PROGRESS.

When speaking of Western railroad enterprise, it is common to mention the Chicago, Burlington and Quincy as a familiar example. Starting in 1849 as the "Aurora branch," with only thirteen miles of road, from Aurora to Turner Junction, on the line of the old Galena road, it continued, like a great insect stretching out its antennæ, as settlement and civilization advanced, till in 1854 it owned a line from Chicago to Galesburg, 164 miles. Now, in 1882, since it has come into possession of the B. and M., in Nebraska, and completed its Denver extension, it has over 4,000 miles, and is one of the most important of the great systems of the United States. It runs through the oldest and richest sections of the great West, and is among railroads a regular "king pin." In its steel embrace, Chicago, St. Louis, Peoria, Burlington, Keokuk, Rock Island, Hannibal, Quincy, St. Joseph, Kansas City, Atchison, Omaha, Council Bluffs, Lincoln, and Denver "glitter like a swarm of fire-flies tangled in a silver braid." As for the business of the road it has never had less than its share and generally far distances its competitors. Nor is this true only of freights, for the handling of which its multitudinous direct lines give its special prominence and advantage; but traversing as it does a beautiful and interesting country, and furnishing as fine an equipment as is to be found in the world, its passenger business is very heavy.

The traveler will find it to his advantage, both in the matter of comfort and scenery, to patronize this line; and now, while the great Exposition is in progress in Denver, could a better trip be planned than one of the new Denver extension to that queen of our Pioneer Cities?

POLISHING WOOD WITH CHARCOAL.

All the world knows of those articles of furniture of a beautiful dead-black color, with sharp, clear-cut edges, and a smooth surface, the wood of which seems to have the density of ebony. Viewing them side by side with furniture rendered black by paint and varnish, says the London *Cabinet Maker*, the difference is so sensible that the considerable margin of price separating the two kinds explains itself without need of any commentary. The operations are much longer and much more minute in this mode of a charcoal polishing, which respects every detail of the carving, while paint and varnish would clog up the holes and widen the ridges. In the first process they employ only carefully selected woods, of a close and compact grain; they cover them with a coat of camphor dissolved in water, and almost immediately afterward with another coat, composed chiefly of sulphate of iron and nutgall. The two compositions, in blending, penetrate the wood, and give it an indelible tinge, and, at the same time, render it impervious to the attacks of insects.

When these two coats are sufficiently dry, they rub the surface of the wood at first with a very hard brush of couch-grass (*chiendent*, and then with charcoal of substances as light and friable as possible, because if a single hard grain remained in the charcoal this alone would scratch the surface, which they wish, on the contrary, to render perfectly smooth. The flat parts are rubbed with natural stick charcoal, the indented portions and crevices with charcoal powder. At once, almost simultaneously, and alternately with the charcoal, the workman also rubs his piece of furniture with flannel soaked in linseed oil and the essence of turpentine. These pouncings, repeated several times, cause the charcoal powder and the oil to penetrate into the wood, giving the article of furniture a beautiful color and perfect polish which has none of the flaws of ordinary varnish. Black wood, polished with charcoal, is coming day by day to be in greater demand; it is most serviceable; it does not tarnish like gilding, nor grow yellow like white wood, and in furnishing a drawing-room it agrees very happily with gilt bronzes and rich stuffs. In the dining-room, too, it is thoroughly in its place to show off the plate to the greatest advantage, and in the library it supplies a capital framework for handsomely-bound books.—*Furniture Gazette.*

NEW WRITING SURFACES.

The following are particulars concerning a new German invention: C. Thieben, of Pilsen, manufactures plates for writing upon with white cement, such as Sorel's magnesia or zinc cement, hydraulic cement or marble cement, which is pressed into thin plates. When magnesia cement is used three volumes of very finely powdered calcined magnesite are well mixed with one part fine powdered quartz or marble, and the mixture is wetted by means of an injector with a solution of chloride of magnesium, 20° to 30° B., or with very dilute hydrochloric acid. This mass is then passed through a disintegrator, the inner parts of which are made of caoutchouc, in order to prevent the mass becoming dirty by touching a metal. It is well mixed, then passed through a sieve and placed in molds. The mold consists of a brass frame with a movable bottom of steel, on which is a polished caoutchouc plate. When the mold has been filled it is passed through an apparatus which renders the upper side smooth, and it is then covered with a plate similar to the bottom plate. The closed mold is exposed, under an hydraulic press, to pressure up to 300 atmospheres. The pressed plate is then covered with impermeable cloth, and left to harden for some days. The plate is then soaked with a 20° B. solution of magnesite and chloride of magnesium, and the surface polished with a linen rag. If lines are to be obtained on the plates the caoutchouc plates are printed with an aniline color two hours before pressing.

THE LOUISVILLE AND NASHVILLE RAILROAD.

During the last two or three years, and especially during the past few months, a great impetus has been given to Southern trade and traffic. The old cities, Louisville, Nashville, Evansville, Lexington, Memphis, Richmond, Montgomery, Knoxville, Pensacola and New Orleans have felt the tide of new life, and are up and doing. But the great artery that brings to the gates of these cities the enterprise and products of the North, East and West, and opens for the South through Cincinnati, the whole United States, is the Louisville and Nashville Railroad. The management of this system deserves great praise for the energy which is bearing rich fruits; this in view of the new time table just issued, which shows a list of connecting lines not inferior to that of any system in the country. Positively, for the Southern traveler, the L. and N. is about the only line worthy of consideration.

A NEW MARKING INK.

Stationers who have a sale for marking ink will find the following at once a profitable and satisfactory preparation: Dissolve 1 oz. of nitrate of silver, and 1½ ozs. crystallized carbonate of soda, in separate portions of distilled water, and mix the solutions. Collect the resulting precipitate in a filter; wash it thoroughly with distilled water, and introduce it, while still moist, into a stone mortar. Add 8 scruples of tartaric acid, and triturate the whole until effervescence has ceased. Next add sufficient ammonia to dissolve the tartrate of silver; mix in 4 fluid drachms orchil, 4 drachms of white sugar, and 12 drachms of finely-powdered gum-arabic. Then add sufficient distilled water to make the whole up to 6 ozs. This ink flows freely from the pen, without running or blotting; it does not require a very strong or long-continued heat to develop it into a fine black, nor does it injure the texture of the most delicate fabric. In fact, it may be said to fulfil all the conditions of a good and cheap marking ink.

Most people who use screw-drivers must be occasionally inclined to use strong language at their persistency in slipping out of the nick and their refusal to go into it. All that is wanted is a short tube, big enough to inclose each screw-head somewhat tightly, but only spring-tight, so that it may rise as the screw-head comes near the wood. Also, to provide for heads of different sizes with the same driver. All this can be done by just turning up a strongish tin tube, three or four inches long, like a slate-pencil case, big enough to slide over the widened point of a round screw-driver, and then fitting spring tight on the shank by means of a piece of leather wrapped around it; and for larger screws than usual you might pull the socket off and put a larger on, with a thicker piece of leather. It answers perfectly. You need not look at your screw, but just put the tubed screw-driver on and turn. It will drop into the nick at the first half-turn, and stay there till the screw is screwed home.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

PLAQUES.

It is no new or sudden freak of fashion to adorn the walls of our dwellings with ornamental pieces of pottery, metal or wood—decorated and beautified in numberless ways—to serve the purpose of pictures and tapestries, forming a pleasant change, and relieving the eye when it has tired of painting and engraving. From the earliest ages, long before the art of painting was discovered, sculpture was in use, and the tablets found on the walls of the temples of antiquity are so many plaques—partly for adornment, partly to commemorate some noteworthy events.

The modern plaque differs somewhat in character from these, but is in many instances no less elaborate in its ornamentation nor expensive to produce. Pottery and metal are the materials mostly employed for this purpose, and sometimes a combination of the two, as in *cloisonné* ware, which presents perhaps the most beautiful appearance when hung to the wall in the form of a plaque, reflecting the light from its metallic portions while the dark or brilliant portion of the enamel gives a rich beauty to the entire piece. The cost of this ware, however, prevents its general sale, as is the case with all the hammered metal work employed for ornamental purposes. In this case, then, as in so many others where we seek to combine beauty and utility, we are driven back to the use of pottery, and well does it meet all requirements. Every grade is employed in the manufacture of plaques—ancient or modern, cheap or expensive—and as of late years the fashion of their use has rapidly increased, to-day the stores are filled with all sizes and shapes, and the demand seems without limit. Square, oval and round in shape—measuring from three inches to as many feet in diameter—costing from half a dollar to thousands of dollars each, and decorated in every way that art, beauty or stupidity can invent, it is no wonder that by a common impulse all house-furnishers decide that a few plaques are the only things needful to complete the beauty of their home, and rush eagerly to the nearest china store to obtain the coveted treasures.

As is often the case, the term "plaque" is a misnomer, or, rather, a designation used properly at first but afterward corrupted by inaccurate usage to apply to an article of quite different kind. Its literal meaning is a thin plate or slab of metal, and the verb means to veneer or to plate, as silver plating and the like, so that the term "plaque" can only be properly applied to articles in metal stamped or hammered into shape. Common usage, however, sanctions its employment to describe all kinds of ornamental articles formed from either metal or pottery designed to be hung against the wall for the adornment of the room.

Janvier says in reference to this term: "In speaking of plaques, the French decorators refer only to perfectly flat or slightly curved surfaces of any shape and without a bottom rim or base." This excludes all porcelain from the definition, as only faience or earthenware can be fired without the rim or foot to which he refers. This is the ground taken by most authorities, and although unfair in this one particular, is perhaps correct as a general definition.

It would be useless to attempt a description of the many varieties of wares and decorations offered in this city alone for this purpose. No one article is made in so many qualities and styles of decorations, and like pictures, rarely do you meet with duplicates of decorations. A new fashion appears for the first time this season

that is novel and very effective. We refer to the square or oblong plaques, just arriving from Paris. These are mostly decorated with woodland or river scenes, and from their shape are peculiarly adapted to fill the spaces over tops of doors, while the decoration is seen to advantage at a little distance.

Oval panels are also very handsome, and in the majority of cases a human figure at full length and erect fills the centre, clothed in knightly costume, or arrayed in the robes and plumes of a duchess or lady of "ye olden times." We were shown not long since some round plaques most exquisitely painted by a Paris artist, who affixes his name to them, each one containing a most beautiful female face. Nothing could be handsomer than these, and as works of art they are entitled to the highest praise. All of these were upon faience plaques of ivory colored body, that formed an effective contrast with the softer tints of flesh and drapery.

Barbotine plaques are also very handsome, but are difficult to keep clean and easily broken.

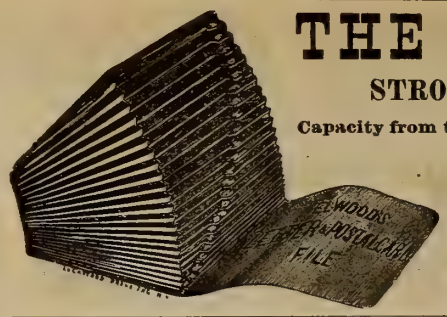
No prettier ornament can be devised for a room of any sort than a plaque properly chosen, of a decoration that is in keeping with the use of the room in which contained, and in harmony with its surroundings. As we have said, the fashion is spreading, and although the quantity of plaques now on hand with our advertisers is large, very few—if any—will be in stock when the "profit and loss account" is figured next January.

From the nature of the article, plaques cannot be suspended from the walls or stood upon tables without some support. To meet this necessity a large variety of frames are made in plush or velvet, in which the plaque appears as a picture, its beauties being much increased by its surrounding. These frames are so arranged that they may be hung to the wall like a picture, or stood erect upon a centre table. Little tin clasps are also sold, to which a cord or wire may be attached to suspend the plaque.—*Crockery and Glass Journal.*

POLISHING WOOD-WORK.

The following is taken from Comstock's new work, "Interior and Interior Details": Soft woods may be turned so smooth as to require no other polish than that which can be given by holding fine shavings of the same wood against them in the lathe.

For polishing mahogany, walnut and some other woods, the following formula is given: Dissolve beeswax by heat in spirits of turpentine until the mixture becomes viscid. Apply a clean cloth, and rub thoroughly with another flannel or cloth.



Beeswax is sometimes alone used. For work in position, it must be melted and applied and rubbed as above. For work in the lathe, it can be applied by friction, the slight amount of wax melted being sufficient for the polish. The work should be thoroughly rubbed.

Mahogany may be polished by rubbing first with linseed oil, and then by a cloth dipped in very fine brick-dust.

Some hard woods have a natural polish, and do not require a polishing medium.

A fine gloss can be produced by rubbing with linseed oil and then holding shavings or turnings of the same material against the work in the lathe.

A very perfect surface can be obtained with glass-paper, which, if followed by hard rubbing, will give a beautiful lustre. Lustre can also be given to carefully finished surfaces by applying a small quantity of thinned varnish, shellac or "fillers" by a cloth, and carefully and thoroughly rubbing.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot. Each sheet is water-marked with name and date.**

CINCINNATI TRADE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, October 2, 1882.

Some people call the week dull, but sales have been steady, cash has flowed in freely, old customers have been buying more, and new customers are joining the ranks, and fresh territory is coming into the Cincinnati field. Customers pay prices cheerfully, and demand the best goods. In fact they are pressing manufacturers on this matter of the quality of goods. That is true in every line of industrial trade and manufacture. Money never was easier. It went to New York till Secretary Folger let loose his golden store, but since that time it has accumulated here, and rates of interest are very moderate. In fact, money will soon be casting about in search of permanent employment, and will soon find it. Nearly every manufacturer of stationery is hampered for room. Goods are stacked in store-rooms from garret to cellar, and several of them are already consulting architects about increasing their buildings next year. Manufacturers of presses and machinery East and West will bear witness that inquiries from Cincinnati as to the cost of "increased facilities" indicate a general and strong tendency to expansion of business. It is perfectly safe to predict that early next spring there will be much building here chiefly of manufactories and business houses.

After all, some men say business this week was "dull;" others, to state the case more softly, call it "very quiet." Why should men talk so? Is there any reason for such talk? Well, let croakers growl and grumble. Let us regard this class as an element or a component of "the spice of life," on the supposition that they were created with growling propensities by way of adding to the variety of human character.

Walk into any store-room in the paper or stationery line in Cincinnati, and you will waste time looking for piles of dusty goods. There is too much turning and upturning to admit the gathering of dust. There are no empty shelves or vacant corners, no lounging clerks. Everywhere bustle and business strikes one upon a first glance. Wagons and drays unloading and loading on the streets, and a rush in the store-room is the rule. Yet some men actually talk of this condition of trade in a disparaging, not to say unappreciative way.

Thus far the frost has kindly kept away. The corn has ripened in the fields, the wheat is garnered in the barns, and soon the "Indian weed" will find a shelter proof against the frosts of fall. Let the smoker and the chewer, too, take heart, for such a plant and such a yield of "amber" leaf was never known before. Wheat, corn, cotton, tobacco in rich yields, to back a trade already full of life and vigor. What more do you want; what room for grumbling?

All living oral testimony from actual knowledge unites in bearing witness to universal manifestations of a general high state of prosperity. Traveling men whose business is to see wealth in harvest fields and granaries and aid in distributing it all, say that the like of the present surplus wealth of products of the earth and of the workshop in this country is not of record in its past industrial history. This testimony is concurrent. It comes from the north, from the south, from the east, and from the west. The testimony is consistent. The witnesses have capacity to judge, opportunity to know, and they are free from bias. The appended list of them who have been in Cincinnati all tell the same story—"trade, gilt-edged everywhere." All reports from other quarters corroborate their testimony. Here are the names of some of the witnesses who have borne testimony within the last few days in Cincinnati: T. L. Johnson, of H. L. Judd & Co., New York; B. A. Stone, of Langfield, Turner & Andrews, Philadelphia; J. B. Gunn, of Eberhard Faber, New York; Chas. M. Sterer, of J. G. Ditman & Co., Philadelphia; C. E. Conover, of Banning, Chadwick & Co.; G. E. Parmenter, of Parmenter Crayon Company, Waltham, Mass.; S. A. Trowbridge, of New York; Jim James, of Daniel Slote & Co., New York; L. H. Thomas, ink manufacturer, Chicago, Ill. All the boys on the road say business is "biggeranever" this fall.

One of the largest bills of goods sold in Cincinnati this season, nearly a car-load, was sold by W. R. Carpenter & Co. to Illinois, Chicago district.

The foundation of one of the largest buildings in the country for chromo-label and show printing and the manufacture of playing cards, that of Russell, Morgan & Co., has been laid in "Deer Creek," in this city. A dozen years ago that immense rich establishment started with next to nothing, except brains, skill and energy.

The paper manufacturers and dealers are holding prices stiff. Charles Stewart will not let up; Louis Snider's Sons are firm; Chatfield & Woods will not give a peg. They all find a good demand, good pay, and a widening field, and can't afford to slash each other's throats, even if they were wicked enough to be capable of such diversions.

One of the liveliest places on Walnut street just now is J. R. Mills & Co.'s establishment. There is no end to the call for reversible wrappers, and the uses to which they are applied is extending rapidly.

William Skinner & Co., corner of Main and Second streets, are doing a driving business in the blank-book and mercantile stationery line, and no trifling business in books.

R. L. Curry & Co. have their hands full in art printing and engraving, and a good run on nice stock of fancy goods.

In stationers' notions R. Wurlitzen & Co., Fecheimer & Amberg, and Knast Brothers do a thriving business.

It is never other than supposable of great houses like those of Robert Clarke & Co. and Van Antwerp, Bragg & Co. that their business is brisk, large and growing.

In the schedule of establishments with their hands full and more coming must be mentioned the houses of Woodrow, of Bradley, of A. H. Pounsford & Co., of Mallory & Welb, of Welstock & Baldwin, of Peter Thomson, and of George E. Stevens.

J. R. Hawley, newsdealer and stationer and theatrical headquarters, is in the heyday of his glory, now that the amusement season is on.

Next door to Hawley, Perry & Morton, in the same line of business, except theatricals, do a driving trade.

Wilde, on Fountain square, who has a fine, rich stock of German books and art works, and Barton, in the Arcade, who deals in art stationery and art materials, both share the thrift of the season and the times.

PRINCE WILLIAM.

CHICAGO JOTTINGS.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS,
8 Lakeside Building,
CHICAGO, September 30, 1882.

With a pleasant fall, a not too exciting, but just stirring enough political campaign, lively markets, plenty of fresh railroad competition, good crops and plenty of money, trade is very like to be brisk during the coming winter. Indications all point that way already, and, with few exceptions, everybody is jubilant over the prospects; the exceptions are "sore-head" politicians, authors aspirant to new honors in the field dramatic.

Probably one of the surest indications of the season in this city is our annual Inter-State Exposition, the tenth of which is now in progress. A poverty in exhibits, and meagre attendance argues to the Chicago mind hard times in the provinces, and consequent poor demand for new goods. If the "craps fail, ye know, dad can't 'ford to let marm an' the rest on us go up

to the fair." Last year's clothes have to be patched over and turned; Matilda's bonnet must "do her" another season, and "dad" must wear his old beaver to church through rain and shine another year. But if the yield has been good, every one of our "country cousins," from old cousin Maria of seventy ("come next grass") to cousin Jane, the "new baby," will be up to see us, and stare at the mysteries of Chicago and the Exposition, as well as to lay in their winter supplies of "city goods."

If such prognostications are reliable (and they are generally conceded to be so), the season is very promising, for never since the Lockwood Press has had a Western office, or Chicago an "Exposition," has there been such a fine variety of displays so well managed as this year; nor has there been a more profitable season in the history of the institution. In proof of this assertion, it may be said, that up to this morning, the 30th, 230,000 persons have visited the exhibition, and this number far surpasses—day for day—the records of any other fair yet received this year.

Almost everybody in Chicago who has become known to your readers through THE STATIONER, has an exhibit. There is L. W. Noyes, with his wire dictionary-holder and his new folding book-rack (of which you shall hear more at a later day), besides card tables and other neat wire novelties. Near him are A. J. Spalding & Brothers and John Wilkinson, with their usual large and tasteful displays.

Spalding's specialty is sporting goods, of which he shows a wonderful variety.

Wilkinson, besides his general lines, shows a fine variety of games, bicycles, scroll saws, and scroll work.

A. F. Atkins has a fine show of stylographic pens (Livermore's) under the charge of Miss Spencer, whose thorough knowledge of the goods has made the exhibit very profitable.

Atkins, by the by, gives a very encouraging report of the few weeks he has been in charge here. The pens seem to sell faster and faster, as they become better known, and the only difficulty appears to be about getting the goods as rapidly as they are wanted. He starts on a trip Monday, and will travel from St. Louis eastward.

The Novelty Card Company has a very attractive display of fancy advertising novelties.

Other exhibits shall be mentioned at a later date.

Among the new houses mentioned last spring was that of J. H. Bufford's Sons, under the management of Robert J. Lester. Now, after a campaign of only a few months Mr. Lester notes a very flattering success, as might be expected, for the house he represents. Among the fall specialties of this branch are a large line of gilt and beveled-edge programmes, which are having a large sale among the trade; an exquisite line of New Year cards, which will be sold in the larger cities, Chicago, Cincinnati, St. Louis and Detroit; a line of four-tint lithographed folders, which are opening their first season with *éclat;* a "unique" line of folders, English in design, and æsthetic in execution; a fine list of cottage chromos, in which this house has but one competitor, and a series of exquisitely designed and colored plaques. Mr. Lester has been in the paper and stationery business for years, and knows his trade.

From the J. W. Butler Paper Company this office is in receipt of an attractively gotten up and complete catalogue, which should be in the hands of every patron of the house.

S. Holderness & Co. send in a catalogue of rubber stamps, which is a novelty, in being printed entirely from rubber type. The variety is surprising, and the clearness of the impressions (especially of the specimen of printing from rubber "Brilliant" type) is remarkable.

A new stationery and paper house, under the firm-name of Hackney & Co., is announced to open about the first as a jobber and manufacturer of fine papers and envelopes, at 174, 176 and 178 Adams street. H. C. Hackney, the head of the firm, was for a long time connected with Jansen, McClurg & Co., of this city, and is said to bear a fine reputation in the business.

Snider & Hoole have added to their Chicago branch a bookbinder's, engraving and tool cutting department. The same house will hereafter be the agents for the Androscoggin wood pulp boards.

The Illinois Iron and Bolt Company reports the fall trade in letter-presses opening well, with large sales.

Printers in Chicago seem to be making steady and rapid advances in the artistic merit of their productions, and every new circular from rival establishments seems to be an improvement on the last. The latest are from Tranter Brothers & Co.—an announcement in very exquisite color work, border and body, which is fine both as regards register and execution, and a circular from Miller, Hart & Barlow, which for plain work would be hard to beat.

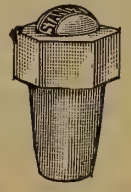
A recent addition to the tourist literature of the age is "The North and West Illustrated," issued by the Chicago and Northwestern Railway, which describes every point on the line of that railroad, and is indispensable to a full and correct knowledge of the vast territory commonly known as the "Northwest." This book also touches on points of interest regarding the territory of many of the principal connections of the Northwestern Road. To read this little book is to impress more firmly than ever upon the mind that the Chicago and Northwestern Railway is in reality what it is in its corporate name, the "Northwestern" railroad—for what point of importance in the West or Northwest cannot be reached by it or its immediate connections?

"Sufficient to the day is the evil thereof," and sufficient for the week is this Chicago screed of

G. B. H.

POISONOUS COLORS.

The German government has just laid before the Reichstag the following decree, bearing date May 1, 1882, concerning the prohibition of poisonous colors for the coloring of certain alimentary substances and articles of food: 1. The use of poisonous colors for the manufacture of food-products or articles of food intended for sale is prohibited. Those which contain the following materials or compositions are considered as poisonous colors within the meaning of this enactment: Antimony (oxide of antimony), arsenic, barium (except sulphate of baryta), lead, chromium (except pure chromic oxide), cadmium, copper, mercury (excepting cinnabar), zinc, tin, gamboge, picric acid. 2. The preserving and packing of food-stuffs or food-products intended for sale in wrappers colored with the above-cited poisonous colors, or in barrels in which the poisonous color is so employed that the poisonous coloring matter can pass into the contents of the barrel, is prohibited. 3. The employment of the poisonous colors enumerated in Art. 1 is prohibited for the manufacture of playthings, with the exception of varnish and oil-paints made of zinc-white and chrome yellow (chromate of lead). 4. The use of colors prepared with arsenic for the manufacture of paper-hangings, as well as that of pigments containing copper prepared with arsenic, and of matters containing similar colors for the manufacture of materials of dress, is prohibited. 5. The putting on sale, and the sale, wholesale or retail, of food-stuffs and food-products preserved or packed contrary to the regulations of Articles 1 and 2, as well as playthings, paper-hangings and dress-materials manufactured in contravention of the directions in Articles 3 and 4, are prohibited. 6. This law will come into operation on April 1, 1883.—*Br. Med. Journ.*



WOOD INLAYING.

If the work has to be polished, size the same all over with Russian glue, and let it be well strained through a fine linen cloth prior to using. When dry, slightly rub the same down with fine spent sand-paper, but on no account across the bate, because this will be manifest after polishing. Then get some white polish and mix up the color you desire to use with it, but not too stiff; be quick and expeditious with your lining, &c., as this material dries quick. It is accomplished with an ordinary slate pencil. But if unacquainted with the work, try what is termed "spirit-color" (turpentine and japaners' gold size) in place of white polish, but see that the work be sized over again prior to polishing. If this is not attended to you will be disappointed, as polish will not agree with the gold size. The size must not be used too strong nor yet too weak; this may be easily tested prior to commencing operations on the large job. If the size be too weak the color will spread from each side of the line into the bates of the wood. If stencils are to be used on the work, put no blacklead marks upon it, as this is a bad fault and always disfigures the work. Use a little soft chalk and chalk line. White polish is made in the following manner: One pint of alcohol, 4 oz. of white shellac and 1 oz. of sandarac. Shake up the bottle occasionally. When the gums are dissolved it is ready for use. In putting on the stencils be careful to work them dry enough, and if required clean up the edges with a writing pencil immediately.

No. 31 Maiden Lane,

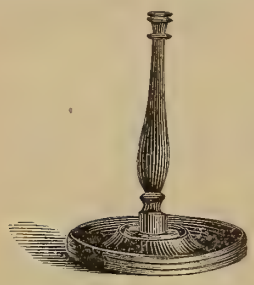
New York, 1882

To the Booksellers and Stationers

Gentlemen;

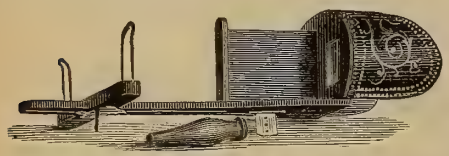
We have prepared a catalogue of specialties for the Holiday trade. It is finely illustrated, showing over one hundred choice designs, and will be forwarded to dealers, free of charge, upon receipt of their applications.

Very truly,



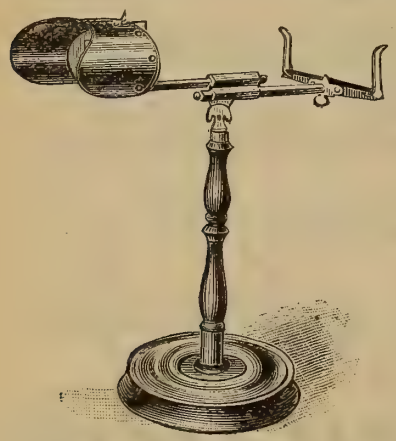
John Wilson's Sons

Trade Novelties.



[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

IMPROVED STEREOSCOPE.



The enterprise which some firms evince in introducing new goods and improving others is commendable. There is always one, however, which is prominent in this respect, and perhaps

there is none more noticeable for its enterprise than E. & H. T. Anthony & Co. This well-known firm has just introduced a new stand for stereoscopes, and it is so constructed that the handle of the scope fits into a groove in the top

of the stand. There is also an improvement in the handle, which consists of a hinge-like construction connecting it with the shank of the 'scope, and which permits the latter to be set at any angle when used by the hand or placed on

the stand. The stand comes in either rosewood or walnut, and is made to fit most of the 'scopes which the firm manufactures. The accompanying cuts illustrate the stand, the 'scope closed, and the 'scope placed on the stand.

NEW PATENTS.

"A circular disk-shaped mark, having circumferential notches, so as to represent an official seal."

A HISTORIAN.

Hubert H. Bancroft, the historian of the Pacific Coast, owns a reference library of 35,000 volumes, which has recently been removed to a fire-proof building erected for the purpose on Valencia street, San Francisco. Mr. Bancroft, who is now fifty years of age, is engaged in a work of great magnitude. His five volumes of "The Native Races of the Pacific States" formed a mere preface to the exhaustive history upon which he, with the continual aid of twelve assistants, is now working. Mr. Bancroft was born in Ohio, and he established a bookstore in San Francisco in 1852. He prospered, and became a publisher as well as a bookseller. Early in life he began to collect books and pamphlets relating to the Pacific Coast, and as his fortune increased, he became a frequent purchaser at important book sales in the Eastern cities and in Europe. He secured, it is said, 3,000 volumes at the sale of the great Maximilian collection in Leipsic, and made large purchases at the Ramirez sale in London, and the sale of the Squier manuscripts in New York. The *Evening Post*, of San Francisco, gives an interesting description of the historian's library and study. His vast array of books is divided into many classes, and the volumes are shelved accordingly. The first class contains 12,000 volumes; in the second class there are 300 rare volumes, including early publications in Mexico and California; the third class contains 1,200 volumes of manuscripts relating to Mexico, Central America, California and the other Pacific States, including sixteenth century Mexican records, and 200 volumes of original narratives of native Californians, either written by themselves or taken down by Mr. Bancroft's stenographers. In the fourth class there are 450 books of reference, and the ground floor of the library building contains 10,000 more volumes, divided into many classes for the convenience of the owner. Lord Kingsborough's "Mexican Antiquities;" the Central American views by Charnay, Waldeck, Dupaix, and others; a splendid set of the "United States Exploring Expedition," in 27 volumes; 130 volumes of Judge Ben Hayes' "Historical Collection of Southern California;" works in the Russian language on Alaska; 60 volumes of Mexican *sermones*, and a set of "Papeles Varios," in 216 volumes, gathered in Mexico, are among the notable books in this immense collection, which is said to have cost half a million dollars. Mr. Bancroft has given his sole attention to his "History of the Pacific States" since 1869, and he expects soon to begin its publication at the rate of three or four volumes a year.

MICROSCOPIC OBJECTIVES.

One of the questions raised at the last meeting of the American Association for the Advancement of Science has attracted less attention than it deserved, namely, the progress that has been recently made in microscopic objectives, and the value of such combinations as that of Professor Abbey, which, under the style of Ziess object glass, has occasioned universal comment in Europe. The lens devised by Professor Abbey combines with the glasses a drop of oil of the same refracting register as the sections of a sphere themselves, placed between the object to be examined and the opening of the lens system. This device has proved remarkably successful in increasing the power of the microscope; but the question with the association was whether the new invention was likely to supersede the old and narrow-angle glasses for ordinary clinical and biological work. The conclusion arrived at was, that such lenses were only valuable for special purposes, and could not be used to advantage in the clinical and biological laboratory. The difficulty which renders any advance in the power of the microscopic objective of no comparative effect, unless the advance is a very extraordinary one, has never been properly set forth to the average reader; and most intelligent people naturally suppose, when the invention of a new combination is announced which adds to the power of the instrument materially, that something of importance has been added to our means of optical analysis. In reality, there is no practical difference in revealing power between 1,000 diameters and 5,000 diameters. The reason is this: The minutest forms of organic life yet discovered, the primary monads, are clearly developed and defined at the former power; to apply the latter increases their apparent magnitude, but adds nothing to our knowledge of their structure. They are minute transparent spherules about one four-thousandth of a millimetre in diameter with a dancing movement—the simplest form under which living matter exists. Beyond them no discovery has yet been made which justifies the use of the high powers that have been so frequently described; and unless a lens shall be produced that will reveal objects one-millionth of a millimetre in diameter, it is not probable that invention in this direction can add materially to our stock of scientific information. This was the verdict arrived at by the New York Academy of Sciences when the celebrated Tolles objective, whose power was as high as 7,500 diameters, was exhibited before that body by Dr. Ephraim Cutter; and the American Association has but confirmed the judgment of the smaller body, and of practical microscopic experts everywhere. A power of 100,000 diameters, if such a power were attainable, might possibly introduce direct optical analysis to the domain of molecular physics, and thus add something material to our sources of knowledge. But such a power is hopeless of attainment, besides, no stand could be devised whose adjustments would be delicate enough to render it of practical use.—*Boston Transcript.*

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

C. R. Strong, dealer in notions, Atlantic, Ill., is dead.

G. M. Failing, publisher, Gravity, Iowa, has failed.

W. H. Gallup, publisher, Nevada, Iowa, has sold out.

John O'Donnell, publisher of the *Times*, Lowville, N. Y., has sold out.

The stock of Z. F. Carn, printer, Harrisburg, Pa., is in the sheriff's hands.

Luther B. Lyman succeeds Lyman & Payzant, stationers, &c., Boston, Mass.

F. L. Tilton has bought out the stationery business of J. E. Mole, Adams, Mass.

G. D. Leavett, publisher of the *Independent*, Walnut Creek, Cal., has gone out of business.

Charles B. Jenke has bought out George C. Folsom, dealers in fancy goods, Attleboro, Mass.

Welsh, Rees & Co., booksellers and stationers, Philadelphia, Pa., have sold out to David McKay.

The *Banner* Publishing Company, Fort Scott, Kan., has been incorporated. Capital stock, $3,000.

Spooner & Pinkston, booksellers and stationers, Leavenworth, Kan., have sold their business to J. T. Dudley.

Frank H. Jobes, stationer and newsdealer, Greenville, Ohio, has added school and miscellaneous books to his stock.

Myers & Griscom, publishers of the *Commercial*, Chattanooga, Tenn., have dissolved partnership. H. F. Griscom continues.

J. W. & C. B. Sheridan are now painting all of their machinery a light lead color, which adds very materially to the looks of their machines.

Parker, Ryan & Co., stationers, St. Louis, Mo., have dissolved partnership. J. A. Parker and E. P. V. Ritter succeed, under the style of Parker, Ritter & Co.

The firm of Radebaugh & Co., publishers of the *Ledger*, New Tacoma, Washington Territory, has been dissolved by the retirement of Isaac Anderson. Radebaugh & Alexander succeed.

Harper & Brothers announce that in future "McClintock & Strong's Cyclopædia of Biblical, Theological and Ecclesiastical Literature" and "Harper's Cyclopædia of United States History" by Benson J. Lossing, will be withheld from the trade, in order to fully protect the agents connected with the firm's subscription-book department in their canvass.

The word "Chatterbox" has become suggestive to little ears of literary and artistic treasures which were unheard of by the children of a generation ago. Among the books which bear this name, "Chatterbox Junior" is very attractive. Its many pictures, with the accompanying sketches, will afford profitable amusement through many a long winter evening. Both pictures and stories are greatly varied in character, but they are all of great merit. It has a cover of vivid colors, which will make any child dance with delight. It is published by R. Worthington, New York.

Robert Gair & Co., manufacturers of chromo-lithograph cards, having warerooms at 161 and 163 Chambers street, and manufactory at 239 to 245 East Fifty-sixth street, this city, are now taking an account of stock preparatory to a dissolution of the co-partnership, which will take place shortly. The firm was established a little less than two years ago by Robert Gair and Maurice Marques, and continued to be conducted by these gentlemen up to within about a month ago. At this time H. P. Bailey, who had been in the employ of the Forbes Lithograph Company, of Boston, for about twelve years, was admitted to partnership. Upon the dissolution of the firm yet to occur, Robert Gair will retire from that line of business and will continue his old-established trade in paper, paper boxes and paper bags at 143 Reade street. The style of the new firm to be formed has not yet been decided upon.

Martha J. Lamb is preparing a new historical work, to be entitled "New York Biography," which, it is said, promises to be as original and masterly in execution as her "History of the City of New York." The new work will include personal sketches of railroad projectors, merchant princes, political magnates, journalists, scientists, men of letters, educators, clergymen, dramatists, artists, poets, City Fathers, philanthropists, and indeed of all leading contributors to New York's present greatness; and it will at the same time review the part taken by New York in public enterprises of magnitude, and great national dramas. It will be fully illustrated. A. S. Barnes & Co., New York, are the publishers.

The Floto Manufacturing Company, 290 Broadway, shows a beautiful line of goods. It includes Christmas, New Year, birthday, valentine and Easter cards and other goods. Its specialties are fancy novelties, which comprise satin and silk anti-macassars, glove and handkerchief cases, mounted with chromo-lithographic satin designs, and richly embellished sachets come in great variety, one of which, called a palette sachet, is very beautiful, and is of new type. Some elegant plush plaques are also shown. For these goods, the firm has received a large order for the Garfield fair, which comes off in Washington in November. Novelties are being constantly introduced.

Porter & Coates, Philadelphia, announce some very attractive holiday publications, profusely and elegantly illustrated. Among them are "Holidays at Home for Boys and Girls," by Margaret Vandegrift; "England, Picturesque and Descriptive," by Joel Cook, and a variety of other works for old and young.

Mr. Baird, of Baird & Dillon, Chicago, was in the city this week. Mr. Baird's physique is in keeping with the magnitude of the business of his house in the line of photograph albums, and is said to take the lead in that city. Mr. Baird is both jolly and fat.

Goodeve & Sidford is the style of a new firm of printers and lithographers established this week at 47 Broad street this city. Mr. Goodeve has been in the business before and he is now joined by Mr. Sidford.

Thomas & Hagar, commercial stationers, Wall street, this city, dissolved partnership October 1. Mr. Thomas will continue the business at the old stand, and Mr. Hagar is about to establish a new house.

Fire broke out in the Morgan Envelope Company's block, on the corner of Main and Worthington streets, Springfield, Mass., on September 27. The damage was slight.

D. W. Finch, dealer in fancy goods, Smith River, Cal., has sold out.

James Wilkinson, dealer in notions, Dover, N. H., has sold out to P. Taylor.

H. O. Turner & Co., printers, Chicago, Ill., have assigned to Dewitt C. Jones.

J. A. S. Elkin has bought out Furlong & Tiger, stationers, &c., Las Vegas, N. M.

Bright Brothers, paper stock dealers, New Haven, Conn., have dissolved partnership. R. C. Bright continues.

Bocemsdes & Allen, lithographers, New Haven, Conn., have dissolved partnership. Henry C. Allen continues.

Wm. F. Madder, bookseller and stationer, Belleville, Ohio, has been burned out; loss, $1,700; insured for $1,700.

The *Mountaineer* Publishing Company and the *Times* Publishing Company, Dallas, Oregon, have consolidated under the style of *Times-Mountaineer* Publishing Company.

Atwood & Sherburne is the style of a new firm of manufacturing stationers and printers just started at 87 and 89 Washington street, Boston, Mass. Mr. Atwood has been in the business for several years and Warren R. Sherburne has now joined forces with him.

"Songs of a Semite" is the title of a collection of poems by Emma Lazarus, and published at the office of the *American Hebrew*. This volume contains "The Dance to Death" and other Judaic poems which have appeared in the columns of the paper mentioned. A hurried perusal of it impresses one with the belief that Miss Lazarus is a poet of high order, a strong, forcible and graceful writer.

E. & H. T. Anthony & Co. have for some time past been filling a large portion of the orders taken by them during the spring for imported albums. As the firm is constantly receiving shipments of these goods from Europe, it will have constantly on hand a stock notwithstanding the great demand. The line is very beautiful and varied, and the trade visiting the city might find it to their advantage to call and examine it.

The goods published by Milton Bradley & Co. have been noted for the beauty of design and delicacy of coloring found in their picture toys and in their beautiful labels. The reason for this is seen on a visit to their establishment, where a large number of artists will be found busily at work, and the huge presses steadily carrying back and forth the lithographic stones from which all of their work is printed. It is well known that finer work can be printed by lithography than by any of the other processes usually adopted for the color printing seen in common toy and label work. Many of the designs seen in the labels and pictures in the toys of this house are good enough for birthday, Christmas and Easter cards. While the presses are busy running large editions of toys and games, now selling rapidly, the artists are already at work on novelties, which will not see the light till another summer. Of their new things now selling, the most attractive in the line of artistic work are the picture toys, combination circus and sectional railroad puzzle and the game of costumes and fashions. The first two are sectional, interchangeable picture puzzles or toys. The latter is a game consisting of a beautiful set of cards, which represent seventy-two costumes of twenty-three epochs and ages, from ancient Rome to the present time. All of these are put up in beautiful boxes decorated with elegant labels, corresponding with the contents, and are

suitable for the best trade in this class of goods.

Dempsey & Francis, newsdealers, &c., Custer City, Pa., have sold out.

Hall & Johnson, bookbinders, Toronto, Ont., have dissolved partnership.

Williams & Hardman, publishers, Minden, Neb., have been succeeded by R. D. Hardman.

Alexander McLeod, dealer in periodicals, &c., Providence, R. I., has sold out to W. Plaisted.

C. E. Young, of the firm of Young, Lockwood & Co., dealers in blank books, Buffalo, N. Y., is dead.

Tyler & Seagrave, printers, Worcester, Mass., have dissolved partnership. Daniel Seagrave continues.

Jones & Moreland, publishers of the *Journal*, Metropolis, Ill., have dissolved partnership. B. O. Jones continues.

Graves & Brouse, publishers of the *Gateway Express*, Emerson, Manitoba, have been succeeded by the Emerson Publishing Company.

John Holland, Cincinnati, announces that he has made a 12-inch circular saw with teeth tipped with iridium—to be used for sawing hard wood.

Wright & Chadbourne, stationers, &c., San Francisco, Cal., have dissolved partnership. Their business is continued by Geo. W. Wright & Co.

Attention is called to the new advertisement in this issue of Charles J. Cohen, Philadelphia. The reputation of the house is such as to guarantee faithful performance of all that it promised.

Milton Bradley & Co. have received letters patent for improvements in dissected picture puzzles, and have published under their patent two picture toys, which promise to be of great interest to the youngsters. The principle covered by the patent is the substitution of other parts in a dissected picture, by means of which some new feature is added to the original or a change made in the design, which is quite a different thing from the old-fashioned dissected picture, which could be put together in only one way to produce one design. The sectional railroad puzzle is a combination of car-bodies, tracks, platforms, roofs, &c., with an engine and tender, which are so designed that they are largely interchangeable, and, when combined properly, represent an elegant American fast express train, consisting of baggage and express, mail, smoking, drawing-room, dining and sleeping cars. Extra pieces represent flagman, switch signal, and a load of colored people in imminent danger of demolition by the locomotive. All of the car-bodies are in duplicate, showing exterior and interior, thus illustrating the operations of catching the mail-bag on a fly and sorting the mail, the construction of the sleeper, and the arrangement of the dining cars. As an object of interest for a steady thing, nothing can surpass a railroad train, but next to the train, probably, comes the circus and menagerie in the mind of the average youngster—and this subject has been worked up under the same patent, and must be seen to be understood. In it there are more than thirty pieces, which are used interchangeably in the variations of a menagerie and circus show, each scene of which requires only twelve pieces. Thus the immense number of changes may be imagined. Both of these toys are on the same principle as the matched pictures published by this house, which toy has had an immense sale. The polished wooden boxes and beautiful labels render these goods very attractive and suitable to be placed in any stock of goods in the stationery or fancy goods trade.

M. F. Tobin, the pioneer of the cottage panel business in this country, has just introduced a new series of panels, in which he has made a decided hit. It is called "Lights of New York," and consists of comic representations of J. G. Bennett, Talmadge, John Kelly, Vanderbilt, Bergh, Cooper, Beecher, Gould, Conkling and "Sam'l of Posen." The likenesses are excellent, and the panels can be used for either ornamental or advertising purposes. The other series of panels which have been remarkably successful are the "Sunny South" and "Comique." The first illustrates plantation and the latter comic scenes. Mr. Tobin has also introduced a new series of palettes in six floral designs. These goods are mounted on very heavy fine stock, and the illuminations are artistically done. A large variety of palettes in landscapes, figures, poets' heads, &c., is shown. As the house caters to the taste of the public, it makes it a special object to produce two new designs in such goods every month. A specialty is made in hand-painted palettes, which are elegant in design and elaborate in finish. They are produced both in oil and water color, and are offered at very low prices, considering the quality of the goods. There is also shown an exquisite line of embossed plaques, the most noticeable designs of which are those representing bunches of cherries and strawberries. The advertising card line is one of the best in the market, and the stock carried is, perhaps, the largest in the world. In Christmas, New Year and birthday cards, the variety is large and exceedingly pretty, and comprises selections from the best manufacturers in Europe, among them being many English and German prize goods. Among other things shown by the firm are large lines of scrap pictures, wire easels and banner stands. The trade generally are invited to call and inspect the stock.

E. J. Miller, publisher of the *Elk County Democrat*, and Henry A Parson, publisher of the *Elk County Advocate*, Ridgeway, Pa., have been burned out. The former's loss is about $4,000, reported not insured; the latter's estimated loss is $2,000; reported insured for $1,000.

August H. Frederich has withdrawn from the firm of Parker, Ryan & Co., stationers, &c., St. Louis, Mo., and has again connected himself with the Buxton & Skinner Stationery Company.

A. C. Farley & Co., publishers and manufacturing stationers, Philadelphia, Pa., have dissolved partnership. The same partners with B. Rowley Baker have formed a new firm under the same style.

McCarty & Hasberg have opened a new line of hammered silver goods which comprises very rich and beautiful specimens in antique designs and suitable to the stationery trade. They should be seen to be appreciated.

The American Paper Box Manufacturing Company, Nashville, Tenn., has bought the entire stock of the Valentine Paper Box Company. Ellison R. Cook, formerly with F. G. Hancock, of Atlanta, has connected himself with this company.

Otto Oberhummer, manager of Obpacher Brothers' New York branch house, arrived on Tuesday per steamship Rhein from Europe, where he has been for several months. He reports that the productions of the house for the coming season will surpass any previous efforts. The samples of novelties which he brought with him are excellent.

Charles J. Cohen, Philadelphia, has just issued "List No. 45" giving revised and reduced prices for card envelopes in twenty different sizes. The "assorted box" put up by this firm has a wide popularity, as it gives every dealer one pack each of twenty different sizes of envelopes for inclosing cards, and at the small cost of $2.25. The list is furnished to the trade on application.

J. H. Bufford's Sons' line of New Year calling cards, is one of the handsomest offered. This firm has brought out a new series of embossed advertising cards which includes representations of animals and birds' heads, fishes, and reptiles, with a blank space on some prominent part of each for the printed matter. The house offers a large variety of panels illuminated with handsome figures.

Hume, Parker & Hodges, Main street, Norfolk, Va., is the style of a new firm just starting in the book and stationery business. This new house is a branch of R. G. Hume & Brother in the same line of business at Portsmouth, Va. The first-named firm is composed of John H. Hume, who is the surviving partner of R. G. Hume & Brother, Edwin P. Parker and W. M. Hodges.

W. B. CARPENTER & CO.,

—MANUFACTURERS OF—

Odd Sizes and Shaped ENVELOPES Only for the Trade,

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, OCTOBER 5, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

AGAIN our correspondence indicates an unbroken line of prosperity, specially marked at the West. We cannot but greet these indications as bound to reflect upon trade in every quarter.

IN a report—of which an abstract appears elsewhere—we are told that the failures in the United States for the quarter ended September 30, exceed by 376 those reported for the corresponding quarter of last year, with an increase in the liabilities of about $9,000,000. A great proportion of these is due to speculation outside of legitimate trade, and are not, therefore, chargeable to the condition of trade. Taking this fact into consideration a review of the situation is more than favorable to general business. We have remarked how comparatively few failures, and these of minor importance, have been noted in the stationery and book trade. Prudence seems to have been quite marked in these lines, and we hope that it may continue.

PROBABLY every reader of THE STATIONER understands the game of "Consequences," and not a few have had reason to appreciate it in its altered form as applied to trade. We have an illustration of this later game in the complaint of a correspondent, who finds it impossible to compete with the grocery trade in the sale of regular stationery goods. If retail grocers can buy papeteries at lowest rates from manufacturers and then sell them at two cents advance on cost, or give them away as presents to customers, then is the lot of the stationer who is obliged to carry a stock of such goods a hard one. We cannot feel surprised that our correspondent expresses his intention to retire from business and leave the field to the grocer. When the latter forsakes the stationery line and changes from papeteries, chromos, &c., to glass: What then?

WHY do not the members of the stationery trade meet once in a while and discuss matters of trade value? We are impelled to this inquiry by noting the fact that the German stationers have a protective union, in which, laying aside all trade differences and rivalries, they combine to consider and act upon questions which concern all alike. We had hoped at one time that our various boards of trade would be able to provide the methods for such action, but, so far, they have done little if anything in this direction. We have spasmodic organizations and trade conventions which meet at odd times and indulge in a great deal of talk, but somehow fail to produce results. Can it be that every stationer and bookseller feels that he is at war with his neighbor and competitor, and that people, whose interests in certain particulars are identical, will spite themselves to spite others? It certainly has that appearance. We have before this mentioned the fact that in Germany the school officials have so dabbled in the business of providing school supplies, either by favoritism or for personal profit that regular trade has been very much embarrassed by their actions. This has led to a vigorous protest on behalf of the trade, who at the general meeting of their protective union, lately held at Nuremberg, resolved to petition the government to compel a reform in this particular. We instance this to show how things are done abroad, and how the trade there unite to try and effect a reformation of abuses in their general interest.

ANSWERS TO CORRESPONDENTS.

A. P. W. wants to know if so-called rice paper used for cigarettes is made in this country, and if so, where?

Ans.—Real rice paper is not a paper-mill product. The cigarette paper known by that name is imported.

H.—Asks address of responsible party to handle a collection of books which is for disposal.

Ans.—We believe that J. Sabin's Son, 24 Park place, New York, will "fill the bill."

A. & V.—Want name of manufacturer of a "patent" preparation for gumming pads without the use of paper on the edges.

Ans.—We don't know of any *patent* preparation. A number of firms make their own glue, and we have heretofore given a recipe for a flexible gum for this purpose.

C. C. Co.—Wants to know who publishes cartoons with "Shut the Door" and like suggestions printed thereon.

Ans.—Brown & Wilson, 28 Beekman street, New York.

Communications.

[Correspondents are requested to write on only one side of their paper. No responsibility for the opinions of correspondents attaches to this paper.]

A Wrong Surmise.

NEW YORK, September 28, 1882.

To the Editor of The Stationer:

To publish my views of the steel pen short count question, I can make a similitude with an incident that transpired with a scientific society which had an argument, lasting several hours, to ascertain why a fish in a bowl of water would weigh more dead than it would alive. After arguing *pro* and *con* for some time, a suggestion was made by one of the society to weigh the fish and ascertain if there was any foundation to the assertion. The result proved that it was six of one and half a dozen of the other. I would be pleased if some one would test this pen question before arguing any further, as it is my firm opinion that this complaint is an advertising dodge on the part of some manufacturer to establish his identity with selling full count pens.

PENCILVANIA.

[NOTE.—Our correspondent is entirely mistaken in his surmise, and if we were at liberty to show him the communications we have received he could not but be convinced.—ED.]

About to Retire.

To the Editor of the Stationer:

Not only in the sale of books by dry-goods houses, at prices no bookseller can compete with; but also in the sale of stationery by grocers, restaurateurs, &c., is the book and stationery business being ruined, and the fault is with the trade who sell outside of legitimate channels.

For example, we carry a good stock of all kinds of stationery, especially papeteries, buying of the manufacturers and selling at fair prices. Recently, one of the grocers in our place bought a lot of several hundred papeteries, assorted—a "job" lot—piled them up, and offered them at an advance of two cents per box over cost, and, where unable to sell, gives them away. Doubtless, he will get all he wants in the end; but it leaves us with stock we cannot sell at his prices, and ruins the market for the future. Indeed, in the country, at all events, the book business is a delusion. Even our good preachers, while expecting $50 a year to aid "the cause," coolly order single books, tell us that they get 25 per cent. in Boston, and expect at least 5 per cent. better from us. In fact, twenty-five years' experience has taught us so much that we intend very soon to seek other employment, and leave to more enterprising men the fortunes that are so sure to be amassed by the bookseller and stationer—especially in the country.

GRANITE STATE BOOKSELLER.

Sought, but not Found.

NEW YORK, September 28, 1882.

To the Editor of The Stationer:

Having noticed the various suggestions for a remedy of the evil of short count in the columns of your journal for several issues past, we concluded to ferret out the guilty parties for the benefit of the trade in general. After counting twelve gross each of the principal English and American manufactures, we came to the conclusion that the complaint of short count was either without foundation or it was an exceptional mistake on the part of the manufacturer. It would be a good way of settling this accusation by publishing a letter from the complainant stating who gives short weight, and so free the fair name of the various manufacturers from any ill thought that may be entertained by the numbers who have read the "short-count trouble" in your journal. As for us, we invite our customers to publish any complaint they entertain for M. L. Leman's pens, which have been in the American market since 1830. We hope that the complainant will throw a little light on this subject.

G. W. LEMAN & BROTHER.

[NOTE.—We are satisfied that the correspondent who first brought up the subject of short count in pens was honest in his complaint; but we believe from the facts which have since been submitted to us that if he bought the pens in original packages—just as they came from the manufacturers—there must have been an accidental misweight.—ED.]

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., October 3, 1882.

With good weather again there has come an increase of trade among the stationers, who have been "down in the mouth," so to speak, perforce the wet of last week. Trade, however, has been moderate, but dealers expect a decided improvement all around and in all departments later on. There is no good reason why trade should not be decidedly active in the near future.

Dealers are stocking up in all seasonable lines. Agents of New York houses have been in town in force during the past fortnight, and have gone away satisfied with their visit. Boston is a good place to come to in this respect—and the stationers here know a good thing in stationery when they see it.

The holiday trade, I learn, will call heavily for nice, gilded papers and gilded cards. The paper-gilders say that business has not been so good with them since 1865 as at present. Much of the nice paper used nowadays is gilt-edged. Large stocks of it are being laid in against the call for it next month.

The book publishers report an excellent prospective demand for high-price books, and the manufacturers of art novelties are satisfied with the position of their trade, present and prospective. All of them are crowded with business.

A run among the leading wholesalers and jobbers of stationery and fancy goods elicited the fact that money is somewhat tight all around, especially in the interior, which has the effect of curtailing orders somewhat, but it is generally believed that the pressure will be over soon and that money will be easier. The tightness is ascribed here more to an artificial than to a real cause.

It is somewhat early for the holiday trade, but dealers say that those who have in the past few years avoided the rush are beginning to purchase. This is especially true in the book, fancy goods and jewelry trades. Buyers now also, no doubt, gain an advantage in prices. Hence, dealers in holiday goods are now obliged to make their holiday assortments some weeks earlier than has been the practice in years past.

New designs in papers are numerous, but there is probably nothing original here in that line worth elaborating but what may be found elsewhere. Anything in stationery travels quickly in these days of competition and quick sales.

The lithographers, printers, and others who have to do with ink and paper, are apparently all busy on work that "is wanted immediately."

The mysterious disappearance of $4,000 worth of stereotype plates belonging to Lee & Shepard, the same being plates of works called for by the holiday trade, is still unsolved. The plates were kept in a sub-cellar. Every junk shop in the city has been visited, but no trace of the property has yet been discovered.

The Exhibition Fair of the Manufacturers and Mechanics' Institute is turning out some fine specimens of printing.

The Wm. H. Brett Engraving Company is an honor to American art, its work being equal to the best in its line.

There is danger of the plaque business being overdone, although the work is well done. L.

On Wednesday, the 4th inst., J. P. Brennen, with J. R. Mills & Co., Cincinnati, was united in marriage to Sallie B. Carlton, of the same city. The wedding tour will extend to Chicago and the Western office of this paper. THE AMERICAN STATIONER joins in congratulations.

Alex. Agar was seen at the Rev. H. W. Beecher's Church last Sunday evening accompanied by a distinguished Southern divine attentively listening to Mr. Beecher's political sermon.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, October 4, 1882.

THE MONEY MARKET.—The current rates for call loans are 7 to 10@15 per cent. on stock collateral, while the discount rates for prime mercantile paper are 9 per cent., and for second class paper 10@12 per cent., with the latter difficult to sell. On very best acceptances 8 per cent. has been paid. The severe money pressure continues to exert a depressing influence upon the stock market, and prices of nearly all securities, good and bad, have been strongly downward. Government bonds and railway mortgages sympathize with the depression of the general share list. Rates for foreign exchange still tend downward, under an increased supply of bills drawn against shipments of securities, cotton, &c.

THE PAPER MARKET.—The recurrence of fine weather has had a beneficial effect upon all classes of city trade, and among the number, paper dealers have shared in the improvement. Although the volume of transactions has not been materially enlarged since last week, there is a more cheerful feeling among our dealers, and more animation is shown in the movement of goods. While there is no great rush of business in any branch of the paper trade, the fall season is progressing favorably. Prices generally continue on a firm footing. In our remarks last week on the subject of prices, we should have qualified what we said in regard to an advance of ¼c. in News. We intended it to have applied to some lots for immediate delivery, and not on orders to be made up.

THE STATIONERY MARKET.—The return of pleasant weather has given some impetus to trade, as shown by the larger number of out-of-town buyers visiting the city this week. The fancy goods branch is particularly active, and some houses have sold so largely and assortments have been so broken into that they are unable to fill many duplicate orders given early in the season. The dealers in staple goods, although not particularly rushed with business, are doing a fairly active trade, a large share of which is at present with Southern buyers of whom quite a good number were among the visitors to the city during the week, although the semi-annual book trade sale attracted many from all sections of the country. Preparations continue to be going forward to bring out novelties in Valentine and Easter cards in which there will probably be a very sharp competition among the various manufacturers. The designs give promise of elegance and originality. No changes are reported in prices.

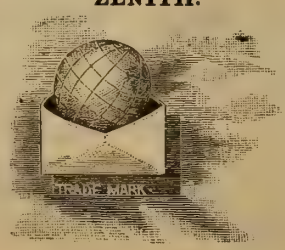
ESTABLISHED BY S. COHEN, London, Eng., 1803.

ESTABLISHED BY HENRY COHEN, Philadelphia, 1838.



CHARLES J. COHEN

Envelope Manufacturer,

WHOLESALE STATIONER & IMPORTER OF FANCY GOODS,

No. 505 CHESTNUT STREET, PHILADELPHIA.

"ZENITH."

AGENCIES IN

London, Birmingham, Paris, Nuremberg, Berlin, Leipsic, Bremen, Offenbach, Vienna, Frankfort, Bohemia, Dresden, Speir, Boulogne-sur-Mer and Edinburgh.

MR. COHEN announces to his many friends throughout the United States that he has spent a large part of the present year in the cities and countries indicated above, and his best efforts have been exercised to select such novelties in **FANCY GOODS** as would attract attention from buyers throughout the country.

With the free use of CASH payments and large orders, all goods are offered at the most favorable prices.

Those of our customers not able to visit the city may be assured of receiving the greatest care and attention, with careful selection for any orders entrusted to the House.

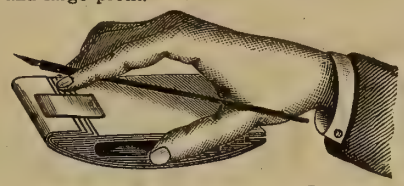
EASY PROCESS FOR DEXTRINE.

Five hundred parts of potato starch are mixed with 1,500 parts of cold distilled water, and eight parts of pure oxalic acid, and this mixture placed in a suitable vessel on a water-bath, and heated until a small sample tested with iodine solution does not produce the reaction of starch. When this is found to be the case the vessel is immediately removed from the water-bath and the liquid neutralized with pure carbonate of lime. After having been left standing for two days the liquor is filtered, and the clear filtrate evaporated upon a water-bath until the mass has become quite a paste, which is removed by a spatula, and having been made into thin cakes is placed upon paper and further dried in a warm situation; 220 parts of pure dextrine are thus obtained. When needed for making mucilage, the solution is only to be evaporated to the proper thickness.

BLUE MARKING INK FOR WHITE GOODS

Dorvault recommends the following :

Crystallized nitrate of silver, dram	1
Water of ammonia, drams	3
Crystallized carbonate of soda, dram	1
Powdered gum arabic, drams	1½
Sulphate of copper, grains	30
Distilled water, drams	4



Dissolve the silver salt in the ammonia ; dissolve the carbonate of soda, gum arabic, and sulphate of copper in the distilled water, and mix the two solutions together.

L. A. Lipman returned home this week from a two months' trip to the West for Boorum & Pease, and reports a very encouraging outlook for business everywhere he visited. Mr. Lipman, as usual, took a very large number of orders.

George L. Pease and family, who have made Ridgewood, N. J., their summer home, are about returning to their elegant residence on Clinton avenue, Brooklyn. Mr. Pease has been at Ridgewood this week.

PAPER TRADE REVIEW.

Consists of Sixteen pages, size of this Newspaper.

EVERY THURSDAY, Post Free, $3 a Year

Remit Greenbacks or Post-Office Order. EDITOR AND PROPRIETOR *W. JOHN STONHILL.*

PAPER MARKETS:—Mill News—Trade Gossip—Samples of Paper—Technical Articles—Record and Illustrations of New Patents—Descriptions of Factories—Letters every week from Paris, Berlin, Vienna and other countries—Market Prices—Gazette.

STATIONERY:—Novelties Illustrated and Described—Technical Articles—Stationery in the Provinces—American Notes—Colonial Reports—Industries of the Trade—Reviews—Gazette.

PRINTING:—Doings of the Craft—Printing in the Provinces—Colonial Intelligence—Foreign News—Criticisms on Specimens—New Machinery—Type Specimens—Original Trade Technical Articles—Descriptions and Illustrations of British Establishments—Letters from our Correspondents, and every item of news concerning the trade during the preceding seven days.

The B. and C. P. and S. has corresponding representatives in North and South America, Canada, East and West Indies, Australia, New Zealand, Tasmania, India, China, Japan, Constantinople, Turkey in Europe and Asia, Russia, Austria, Germany, Italy, Spain, Holland, Belgium, and France; letters from whom appear periodically.

"The amazing industry and excellent tact of the conductor, Mr. Stonhill, is apparent even on a superficial glance over its pages."—*Mackellar, Smiths & Jordan* (Phila.).

"The recognized organ of the Paper and Printing Trades."—*Belfast News-Letter.*

"It has features of enterprise unusual to European Trade journalism."—*American Stationer.*

"The notes upon Trade cover the entire country and the Colonies."—*London Figaro.*

"There is an American touch about the paper."—*Leigh Chronicle* (Eng.).

"In the matter of printing it is PERFECT."—*W. and A. K. Johnston* (Edinburgh).

"The very best journal of its class that finds its way to our table."—*James D. Whitmore & Co.* (N.Y.).

Advertisers will see that it is better for them to pay fair charges to a Journal which covers the whole of the commercial world, than to pay less sums for advertisements in journals whose circulation is limited to one country, one town, or possibly one parish.

JAMES A. WHITNEY,

COUNSELOR-AT-LAW.

Special attention given to Patent and Trade-Mark Causes.

140 NASSAU ST., NEW YORK CITY, U.S.A.

JAMES A. WHITNEY,

Solicitor of United States and Foreign Patents and Trade-Marks,

No. 140 Nassau St., New York City.

American, Canadian, British and Continental Patents obtained for Inventors on favorable terms, and in the shortest possible time. Caveats filed, Reissues and Design Patents secured, Trade-marks and Labels protected by registry at the U. S. Patent Office and in Canada and Europe, Rejected Cases investigated and reported upon, Interferences conducted, Opinions on Questions of Infringement, the Validity of Patents, &c., &c.

PERSONAL attention throughout is given to each and every case—a matter of no inconsiderable importance to those who wish STRONG CLAIMS and specifications CAREFULLY DRAWN. Business may be transacted either in person or by mail, and in every detail is kept inviolably SECRET and CONFIDENTIAL.

JAMES A WHITNEY, 140 Nassau St., N. Y. City.

TO IMITATE MAHOGANY.

This could be best effected with burnt sienna and vandyke brown, ground in water, and thinned with weak size, so as to flow very freely. Then take a damp cloth or rag and wipe off the way of the grain. The depth of the color will be given by the appearance after wiping. When the rag is wet, squeeze it out into the color, and so effect a great saving of it ; when dry, size and varnish, or polish. In some cases the color must be left on and softened with a badger, instead of wiping off. For oak : 7 lbs. yellow ochre, 1 lb. English umber, and a little Venetian red, as above. A more difficult process is as follows : Upon an orange ground run in with vandyke brown, burnt sienna, and rose pink (ground in water), thinned with beer to about the depth of color required. Soften it slightly all over with the badger's hair softener, then take a piece of Turkey sponge and wipe some light streaks the way of the wood, and let them slightly fold over so as to have somewhat of a Honduras appearance, then soften up and down rather smartly at first, and gently after, to give somewhat of a finished appearance, and when to be left for Honduras stipple all over with the ends of the badger, and it is done. But if Spanish is intended, after wiping out with the sponge and softening gently the way it is sponged, then very gently soften across, then take a chisel-edged camel-hair mottler, well soaked and wiped clean on the dry sponge, and dot it with the corner down the edges of the sponge marks, and here and there; then holding the mottler between the thumb and fingers, roll it between two or three of the dotted parts, and soften immediately, and observe the effect, avoiding the objectionable parts next time, but keep the figure toward the centre of the panel and the sides plainer. Take care that it is all left soft. When dry take a mahogany hog's-hair overgrainer, about four inches wide, and a little of the same color, thinned with water, and work it up together in a saucer, and pat it at the side so as not to take too much color, then with a coarse haircomb comb the overgrainer out and draw over the work, carefully following the sponging ; then very slightly soften toward one side, so as to raise the grain very slightly, and when dry it is ready for varnishing.

PARCHMENT PAPER IMPERVIOUS TO WATER.

According to the *Journal Society of Arts*, a strong, impervious parchment paper is obtained by thoroughly washing woolen or cotton fabrics, so as to remove gum, starch and other foreign bodies, then to immerse them in a bath containing a small quantity of paper pulp. The latter is made to penetrate the fabric by being passed between rollers. Thus prepared, it is afterward dipped into sulphuric acid of suitable concentration, and then repeatedly washed in a bath of aqueous ammonia until every trace of acid has been removed. Finally, it is pressed between rollers to remove the excess of liquid, dried between two other rollers which are covered with felt, and lastly calendered.

THE UNDERSIGNED WISHES AN ENGAGEment with a First-class Book and Stationery House, Fancy Goods or Toys, either on the road, or will take management of either branch, in which he has had fifteen years' experience. Address R. A. GRIFFITH, Stationer, Des Moines, Iowa.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

FASHIONS IN WALL-PAPER.

Wall papers, dados and friezes are especially adapted to harmonize with upholstering fabrics. For dining-rooms and libraries a wall-paper in English-Gothic style shows blocks of embossed gold alternating with medallions of a drap ground and tall golden lilies and sprays of olive green. A cloth-of-gold embossed ground has designs of pale olive shaded roses and butterflies; the dado has a gold embossed background set in alternate panels of griffins, jars, and a *fleur-de-lis;* the frieze is divided in three parts, and shows the fable of the stork and fox in browns and dark red with an out-lining of white, and black, and gold. A drawing-room paper has a gold embossed ground covered with shaded white flowers and graceful vines trailing over a trellis of white and gold. A light drab ground has golden lilies and curving leaves drifting over it. The frieze has a sage ground, with flowers in warm brown shades; arabesques and scrolls and leafage cover the gold and drab ground of the dado. An ashes-of-roses ground is blocked in gold and white, and gold with flamboyant traceries in re-relief. For a hall the same landscape designs and colors are repeated, as described, in crêpe cloth drapery. Another style for halls has a background blocked with drab, pomegranate red, and gold outlined with olive; the dado is three feet from the floor. For chambers and dressing-rooms wall-papers have ivory tinted grounds, where long, graceful vines of morning glories, pink, purple and blue, drift across; here and there a cluster of crumpled pinks and mingled with pale harebells and nodding columbine.

In striving to fashion a nice puppet, many mothers have forgotten to make a man.

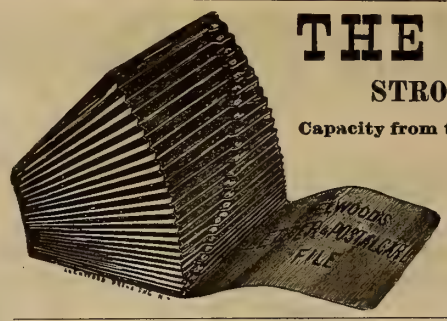
GILDING IN OIL.



In order to make good work in oil gilding there are several indispensable conditions which must be observed. First, a smooth ground. Second, gold size free from grit or skins. Third, in putting oil gold-size on the work it must be dross black, ground in turpentine, and mixed with boiled linseed oil and a small piece of dryers; well sand-paper again, when this coat is dry. And now for the finishing coat of color, which should be flat, *i. e.*, mixed with turpentine and a few drops of japanner's gold-size, but no oil. The dross black should be first ground in turpentine and the gold-size added after. When this has dried, varnish with hard drying oak varnish, leave for a day or two, and then rub down with pumice-stone powder, sifted through muslin ; use a piece of cloth or felt wrapped on a small block of wood, and first wet the surface to be rubbed with water ; dry with a wash-leather and re-varnish. The ornaments are generally done with stencil patterns ; and the lines are done with straight-edges and lining fitches.

Stencil patterns can be cut out of card paper. Before using give a coat or two of patent knotting. For gilding panels give a coat of buff first, then a coat of gold-size, in oil. When this has dried just sticky, press the gold leaf upon it with a ball of wadding, and leave for five or six hours, then rub over with a piece of soft wadding, and wash well with a sponge and cold water. The gold will not need any preparation before painting on, but if varnished afterward use pale varnish. Screens should be painted in colors to match the rooms they are intended to be used in. Birds, flowers and animals are the subjects generally introduced for this purpose. Birds should be painted toward the top of the screen, animals, flowers, &c., in the centre or at the bottom.

TO TEST GLUE.

An article of glue which will stand damp atmosphere is a disideratum among mechanics. Few know how to judge of quality except by the price they pay for it. But price is no criterion ; neither is color, upon which so many depend. Its adhesive and lasting properties depend more upon the material from which it is made, and the method of securing purity in the raw material, for if that is inferior and not well cleansed, the product will have to be unduly charged with alum or some other antiseptic, to make it keep during the drying process. Weathered glue is that which has experienced unfavorable weather while drying, at which time it is rather a delicate substance. To resist damp atmosphere well, it should contain as little saline matter as possible. When buying the article, venture to apply your tongue to it, and if it tastes salt or acid, reject it for any thing but the commonest purpose. The same operation will also bring out any bad smell the glue may have. These are simple and ready tests, and are the ones usually adopted by dealers and large consumers. Another good test is to soak a weighed portion of dry glue in cold water for twenty-four hours, then dry again, and weigh. The nearer it approaches to its original weight the better glue it is, thereby showing its degree of insolubility.

Official reports, just received, state that the Atlas Engine Works, Indianapolis, Ind., have been awarded the highest premium, with gold medal, over all competitors by the Michigan State Fair, at Jackson, Mich., for the best slide-valve engine on exhibition.

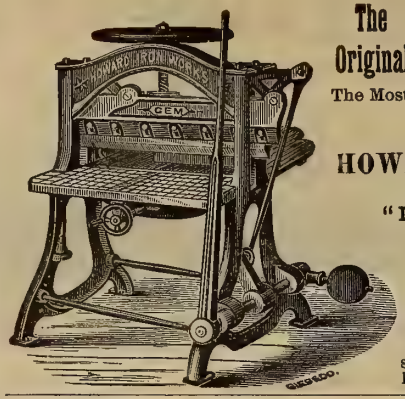
THE CONDITION OF TRADE.



A report issued on Tuesday from Dun's Mercantile Agency shows the failures in the United States for the three months ended September 30, 1882, to have aggregated 1,300, with total liabilities of $18,942,893. This is an increase on the number of failures over the corresponding quarter of last year of 376, and an increase in the amount of liabilities of $8,830,528. During the nine months of the year the total number of failures has been 4,897, and the liabilities $69,523,813. The figures during the first nine months of 1881 were: Total number of failures, 3,890; amount involved, $51,059,010, showing an excess of liabilities this year of over $18,000,000. The excess of increase liabilities is principally in the Middle and Western States. In the Middle States the increase is entirely due to failures in this city, the failures in the other parts of New York State having been below the average both in number and in the amount of indebtedness. An improvement occurred with the opening of the spring trade, and this has very generally continued. Many of the failures which swell the figures of the last three months of this year are reported to be due to speculation or outside operations. Consequently, while these losses fall largely on those engaged in legitimate business, they cannot properly be charged to the condition of trade. The Mercantile Agency circular, giving the figures quoted, asserts that the prospects for the closing months of the year are generally good. The same relative condition of affairs is shown in the Dominion of Canada. There the number of failures for the past three months was 166 and the amount involved $1,715,982. The figures for the corresponding quarter last year were: Number of failures, 130; liabilities, $787,889.

A WASH FOR WALLS.

A German paper gives a formula for a wash which can be applied to lime walls and afterward become waterproof so as to bear washing. Resenschek, of Munich, mixes together the powder from 3 parts silicious rock (quartz), 3 parts broken marble and sandstone, also 2 parts of burned porcelain clay, with 2 parts freshly slaked lime, still warm. In this way a wash is made which forms a silicate if often wetted, and becomes after a time almost like stone. The four constituents mixed together give the ground color, to which any pigment that can be used with lime is added. It is applied quite thickly to the wall or other surface, let dry one day, and the next day frequently covered with water, which makes it waterproof.

This wash can be cleansed with water without losing any of its color; on the contrary, each time it gets harder, so that it can even be brushed, while its porosity makes it look soft. The wash of calcimine can be used for ordinary purposes as well as for the finest painting. A so-called fresco surface can be prepared with it in the dry way.

ETCHING ON GLASS.—Etching on crown glass is a very simple process. The glass is first heated in a sand-bath and then rubbed over with purified beeswax, the temperature being such as to cause the wax to melt completely and uniformly over its surface. When every part of the plate is covered with wax it may be set aside to cool. A paper having the design boldly drawn upon it may then be attached to the unwaxed side of the glass, and the workman traces the lines through the glass by a pointed instrument, care being taken that the point clears all the wax from the glass, wherever the design comes.

The Original "GEM" Paper & Card Cutter

The Most Simple, Durable, and Perfect HAND MACHINE made. No other Hand Machine equal to it.

"ABROAD."

Owing to the great success of **"At Home"** last season, we have this year issued the **New Art Gift Book—"ABROAD"**—for the Holidays; to be of uniform size and a companion piece of **"At Home."**

"Abroad" far surpasses its companion both in **Decoration and Illustration.** Each page being a study in itself. The quaint little English Children are in this Book represented on a tour of pleasure through France. Those who have been "Abroad" cannot fail to recognize the beautifully executed drawings of places of interest. The appropriate verses accompanying each illustration make this work a handsome memento and Holiday Gift. Decorated by THOS. CRANE. Illustrated by ELLEN HOUGHTEN.

Price, $2.50. "AT HOME" published this year at $2.00.

BYRON WESTON

DALTON, MASS., U.S.A.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD & LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot. Each sheet is water-marked with name and date.

Correspondence.

CINCINNATI TRADE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, October 9, 1882.

The outlook is as clear now as a Rocky Mountain atmosphere on a bright sunny day. The corn everywhere is ripe and hard, and nearly everywhere in this region is cut and shucked. By the end of this week the enormous crop of tobacco in this region will be housed. It is wealth. Sometimes a single acre yields $500 worth, and one man is enough to cultivate four and a half to five acres. A yield of $250 to $300 per acre is very common. The acreage this year in the nine great tobacco counties of Ohio, Kentucky and Indiana on the Ohio River and its tributaries is estimated at more than double that of any previous year. The only material left for howlers is the prospect for next year's wheat crop. It is growing late now for sowing this fall and the weather is a trifle dry for early-sown wheat—only a trifle dry, but a trifle is sufficient for the chronic croaker.

All this means—the trifle of dryish weather notwithstanding—splendid trade prospects for Cincinnati. There is "society" in Kentucky as well as in Indiana and Ohio, and "society" has use for fancy stationery, and a taste for it is growing every day. The city shop windows are brilliant to-day with artistic work in this line. Better as to quality and more diverse as to variety never was shown. With rich crops and the money they bring, this class of goods will surely have a run this fall. Dealers here think so, and are providing more bountifully for it than ever before.

The election year, with its queer mixture of questions and complication of issues and its enigmatical character in Ohio, has made the demand for newspapers pretty lively for the past few weeks. The abundant crops and the daily increase of the number of youth growing to years of discretion and trained to a love for reading by such school-books as Van Antwerp, Bragg & Co. publish, will increase the demand for both books and newspapers. The paper mill owes a debt of gratitude to the school-house and the schoolmaster, and school-houses and schoolmasters are increasing in Ohio, Indiana and Kentucky—notably in Kentucky. Thirty-three years ago the seed of the present Ohio free-school system was planted in a law made specially for Akron, Ohio, a Western reserve town, which has since become a law for the whole State. It's worth a man's trip to Ohio to see what that small beginning has wrought in a generation. The consumption of book, news and writing paper in Ohio per capita annually must be tenfold now what it was then. This is no joke, whim or vision. It is a solid, eloquent fact. A traveler looking out of a railcar window can gauge the capacity of a region for the consumption of paper and paper products, and its intelligence and culture, by one and the same indications—those shown in the appearance of the habitations along the highway and in the countenances of the groups at the country stations and town depots. In this respect Ohio, Indiana and Kentucky in the Cincinnati will make a good showing.

The trade in books of general literature with Robert Clarke & Co. will show it; the trade in school books with Van Antwerp, Bragg & Co. will show it. That business is driving, not madly but briskly and considerately, but solidly and steadily, the demands for commercial stationery on Wilstach, Baldwin & Co., on A. H. Pounsford & Co., on W. B. Carpenter & Co., on Mallory & Webb, on William Skinner, on C. T. Woodrow (who had a beautiful show in the Exposition), on C. F. Bradley, on Van Antwerp, Bragg & Co. (blank books), on Robert Clarke & Co., will bear witness.

The Lockwood Press will unite with the splendid job-printing establishments in bearing testimony that the trade in and around Cincinnati appreciates the value of printer's ink when judiciously applied in the newspaper press or in artistic job work. In fact, here in Cincinnati the finer grades of job printing never were in so much demand among consumers as now—they will have nothing else. The demand for presses here—those of the latest and most improved style for job work—is strong this fall. Manufacturers are increasing their facilities. Then as to evidences of propensities of people to write and to indulge in writing luxuries, nothing could be stronger or more convincing than the increase of the demand for John Holland's pens and pencils, which is scarcely less astonishing than the variety of styles in pens he is making and the taste and invention he displays in fancy work in holders and in charm pencils.

Holland shone in the Exposition like a lone star of heroic size. The display of printing stationery goods was not what it ought to be in quantity and brilliancy. In quality it was good. Here are some of the awards:

CLASS 54—BOOKS, STATIONERY, PRINTING, BINDING, PAPER, &C.

Best Blank Books, Ruling and Binding—W. B. Carpenter & Co.; silver medal.

Best Wood-Engraving for Business Purposes—R. J. McFee & Co.; bronze medal.

Best Class Journalism and Commercial Printing—Howard Lockwood, New York; bronze medal.

Best Removable Book-Binding—P. N. Hall, city; bronze medal.

Best Christmas Cards Set with Silk—American Paper-Box Manufacturing Company, Nashville, Tenn.; bronze medal.

Best Display of Paper Boxes—American Paper-Box Company, Nashville, Tenn.; silver medal.

CLASS 54.

Best Chromo-Lithographing on Glass—Wells & Hope Company, Philadelphia, Pa.; silver medal.

Best Show-Card Printing on Metal—Wells & Hope Company, Philadelphia, Pa.; silver medal.

Best Chromo-Lithographic Printing—V. L. Ward & Brothers; bronze medal.

The premium list for printing, stationery, engraving, and the like, is narrow, effective and incomplete, and it is the fault of the stationers, printers and engravers that it is so. If Eastern stationers desire to hold their trade in the West and South, not to say increase it, they will be obliged to respect the Cincinnati Expositions, and make use of them.

PRINCE WILLIAM.

DAYTON TRADE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, Ohio, October 9, 1882.

Long continued fine weather and the safety of the crops has made business this fall a steady, even trade. The demand for goods, especially the better grades, is very heavy. A prominent jobber told me to-day that he could not get enough of the better grades of goods to fill his orders, while his shelves were filled with the cheaper grade that there was no demand for. This seems to be especially the case in the stationery trade.

Within the past week or two the arrivals of representatives of Eastern stationers and manufacturers have not been very numerous. Mr. Koch, of Koch, Sons & Co., is taking a rather supplementary trip, picking up some sorting-up orders. Mr. Devenger, with Selchow & Righter, reports a very heavy demand in the specialties controlled by his house. Mr. Bennett, with Willy Wallach, is taking advance orders on valentines, imported and domestic. The representatives of Nagle & Co., Birnie Paper Company, Nescochague Paper Company, McCready & Co. and Cooke & Cobb, have also recently paid our city a visit.

G. W. Holden has just returned from New York, and reports that he has purchased some mighty pretty goods for his holiday trade. John H. Thomas leaves to-morrow night on a similar errand.

The United Brethren Publishing Company has recently extended its room and put in a large

stock of books, stationery, &c., and makes a very pretty display.

Dubois & Giorgio have opened out an exclusive wall-paper house, and report a good trade in their new venture. The introduction of the cheap so-called "Cartridge" paper in various shades, bids fair to lessen the demand for the gorgeous designs so common in wall-papers in the last few years, as any common wrapping mill can make this paper. It looks as if the inside decoration of our walls ought not to cost about as much as the walls themselves. The common use of bituminous coal makes the expense of renewing smoke-begrimed walls a very heavy burden, and any substitute that will tend to lessen the cost of papering our houses will be gladly welcomed in the MIAMI VALLEY.

ORIENTAL CARPETS.

Wentworth Buller has been for some two years making investigations into the history and modes of manufacture of Oriental carpets, both ancient and modern, and gives the results in a late number of the London *Art Journal*. Until these investigations began, he had supposed all carpets to be of wool, and for a year or more sought in vain to imitate a Persian carpet, till at last having recourse to a microscope in order to ascertain the real material of the finest specimens, he found that the hair of four animals had been used. These were the common and the Bactrician camel, the yak and the long-haired goat. It became clear at once why English attempts to imitate Oriental carpets had failed, it being impossible to produce the same effect from two distinct materials. It was also made clear why a Persian rug in use for years will show no signs of dirt or grime, while a carpet with long wool is soiled in a season.

The stiff goat's hair cannot retain grime, while dust shakes off from it at once. The finest hair is difficult to obtain, and equally difficult to dye and spin, but it forms the larger part of the finest carpets, the colors of which are unaltered after several hundred years of use. Mr. Buller finds the chronology of carpets quite as easily settled as that of illuminated manuscripts, each century having its own types of ornament. A Persian carpet of the fourteenth or fifteenth century is a real work of art, having the same relation to an ordinary carpet that a picture of Titian has to a third-rate canvas in an auction room. Then workman and designer were one, and the distinct separation of the two to-day is one reason for the failure in reproducing anything even approaching the old forms in merit. One carpet described in full required ten hours a day for twenty years, and could not be manufactured to-day for less than $20,000, and the carpets of the "fine period" have many of them 500 to 775 stitches to the inch, being worked on silk warps, with often the introduction of gold or silver thread.

INK FOR WRITING ON GLASS.—The following is a practical recipe: Mix barium sulphate, 3 pints, ammonium fluoride, 1 pint, sulphuric acid, *q.s.*, to decompose the ammonium fluoride, and make the mixture of a semi-fluid consistence. It should be prepared in a leaden dish, and kept in a gutta-percha bottle.

WALNUT STAIN.—For pine, poplar, or maple wood use: Water, 1 quart; washing soda, 1½ ozs.; Vandyke brown, 2½ ozs.; bichromate of potash, ¼ oz. Boil for ten minutes, and apply with a brush, in either hot or cold state, diluted with hot water, if necessary.

INLAYING.

When satin-wood was popular as a furniture wood, inlaying became a means of setting off its delicate color and strengthening its effect. Simple woods, in brightest colors attainable in nature, or dye, were used, and patterns of a primative character followed. Tulip, zebra-wood, rosewood, or purple wood were favorites, and deservedly so, for with them the necessity of dye was not felt. Ebony and ivory were more or less used, ebony we might say, extensively, and specimens of work bearing these inlays are often met with to-day.

The process of inlaying became so expensive, that imitations were freely made, with which persons of ordinary means might apparently possess the same luxuriant and costly articles as their neighbors, at little real expenditure. Staining and painting came more generally into favor, and was made so perfect that it soon commanded a figure that compared very well with the prices of that which it had come to replace, and was adopted by the fashionable world as a more chaste and elegant means of ornamentation than the former. Naturally, this decoration gradually became distinctive, and when its hold upon the tastes of the people had become so certain as to give it a value based upon its own merits, all attempts at imitation of inlay were discarded, and in the beautifully colored panels of the French school we find an absolute individuality of treatment and characters defined, that would be impracticable for the limited possibilities of the more real work.

The fallacy of this preferenee, however, was of course, short-lived, and the lasting qualities of real wood overcame the transient beauty of pigments. Riesner, Roertgen, Heppelwhite and Sheraton, brought marquetry again into prominence, and royal commissions enabled them to produce such specimens, as would go far toward convincing the advocate of paint, if there were any in truth, that their choice was founded more upon delusion than fact.

CUTTING GLASS.

Mr. Fahdt, of Dresden, uses metal wires, which have been made red hot by electricity, for cutting glass. The apparatus consists of two screws which are fastened on a plate at a distance from each other varying with the size of the object which has to be cut. The screws are in communication with the poles of a battery, and carry at their tops a metallic wire, which is placed round the object which has to be cut. The glass is carried by supports. When the circuit is closed the wire becomes red hot, and the places where the wire touches the glass (the glass can be turned round by hand) become heated, so that by sudden cooling, or the contact with a humid body, a severance of the glass takes place. In order to remove the inequalities on the sections which have been thus obtained, the glass pieces are placed on an apparatus, in which the section is exposed to the flame of a chalumean, the glass piece being made to revolve, in order that all the parts are touched by the flame. The glass is then taken to a heating furnace, in order to prevent the heated parts becoming broken by too quick cooling. The glass is then removed to a room where it is left to cool.

THE AWL OLDER THAN THE NEEDLE.

The awl is thus described: A pointed, piercing instrument in common use and of great antiquity. It is evidently older than the needle, which has not yet surpassed its use, though it has supplanted it in ordinary sewing. The hides which covered the osier framework of the coracle of the ancient Briton, and the birch bark which covers the canoe frame of the Chippewa Indian, were and are sewed into place by means of the awl, which opens the way for the thong or deer sinews. The awl is referred to in Exodus xxi. 6, and Deuteronomy xv. 17, where a Hebrew servant, who refused to leave his master when his sixth year of bondage was completed, was brought to the door-post and his ear bored through with an awl, after which he became a slave for life. The Egyptian awl of the time of Thothmes III., contemporary of Moses, is shown in a Theban tomb. The pointed instrument was placed in a nearly spherical handle, to fit the palm of the hand. An awl differs from a needle in this, that one is attached to a handle and is retroacted, while the other passes through the article and carries the thread which is attached to it.

BRONZE MIXTURE.—H. H. Vivian adds antimony to the mixture for bronze. One mixture is 93.81 parts copper, 5.95 tin, and 0.24 antimony. For a bronze for shaft bearing the proportions are 83 parts copper, 15.5 tin and 1.5 antimony.

Joseph Athias was the son of Tobias Athias, who were both famous printers. Their printing house was in Amsterdam. The father printed a Spanish Bible for the use of the Jews. The son published a Hebrew Bible in 1661, and again in 1667, in two vols. 8vo, both printed under the supervision of the learned John Leusden. For the latter, which is considered the most accurate, the States-General presented him with a chain of gold and a gold medal pendant. Of the edition of 1661, 3,000 copies were struck off, and were the first printed copies of the Hebrew Bible in which the verses were distinguished by Arabic numerals. It is also affirmed that Joseph Athias printed an immense number of English Bibles, and actually ruined himself by attempting to "keep standing," for many years, all the "forms" of type of a large English Bible. But this is doubtful. He is supposed to have died in the year 1700.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW PATENTS.

No. 264,854. Stylographic Fountain Pen.—Francis C. Brown, New York, N. Y.

The combination, in a stylographic fountain pen, with the point-section of the spring-frame or yoke retained in position within the point-section by the jaws of the yoke impinging against the sides of the bore of the point-section needle, or point-clearer passing through the lower portion of the yoke, and having a stop above and below the yoke to limit its movement and spring around the needle for reacting the same.

No. 264,878. Bookbinding.—Herman H. Hoffmann, Chicago, Ill.

No. 264,888. Charm for Watch Chains.—Benedict B. Lederer, Providence, R. I.

No. 264,916. Addressing Machine.—Peter York, Geneva, and George V. Uhl, Bellona, N. Y.

No. 264,931. Exercising Ball for Athletes or Gymnasts.—Hiram B. Cook, San Francisco, Cal.

No. 264,947. Suspension Device.—Henry R. Heyl, Philadelphia, Pa.

No. 264,972. Paper-Cutting Machine.—Charles E. Torrance, Holyoke, Mass. (Model.)

1. The combination, in a paper-cutting machine, of two receiving-rolls, adapted to revolve at a uniform rate of speed, for receiving a continuous web of paper and delivering it therefrom at a uniform rate of speed to the cutting mechanism, a fixed bar, and a movable stop-bar adapted to be moved against the fixed bar independently of the movable knife to stop the web of paper at regular intervals in its movement from the receiving-rolls, an adjustable take-up roll to take up the slack paper between the receiving-rolls and the stop-bar, feeding-rolls for feeding the web of paper to the knife, and a movable knife operating in connection with a fixed knife, whereby the web of paper is moved uniformly from the receiving-rolls and is moved intermittently to the knife, and sheets of any desired uniform length are severed therefrom. 2. The combination, in a paper-cutting machine, of two receiving-rolls revolving at a uniform rate of speed for receiving a continuous web of paper from a paper machine and moving it uniformly to the cutting mechanism, stop-bars for stopping the movement of the web of paper while sheets are being cut therefrom, supporting-rolls for supporting and holding the slack paper between the stopping-bars and the receiving-rolls while the web of paper is stopped to be cut, and two feeding-rolls on the other side of the stop-bar, all combined, for moving the web of paper intermittently at a uniform rate of speed to the knife, for having sheets of uniform size cut therefrom.

No. 264,974. Stylographic Fountain Pen.—Jacob Ullrich, Hoboken, N. J.

1. In a stylographic fountain pen, the combination, with the barrel and fixed air tube extending through the same, of a detachable end tube having an interior spring-pressed valve actuated by the shank of the needle valve. 2. In a stylographic fountain pen, the combination of the barrel, fixed end plug having an air-opening and a fixed guide pin, an interior air tube, and a vent-cap having a guide slot and interior friction spring, the vent-cap being adapted to turn on the end plug, so as to establish or interrupt the air supply to the air tube.

No. 264,995. Book-Holder and Arm-Rest Combined.—John J. Armstrong, Jr., Brooklyn, N. Y.

No. 265,017. Printing Block.—John E. Caps, Cincinnati, Ohio, assignor to Marie Caps, same place.

A block having a printing surface of paper treated with albumen, beeswax and plumbago.

No. 265,029. Printing Machine.—John H. Cranston, Norwich, Conn.

No. 265,036. Gauge for Book-Maker's Table Shears.—Edward P. Donnell, Chicago, Ill.

No. 265,045. Call Bell.—J. Yale Fairman, Middletown, Conn.

No. 265,057. Embossing-Machine.—George W. Garnar, Flushing, N. Y.

No. 265,101. Tag or Ticket Number Printing Press.—John Keller, New York, N. Y.

No. 265,110. Combined Stereoscope and Graphoscope.—W. H. Lewis, Brooklyn, assignor to E. & H. T. Anthony & Co., New York, N. Y.

No. 265,061. Letter and Figure.—John Gunning, New York, N. Y., assignor of one-half to A. M. Ingersoll, same place.

As an improved article of manufacture, letters and figures made of enamel baked on copper or other metal plates.

No. 265,193. Device for Holding the Fingers in Writing.—Claude Ivy Wallis, Memphis, Ala.

A device for holding the fingers in writing, consisting of a stock or frame for holding the forefinger united with a stock or frame for holding the remaining three fingers.

No. 265,207. Toy.—Charles C. Wurst, St. Louis, Mo., assignor of one-half to Mathew Moosmann, New Orleans, La.

No. 265,208. Toilet Stand.—Richard D. Young, New York, N. Y.

A perfume stand, consisting of a miniature wheelbarrow the body of which is composed of on ornamental supporting frame and of a filling-piece provided with a central recess for the perfume bottle and side recesses for pin-cushions, the filling-piece being covered with velvet or other suitable material.

No. 265,209. Automatic Feeder for Perforators.—Frank Anderson, Peekskill, N. Y., assignor to the American Rapid Telegraph Company, of Connecticut.

In a machine for perforating telegraphic paper, a curved guide, a feed-lever pivoted concentrically therewith, mechanism for operating the lever, and an automatic clamp adapted to the curved guide, operated by a lever.

REISSUES.

No. 10,207. Slate Frame.—Harry C. Goodrich, Chicago, Ill. Original No. 188,792, dated March 27, 1877.

No. 10,210. Toy Pistol.—Benjamin Haviland and George P. Gunn, Herkimer, N. Y., assignors, by mesne assignments, to Henry M. Quackenbush, same place. Original No. 126,954, dated May 21, 1872.

DESIGNS.

No. 13,313. Font of Printing Type.—James M. Conner, New York, N. Y. Term of patent, 14 years.

No. 13,314. Toy Bank.—Charles M. Henn, Chicago, Ill. Term of patent, 7 years.

No. 13,315. Printing Type.—Charles E. Heyer, Chicago, Ill., assignor to Arthur M. Barnhart, Alson E. Barnhart, and Charles E. Spindler, same place. Term of patent, 14 years.

No. 13,322. Alphabet.—Frederick W. Miller, Newark, N. J. Term of patent, 3½ years.

TRADE-MARKS.

No. 9,699. Fountain Pen.—Warren N. Lancaster, New York, N. Y.

"The pictorial representation of two crossed fountain pens, in connection with the arbitrarily-selected words 'The Lancaster Government.'"

An evil speaker differs from an evil doer only in the want of opportunity.

MOIST PAD AND PAPER-WEIGHT.

A novel moist pad and paper-weight combined has been patented by E. W. Archer, of Boston. The pad, formed of woody fungus, touches or rests upon a column or post of the same material rising vertically from the bottom of the water chamber. The pad is inserted in a detachable rim, and forms a top of the cup or water receptacle. The bottom of the water cup is weighted or made of glass or some other heavy material, so that it may be used for a paper-weight. The resiliency of the pad is increased by subjecting it to heat while the porosity of the substance is not diminished. The water is not applied directly to the pad, but is first put into the cup of the moistener, and it then ascends the post and is conducted to the pad and evenly distributed through it and over its surface in sufficient amount to moisten the fingers for the counting of bills or other papers, as well as to moisten stamps, labels and envelopes.

Another decided advantage obtained from the use of this material for the moistener pad is that so long as there is any water at all in the cup it will, as a result of capillary attraction, be drawn through the post to the pad, and will at all times lie evenly upon the upper surface of the pad, whether the same is in use or not. It does not require constant replenishing with water, as do all other moisteners now in use. The substance used retains moisture longer than sponge or any material we have ever before known.

ENVELOPE AND POSTAL-CARD CASE.

J. C. Lane, of Elkhart, Ind., has lately produced a novelty in the shape of a postal-card and envelope case. The case is divided into any number of compartments by means of partitions, and has vertical grooves in the sides near the front. A rack of wire is bent midway of its length, then upward and outward, and has its ends bent to form hooks for engagement with the grooves. A roller is placed on the inclined part of the rack behind the envelopes, and serves to support them in an upright position and to slide them down toward the front of the case as the front envelopes are removed. For the purpose of placing envelopes in the rack the hooks are released from the grooves, which allows the rack to be withdrawn and replaced. The V-shaped wire has its end made into hooks. The wire being held with its apex upward, the hooks are engaged with the horizontal portions, and the apex then turned downward, which has the effect of pressing the upright portions toward each other. The advantage of the invention as a holder for different sizes of envelopes or postal cards and different denominations of stamped envelopes, is that it presents the face of the envelope to the view of the user, which is not done in pigeon-hole cases. Consequently, mistakes are not made by taking an envelope from the wrong pigeon hole.

TEST FOR GOLD-LEAF.

A new test for gold-leaf was accidentally discovered lately, at the Farrell Venetian Art Glass Manufacturing Company's works, in Brooklyn. By the Farrell process the leaf is placed on the incandescent glass, which is then blown. The expansion splits the leaf into beautiful and fantastic forms, and the object is then fired, covering the glass with the vitreous material. In using a guaranteed .999 quality of gold-leaf the workman found that the expansion separated the gold from a copper alloy, and the object was ornamented with gold and a handsome green, the latter color being due to the oxidation of the copper.

WAGGENER'S

— IMPROVED —

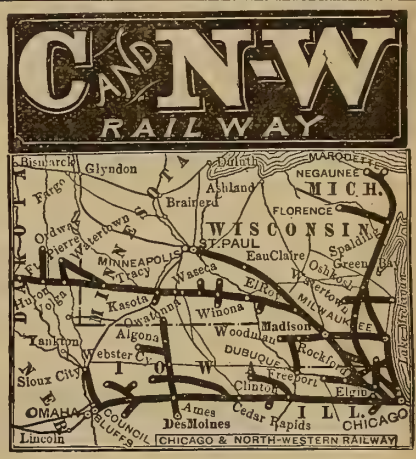
TRIAL BALANCE BOOKS,

IN FIVE NUMBERS.

WM. M. CHRISTY'S SONS, Publishers,

☞ Send for Price Lists. **PHILADELPHIA.**

THE attention of the trade is invited to **The * Christmas * Star** as a leaflet or card particularly suitable for sale during the Christmas Season. The publisher believes the shape, that of a star, is especially appropriate, associated as it is with the nativity of our Saviour. The designs are unique, and the lithography is executed in the highest style of the art. The poems were composed with special reference to the designs; and another feature which adds to the attractiveness of the Star is a carol set to music. Envelopes and protectors for mailing are provided. Trade supplied by CHAS. SCRIBNER'S SONS, C. T. DILLINGHAM, BAKER, PRATT & CO., AMERICAN NEWS COMPANY, ROBERTS & ROLLS, and by the PUBLISHER,



A. E. CHASMAR, 757 Broadway, New York.

PATENTS

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

T. B. Hanna, publisher, Ossian, Iowa, is dead.

T. C. Dean, printer, Park Hill, Ont., has been burned out.

L. M. Bryan, stationer, &c., Grand Island, Neb., has sold out.

W. H. Bennett, bookseller and stationer, Meridian, Miss., is dead.

Hinton & Co., booksellers and stationers, Waterville, Minn., has sold out.

Robert Gordon, dealer in fancy goods, Binghamton, N. Y., is advertising to close out.

Geo. P. Clark, bookseller and stationer, Meadville, Pa., is closing out his stock at auction.

Nims & Beach, publishers of the *Jeffersonian*, Lexington, Mich., have dissolved partnership.

Vincent & Overshiner, publishers of the *Calico Print*, Calico, Cal., have dissolved partnership.

The stock of A. M. Thiele, publisher of the *Humorist*, San Francisco, Cal., has been attached.

Marcus D. Boruck, publisher of the *Spirit of the Times*, San Francisco, Cal., has had his stock attached.

J. Friedman & Co., fancy goods dealers, Lewiston, Me., have dissolved partnership. Faibel Friedman continues.

The style of George H. Pond, publisher of the *Advertiser*, Caro, Mich., has been changed to George H. Pond & Co.

E. M. Hardy, printer, Edinburg, Ind., has admitted W. E. Hardy to partnership under the style of E. M. Hardy & Brother.

James D. Whitmore & Co. have a very large line of plush pepeteries, some with looking-glass effects and others in fancy plushes, which are very attractive.

The Elwood file, manufactured by the Buxton & Skinner Stationery Company, St. Louis, is commanding a ready sale. The file has been greatly improved in many respects.

Rees, Welsh & Co., booksellers and publishers, Philadelphia, Pa., have sold out the miscellaneous book department to David McKay. Rees, Welsh & Co. still continue as law book sellers and publishers.

Peter O'Donnell, the veteran and courteous stationer of New Orleans, La., was in the city this week visiting among his numerous friends and acquaintances all of whom were very glad to see him. One of the number had not met him for about ten years, and the occasion was a mutually pleasant one. It is said of Mr. O'Donnell that there are few if any men in the trade, at the South, better known or more highly respected.

Culver Brothers & Co., paper manufacturers and dealers at Syracuse and Pulaski, N. Y., have made an assignment to Edward Collin. The house has been established many years. It is reported to have had about $50,000 capital in the business, and is the principal owner of the Salmon River Paper Mills at Pulaski. Enoch B. Culver, the senior partner, died in January last, leaving his real estate and interest in the business to his daughter, the wife of James L. Collin, the junior partner.

E. & H. T. Anthony & Co. show a magnificent line of goods for the fall and holiday trade. It includes a large variety of albums in Russia, alligator and lizard leathers, and in figured and other fancy plushes, the embellishments in most instances being rich and the finish elaborate. In photo frames the designs are numerous and come in gold, plush, velvet, ebony, &c. Among other things shown is a large and rich line of jewel cases, toilet sets, odor cases, handkerchief and glove boxes, music rolls, whiskbroom holders, brackets and combination sets. All of these goods are produced in the same materials as the albums, and the fittings are of the best stock. Quite a variety of transparencies and Indo-tints in new subjects have recently been added. For the latter a rare selection of new frames, in oak and ebony, and tastely designed, has been introduced. The firm has in course of preparation a line of graphoscopes of the finer grade, and which will chiefly come in polished rosewood. Buyers wanting articles in any of these lines should see this firm's stock before placing orders.

Among the visiting members of the trade in the city during the past week were: R. Goldschmids, Washington, D. C.; B. B. Owen, of Owen & Moore, Clarksville, Tenn.; W. B. Burford, Indianapolis, Ind.; H. A. Smith, Rome; Geo. J. M. Dickey, of J. M. Dickey & Co., Newburg, N. Y.; Peter O'Donnell, New Orleans; W. S. Clark, Amenia Union, N. Y.; Mr. Stafford, of Stafford, Whetherby & Co., Brattleboro, Vt.; George L. Shivler, New Brunswick, N. J.; Mr. Reed, of John Wannaker, Philadelphia; W. E. Seebold, New Orleans, La.; Mr. Stuart, of Skeen, Stuart & Co., Chicago; C. S. J. Phillips, of Morton, Phillips & Bulmer, Montreal, Can., O. S. Coughlin and J. C. Eldridge, Binghamton, N. Y.

George A. Raisbeck is on the road with an additional line of Philip Hake's novelties, a new feature of which, and entirely original, is the satin orange-blossom wedding envelope and invitation. The design is a spray of orange-blossoms, cut from white satin, pasted and embossed on the flap of the envelope. Another new idea is plush flowers so arranged on a card that after the stem and leaves of the flowers are painted in, they form a handsome picture. One design already painted comes with each box as a guide to finishing the remainder of the dozen, each of which represents a different flower. These are especially adapted for lady amateur artists.

At the regular monthly meeting of the Board of Trustees of the Stationers' Board of Trade, on Monday, Charles J. Cohen, of Philadelphia, and Edward Bierstadt, of this city, were elected to membership. Applications for membership were made at the same meeting by the Japanese Fan Company, of this city; S. A. Maxwell & Co., of Chicago; Forbes Lithographic Company, of Boston, and the Birnie Paper Company, Springfield, Mass., which were laid over under the rules for one month, to be acted on at the next meeting.

J. Val. Koch and Fred. W. Horn, of Koch, Sons & Co., are both absent from the city on business for their house, their objective point being in the West. Both gentlemen were doing exceedingly well in taking orders, when last heard from.

The Acme Stationery and Paper Company is busy at work on new lines of tablets and other goods for the winter trade.

Halley & Richardson, printers, Lebanon, N. H., have dissolved partnership.

A. I. Prescott, dealer in fancy goods, Lynn, Mass., is closing out.

H. C. Lawhorn, publisher of the *Leader*, Las Animas, Col., has sold out.

A. J. Hess, publisher, Ortonville, Minn., has sold out to Jacob Brynildsen.

W. J. McCullagh, publisher, Bradford, Pa., has been sold out by the sheriff.

Mrs. F. M. Pierce, dealer in notions, Ashtabula, Ohio, has been burned out. Said to be insured.

Grant & Polk, booksellers and stationers, Fargo, Dak., have dissolved partnership. D. F. Polk succeeds.

The Hayward Printing House (Matlack & Harvey), Philadelphia, Pa., has been sold out by the sheriff.

W. C. Cowan is the only one of Philip Hake's salesmen not absent from the city, Mr. Raisbeck and his lieutenants, Soderbery and Wright, being on the road and doing very satisfactorily.

The J. O. Smith Manufacturing Company notifies the trade that the fire at its works on Thursday morning last destroyed only one building, and will not in any way affect the prompt filling of all orders for its goods.

News comes from Luzerne, N. Y., that Thomas Garner & Co. have been obliged to absorb a saw-mill and its dependencies in order to carry on a business which they have strenuously endeavored to keep within prescribed limits.

Coughlin & Eldridge is the style of a new stationery firm just formed at Binghamton, N. Y. The firm is composed of O. J. Coughlin and J. C. Eldridge. Mr. Coughlin has been in the news business and has taken Mr. Eldridge into partnership to conduct the general stationery trade. The firm has a new and commodious store.

Henry Levy & Son have received by recent arrivals large additions to their stock, among which may be found some of the largest and best dolls in the market, and which are intended to retail at low prices. Writing desks will be sold to the trade at prices that will leave a good profit, The firm's stock of gilt bronzes, china, plush, and silk goods is elegant and artistic. The house is offering a large line of general holiday goods, suited to the stationery trade, at figures which are said to be very reasonable.

Fred. J. Levy left for Europe on October 7, per steamer Germania, to arrange with manufacturers connected with the firm of Henry Levy & Son, toward bringing out new styles of goods for the trade of 1883. He is said to be well adapted to this, as he has a bright perception of the wants of the community, as well as a refined taste and good judgment. There is no doubt that he will fully succeed in his mission. THE STATIONER wishes him a safe voyage and a speedy return.

At the regular monthly meeting of the trustees of the Stationers' Board of Trade, held on Tuesday, the committee appointed some months ago to prepare a memorial of the late Willy Wallach, completed its duties by presenting to the board a crayon portrait of that gentleman by Landers, the arsist. The portrait was received on behalf of the board by George L. Pease, the president, with appropriate remarks. The engrossed resolutions, passed at the time of the death of Mr. Wallach and Mr. Slote, were on exhibition, and were directed by a vote of the board to be presented by the committees to the respective families of the deceased. The portrait of Mr. Wallach is admitted to be good by all who have seen it. The sum subscribed by the members of the board was about $500, which covers the cost of a duplicate of the above crayon to be presented to Mr. Wallach's family,

and a smaller picture to each subscriber to the fund.

Haight Brothers, booksellers and stationers, Maquoketa, Iowa have been burned out; loss, $500.

T. J. Shelton, publisher of the *Daily Times*, Wichita, Kan., has sold out to I. N. Stoutemeyer.

R. H. Knight, publisher of the *Akron City Times*, Akron, Ohio, has sold out to C. R. Knight and Ed. Myers.

J. J. Horton & Co., subscription book dealers, Indianapolis, Ind., have been closed up on a chattel mortgage for $2,000.

Hastings, Todd & Schanck have issued a new price list, *net*, of cut cards, and will hereafter sell such goods for spot cash at special low rates.

A. R. Schanck, late of the firm of Goodman & Schanck, has entered into partnership with Hastings, Todd & Co., and the new firm will be known as Hastings, Todd & Schanck.

The Passaic County, N. J., Democratic convention on last Thursday afternoon nominated James Inglis, Jr., for State Senator. He has been for years the leading stationery dealer of Paterson.

Sibell & Hyer, stationers and printers, 206 Pearl street, have enlarged their place of business, and have removed their presses and type to upper floors, reserving the first floor for select lines of stationery, &c.

Among the new goods shown by Nathaniel Bloom is a variety of rich Viennese, brass, olive wood, and plush goods, antique clocks, smokers' tables, odor cases, bisque figures, and artificial plants. The trade might find it to their advantage to see this line.

McCarty & Hasberg have just received a telegram from Europe stating that their second lot of ornamental and decorative art pieces has been shipped. The firm intends to exhibit it to customers in the warerooms, at 487 Broadway, on November 1. The house is very busy on the regular line of goods, and is working nights.

Warrants for the arrest of the firm of C. E. Chamberlain & Co., booksellers, Williamsport, Pa., were recently issued, and William E. Chamberlain was taken into custody, but it is said Charles E. Chamberlain has left the State. They are charged with obtaining books from firms in Philadelphia and New York, shipping them to Elmira, N. Y., and selling them there. Several creditors took steps to recover their goods, and the sheriff has replevined a quantity of books in Elmira.

Roberts & Rolls, 757 Broadway, are manufacturers, importers and jobbers of Xmas novelties, holiday souvenirs, &c. They carry complete lines of the goods of the most prominent English houses. This firm has brought out a "Patience" series of Xmas and New Year cards in antique design, which are novel and inexpensive. It has a handsome assortment of satin-fringed cards, one of which is peculiar and useful. This has a section of flower-pot standing out from the card, and a plant with flowers, hand-painted, on the satin face seems to spring from the flower-pot. The utility lies in the fact that the flower-pot is intended as a match-safe, and can be used as such. Sachets of all kinds are also shown. A set of cards with groups of children is very pretty and attractive. Roberts & Rolls also carry a full line of colored photographs of handsome and celebrated women, among them Mrs. Langtry, other members of English aristocracy and of different actresses.

J. H. Bufford's Sons show elegant new lines of birthday, Valentine and Easter cards. The birthday are among the most *recherché* lines of goods ever shown and contain selected designs from almost all of the manufacturers in Europe. The house has just introduced a line of small cheap chromos, which include hunting scenes, marine views, landscapes, &c. New series of advertising cards have also been brought out, one of which shows all of the fall fashions and is intended for clothiers' use. This series will probably meet with a great demand. The firm has added to its already large and varied stock a beautiful line of porcelain plaques richly bordered with plush.

The "Christmas Star" is a new leaflet or holiday card, published by A. E. Chasmar, 757 Broadway. The design is peculiarly appropriate, and the leaflet which contains several pages of verse, is cut in the form of a star, one of the features being a carol set to music. The covers are illuminated, and have appropriate emblems.

E. W. Rolls, of the firm of Roberts & Rolls, sailed for Europe last week in quest of novelties for the holidays, and he proposes to bring a wife back with him.

R. T. McLellan & Co., stationers, blank-book manufacturers, &c., Portland, Me., have been succeeded by McLellan, Mosher & Co.

A man cannot do good or evil to others without doing good or evil to himself.

CLOTH TRACINGS.

A correspondent of the *Moniteur Industriel* refers to the difficulties encountered in tracing upon cloth or calico, especially the difficulty of making it take the ink. In the first place, the tracing should be made in a warm room, or the cloth will expand and become flabby. The excess of glaze may be removed by rubbing the surface with a chamois leather, on which a little powdered chalk has been strewn; but this practice possesses the disadvantage of thickening the ink, besides, it might be added, of making scratches which detract from the effect of the tracing. The use of ox-gall, which makes the ink "take," has also the disadvantage of frequently making it "run," while it also changes the tint of the colors. The following is the process recommended: Ox-gall is filtered through a filter-paper arranged over a funnel, boiled and strained through fine linen which arrests the scum and other impurities. It is then placed again on the fire, and powdered chalk is added. When the effervescence ceases the mixture is again filtered, affording a bright colorless liquid, if the operation has been carefully performed. A drop or two must be mixed with the Indian ink; and it also has the property of effacing lead-pencil marks. When the cloth tracings have to be heliographed raw sienna is also added to the ink, as this color unites with it the most intimately of any, besides intercepting the greatest amount of light.

FOLEY'S PAT. IMPROVED STYLOGRAPHIC PEN.

Great reduction in price: No. 1, $1.75; No. 2, $2.50; No. 3, $2.50; No. 4, $3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, OCTOBER 12, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THE Lockwood Press has again carried off first honors. By referring to our Cincinnati letter in this issue it will be seen that the highest award of the Cincinnati Exposition for class journals and printing has been made to the publisher of THE STATIONER.

OLD swindles revive every now and then, and it becomes a duty to renew the warnings which have been given from time to time, so as to keep the trade alive to the frauds. We are told that there are some people going the rounds of the jobbing trade, buying goods on the pretense that they have an order for them and securing their delivery at a well-known store, where the pretended salesman claims them and defers payment with the excuse that the cashier is out, but that the money for the goods will be sent around to the seller. The result is that the goods are sometimes left with the buyer, and when this happens the seller may "whistle for his money." A trick of this character was tried this week, but it did not work. Inasmuch as this may be again attempted, the trade are warned to be on their guard.

CAUSES of complaint like those which exist here are prevalent in England, where the stationery trade claims to have ample reason for finding fault with the competition met with from "drapers." But in reply to its objections we find in a recent issue of the *Stationery Trades Journal*, London, a letter purporting to come from "a wholesale manufacturing stationer," which presents another side of the issue, and, if true, shows that the stationery trade in England lacks enterprise. The writer referred to alleges that his firm got out a taking novelty, which, when offered to the trade through the ordinary means, failed to attract the attention which it was thought to deserve, and as a last resort the thing was offered to a "drapery establishment," which took it unseen, giving a large order, which was followed up with an avidity that keeps the manufacturer behind his orders. On this statement of facts we can scarcely wonder that the manufacturer who makes this explanation should say, as he does, "At the present moment I don't care whether a single retail stationer has this particular article in stock or not. I am selling more than I can supply." But England is not America, and when it comes to enterprise, we believe that the members of the American trade are alive to every good thing, and are just as keen after a taking novelty as can be reasonably expected. When drapers, grocers and butchers take to making "leaders" of books and stationery, buying from publishers and manufacturers at the best trade discounts, and then sell almost down to, if not quite at cost, sometimes giving the goods away, remarks like those of the English correspondent do not apply. And, so far as we have been able to learn, this is the rule and not the exception in this country. The English trade have got to change their slow methods and take a quicker appreciation of the necessity of keeping up with the frequent changes of forms and fashions, and development of new ideas. To some extent, our own trade need the same quickening; but, as remarked, they scarcely need it. If they are wanting in enterprise, they must blame themselves for the evils with which they have to contend; but no one can find fault if they decline to deal with those who sanction competition of a, perhaps, temporary character, but which nevertheless strikes down legitimate trade.

ANSWERS TO CORRESPONDENTS.

T. V. C. asks: Do you know of anyone who makes cases or stands of any kind for holding perforated board, glazed papers, tissues, &c.

Ans.—We do not know. There is no specific form of case for such a purpose, and any good carpenter ought to be able to make one. Perhaps you might get one better to your liking if you designed it and had it made on your own pattern.

A. P. W., who asked about cigarette paper, is informed that a correspondent writes to THE STATIONER to say that specially prepared cigarette paper can be got from the mill of J. R. Crompton, Bury, Lancashire, England. The agent's address can be found in our advertising columns.

CHATTEL MORTGAGES.

The new postal money order, for a sum lesss than $5, will cost three cents, and the service is extended so as to raise the limit of orders from $50 to $100. Persons will not be required to fill out a blank, as at present, but will receive an order payable to the bearer at any money order office desired. The new notes are to be handsomely engraved, and in appearance will not be unlike bank notes.

THE LACQUER INDUSTRY OF JAPAN.

Among the Parliamentary papers recently issued is a valuable report by John J. Quin, acting British Consul at Hakodate, on the lacquer industry of Japan. This business is one in which the Japanese have always greatly excelled, besides which it has hitherto been almost a monopoly in their hands, owing to the high perfection attained and the rigid manner in which the secrets of the pursuit have been guarded. Mr. Quin's report now enables us to peep behind the scenes to some extent, but even after a perusal of his treatise it seems pretty plain that we do not know everything about Japanese lacquering, while the knowledge we thereby acquire adds strength to the conviction that there is little likelihood of the processes being successfully conducted out of Japan. In the first place, almost the whole of the many different kinds of lacquers used are the products of trees found only in the Japanese islands, and in the second place the enormous amount of labor bestowed upon the work in its different stages is such as to preclude imitation in any country where labor is of other than merely nominal value. Mr. Quin tells his readers that he has had great difficulty in obtaining thoroughly reliable information, owing to the ignorance of the artificers and the subdivision of labor. Notwithstanding these difficulties, however, the report is replete with interesting particulars, and as it may be purchased entire for 2d., we would advise all japanners and others engaged in branches of business in which lacquers, varnishes, &c., are used to procure a copy for perusal and reference.

It appears that the various kinds of lacquers are procured by tapping the lacquer tree (*Rhus vernicifera*), which is abundant all over the main island, and is also met with in Kiushiu and Shikoku. Special tools are used for the purpose, and it is said to need a certain "knack" to secure the exuding juice in a pure and proper condition. In its crude state the lacquer is priced at 90 to 100 yen, or, at the present low rate of exchange, equal to between £12 and £13 per tub of about four gallons. If the subsequent processes could be successfully carried out, it might possibly pay to import the raw material into this country. The manufactured article undergoes many transformations, mixtures being prepared and sold in which seaweed-jelly, grated sweet potatoes, soot, charcoal, iron filings boiled in rice vinegar, ground sea-shells, turpentine, whetstone water, camphor, oils, oxide of iron, gold, silver or tin powder, and sundry other ingredients, are incorporated. Mr. Quin mentions a very remarkable property of lacquer. He says: "If crude lacquer, which is originally of the color and consistency of cream, is exposed to the sun for a few days without adding water, it loses its creamy color and becomes quite black, or nearly so, but also becomes thinner and transparent, or rather translucent, as can be seen when it is smeared on a white board. It will not now, however, dry if applied to an article, even if kept a month or more in the damp press. But if water is mixed with the lacquer which has thus been exposed and become black, it at once loses the black color and its transparency, and becomes again of a creamy color, though slightly darker, as if some coffee had been added, than at first. After evaporating this water, it can then be used like any ordinary lacquer, either alone or in mixtures, and will dry in the damp press, during which process it again turns black."

Lacquer will not dry or harden properly in the open air. It must have a damp, closed atmosphere to do so, otherwise it would run and remain sticky. The Japanese use a cave or an underground cellar, where practicable, or, in default, an air-tight case of wood, with rough, unplaned planks inside. These are thoroughly wetted before the lacquered article is put in to dry, the process occupying a period of from six to fifty hours, according to the time of the year and the sort of lacquer used. This appears to be one of the secrets of the Japanese lacquerers, consequently it is of some importance to be aware of the fact. The business is one evidently requiring patience, care and cheap labor, seeing that Mr. Quin enumerates thirty-three different processes in applying the lacquer, with periods of drying or rest between many of them of from twelve to forty hours. The tools, brushers, smoothers, &c., are different for the various sorts of lacquers, as well as for the articles to which they are applied, gold lacquering, flat or raised, appearing to be the highest form of the art. It is probable that many of these tools and processes might be dispensed with were machinery used, but on the whole we are disposed to think that lacquering, as detailed in this pamphlet, must remain a handicraft, and will scarcely be transferred to the Western hemisphere with any notable success. At the same time it must be freely admitted that Mr. Quin has cleared up many disputed points, and has given us far more information on the subject than has ever before been known.

FORMER STATIONERY.

Is it not strange in these days of cheap stationery to think of a time when both parchment and papyrus had become so rare and so exorbitantly expensive that both Greeks and Romans were in the habit of using a palimpsest, which was simply some old manuscript with the former writing erased? Thus countless works of authors now celebrated, and whose every word is held priceless in this nineteenth century, were ruthlessly destroyed by their contemporaries. Verily, those prophets lacked honor! Many were the expedients resorted to by the early scribes for the supply of writing materials. There was no scribbling paper whereon to jot down trivial memoranda or accounts, but the heaps of broken pots and crockery of all sorts, which are so abundant in all Eastern towns, prove the first suggestion for such china tablets and slates as we now use, and bits of smooth stone or tiles were constantly used for this purpose, and remain to this day. Fragments of ancient tiles thus scribbled on (such tiles as that whereon Ezekiel was commanded to portray the city of Jerusalem) have been found in many places. The island of Elephantine, on the Nile, is said to have furnished more than a hundred specimens of these memoranda, which are now in various museums. One of these is a soldier's leave of absence, scribbled on a fragment of an old vase. How little those scribes and accountants foresaw the interest with which learned descendants of the barbarians of the isles would one day treasure their rough notes! Still quainter were the writing materials of the ancient Arabs, who, before the time of Mohammed, used to carve their annals on the shoulder-blades of sheep; these "sheep-bone chronicles" were strung together, and thus preserved. After a while, sheep's bones were replaced by sheep's skin, and the manufacture of parchment was brought to such perfection as to place it among the refinements of art. We hear of vellums that were tinted yellow, others white; others were dyed of a rich purple, and the writing thereon was in golden ink, with gold borders and many-colored decorations. These precious manuscripts were anointed with the oil of cedar to preserve them from moths. We hear of one such in which the name of Mohammed is adorned with garlands of tulips and carnations painted in vivid colors. Still more precious was the silky paper of the Persians, powdered with gold and silver dust, whereon were painted rare illuminations, while the book was perfumed with attar of roses or essence of sandalwood. Of the demand for writing materials one may form some faint notion from the vast manuscript libraries of which records have been preserved, as having been collected by the Caliphs both of the East and West, the former in Bagdad, the latter in Andalusia, where there were 80 great public libraries, besides that vast one at Cordova. We also hear of private libraries, such as that of a physician who declined an invitation from the Sultan of Bokhara because the carriage of his books would have required 400 camels. If all the physicians of Bagdad were equally literary the city could have scarcely contained their books, as we hear that the medical brotherhood numbered 860 licensed practitioners.—*The Gentleman's Magazine.*

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, October 11, 1882.

THE MONEY MARKET.—There has been an easier money market during the past week, the rate for call loans being 6@10 per cent., and discounts 7@10 per cent. The depression in the stock market has at length given place to an incipient boom, there having been quite a general advance, the result, apparently, of an easier money market, and the very large increase in railroad earnings. Railroad bonds have partaken of the buoyancy of the share list, with largely increased dealings. Government bonds are also higher and more active. Foreign exchange is dull at the recent decline, the supply of bills being liberal and the demand light.

THE PAPER MARKET.—In reviewing the general market for the past week, little has transpired worthy of note. Trade with the dealers has only been moderate, and in this respect is disappointing, as there is a marked absence of the activity usually apparent at the first of the month. The feeling, however, seems to be general that a fair trade will be felt during the remainder of the year. The warehouses of the dealers are well supplied with goods, although stocks are not immoderately large. With the exception of straw wrappings and boards, prices are tolerably well maintained, there being no apprehension at present of a weakening. Our remarks contained in a previous issue, describing the depressed condition of the straw-board trade, are now very applicable to the straw wrapping interest also. With large supplies coming on the market, the trade is reaching that point where manufacturers will market their product at any reasonable offer that they can get. Nothing but a very largely increased demand can prevent this state of things.

THE STATIONERY MARKET.—Although there is some report of trade having slackened a little in certain branches of the stationery business, yet, as a general thing, business is very active. The regular fall trade is now well advanced, but there are still large quantities of goods going forward to the principal distributing points. Although there are comparatively few out-of-town buyers visiting the city at present, mail orders are very large, and come in quite freely for all kinds of goods, and there is nothing whatever approaching to stagnation in any branch of the trade. All appear to be very steadily engaged, buyers taking such stock as the demands of their trade require, and said to be disposing of their goods nearly as fast as received. While many lines of goods are sold very closely, and leave only a small margin of profit to the dealer, owing to the sharp competition for business, the aggregate, when the figures are footed up at the end of the year, is likely to make an exceptionally good showing to most houses. Prices hold very steadily.

ENGLISH HAND-MADE PAPERS

ORIGINAL EYNSFORD MILLS, WATER-MARK: "FELLOWS" KENT, ENGLAND.

These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers Lor Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.

HISTORY AND PROGRESS OF THE MIRROR.

We set out with the conviction that the looking-glass is absolutely necessary to human happiness. Of this we have no doubt, and so thoughtfully does nature cater to our needs that Adam and Eve (who, according to the best authority, came into the world fully equipped for bliss) were provided with this most necessary requisite to enjoyment. Some writers would have us believe that the "limpid pool" was the first looking-glass, and, as our geological knowledge is a little weak, we will even admit that, as far as actual manufacture goes, it may have been so, but, for practical use, we know of one older still. Eve, we have no doubt, grew familiar with her own image in the pellucid depths of Adam's eye, and, entranced with what she saw, knew no rest until in the larger mirror of some clear pool she could indorse the revelation of her own beauty, and take a side-long glance at Adam at the same time. Here, then, coeval with creation, we have the looking-glass, and we are forced to admit that, as far as reflecting beauty goes, we have made no great advance in 4,000 years. Is it to be supposed that any mirror to-day would charm Narcissus into love with his own beauty? Or does the fault lie not in the glass but in the gazer? For we are, of course, convinced that no every-day young man in our age would consider himself an Adonis, even with the aid of mirrors innumerable.

If we were to go into the history of mirrors, our task would be a long one, and would still leave unrevealed the human element which alone could give deep interest to the recital, and we will, therefore, content ourselves with a rapid summary of the materials which have played the part of reflectors since mankind awoke to an appreciation of their value. Brass mirrors were in use among Israelitish women, who, it seems to us, have never received the credit they deserved for giving them up to make a washing vessel at the suggestion of Moses! Perhaps, however, they felt the deprivation the less as their drinking vessels frequently had reflectors at the bottom, so that in drinking the image of the person was seen. Bronze mirrors were manufactured by the equal admixture of copper and tin, and set in ornamented frames with handles. Venus was represented by the emblem of a looking-glass with a handle, and silver mirrors were dedicated to her. The surveyors of to-day, when they place their reflectors or mirrors upon the heights, are profiting by the example of Ptolemy Evergetes, who, nearly 300 years before Christ, placed one on the Pharos of Alexandria, which, 1,000 years later, was spoken of as a marvel which astonished the learned by its reflection of distant objects. One of the evidences of Roman extravagance, as cited by Pliny, was the rage for mirrors. Every girl wanted a silver one, and disbelieved the evidence of any of inferior quality. In Peru stones highly polished played the part of mirrors, and so on down to the thirteenth century, we find beauty seeking assurance in a variety of substances, among which glass is scarcely mentioned, although by chance allusions, we learn that it was used for the purpose occasionally, when probably it was the dark colored glass manufactured at Sidon, which answered that purpose. A quaint old writer in the thirteenth century expresses his surprise that glass covered on the back with lead would reflect, and ceased to do so if he scraped off the lead!

The record of patents granted during the last 200 years throws a curious light upon the progress of the manufacture of mirrors. Up to that time the Venetians had a monopoly of the business, but in 1634 the French began to compete, and, competing in the art, beat all others from the field, and improved so rapidly that in another 50 years, in 1584, a glass plate was cast in Paris which was 18 inches long and 50 broad. The supremacy then gained continues to our day. Of three classes of glass supplied to the American market—the French, the German and that of home manufacture—that of France is greatly preferable. The latter is imported pure, to be silvered here upon arrival, while the German is imported ready, and that of home manufacture is comparatively little in demand. American looking-glasses are mostly manufactured at Baltimore; French mirrors are mainly prepared in the suburbs of Paris, while the seat of the German manufactories is in Bavaria. Imported glasses, with rare exceptions, in the case of special orders, are framed in this country, a very large majority in New York city itself. The size of the plates as delivered to the dealers differs a good deal. Those from Germany run from 7x9 inches up to 48x20 and 40x26 inches. French glass from 10x8, all in even inches, up to 160x84. The beveled glass which is so fashionable to-day is prepared after its arrival, being shipped in plain, even sheets. The duty upon it is heavy, being from 33½ to 68 per cent., according to the size, and each importation is subjected to the examination as per standard measurement.

A ROMAN BRONZE EAGLE.

The most remarkable find, however, was that of a bronze eagle, six inches in height, which was found under a mass of charred timber. It had been wrenched from its standard, and its wings, which were vertical, had been torn away. It was found in a small room on the left of the basilica. On careful comparison of the representations of the Roman eagles borne at the head of the legions, it agreed in every particular with them, even to the molding, in which the feathers are depicted. The president of the Zoölogical Society had pointed out to Mr. Joyce, that it resembled the Assyrian pattern, a circumstance which indicated for the cast a very considerable antiquity. The eyes were prominent and pointed upward, and were of exceeding beauty. I believe there was one standard with an eagle to a legion, and as the Roman army consisted of auxiliaries from almost all nations that from time to time had fallen under the Roman arms, the banners must have been singularly diversified. It has been generally stated that the Silchester eagle is unique, but it is not so. In the journal of the British Archæological Association, 1873, occurs a notice by Mr. Grover of the finding of a bronze eagle in Victoria street, city, which had in a similar manner been wrenched from the fulmen grasped by the talons. The feathering was similar, the wings were wanting, and it had been purposely mutilated. —*Archæological Society.*

Dr. J. W. Brühl has discovered a method for removing the dark color from bronze statues, and thus restoring to them the original artistic play of light and shade. First, the statue is washed with a concentrated solution of ammonium carbonate, and then the green film is removed with very weak sulphuric acid. The production of the green film under the black is due to the slow conversion of the copper into the carbonate. This film imparts to the bronzes the color desirable from an artistic point of view, and prevents destruction and blackening. Hence bronzes erected in the days long before the introduction of steam boilers and coal fires have been preserved to our time, the green film originally produced by slow oxidation having protected the bronzes from external action. The black film now so common consists mainly of coal, sand and dust.

A politician once laid on the shelf should never be taken down again.

ARTIFICIAL VEINED MARBLE.

A kind of manufactured marble, specially adapted for indoor use, has become quite popular in England, being produced there at a cost and of a style of beauty calculated to largely supersede the natural material, which latter they really exceed in beauty, particularly in the veins.

In producing this marble, a large sheet of plate glass is first laid horizontally on a table, then a skein of tangled silk, knotted at the opposite ends and soaked in coloring matter, is pulled out into a rough rectangular form, the rectangle being crossed in all directions by the tangled threads, and laid upon the piece of glass, the knots lying beyond the edges of the glass. This first skein is colored to form, say the blue veins, then another skein, soaked in other coloring matter, may be laid over it to form other veins; following this some suitable cement, lightly colored, is sprinkled over the skeins with the fingers to further add to the marbling effect, and after two or three sprinklings, it may be of different colors, the silk is quite covered by the wet layer of cement. The silk is now pulled out by being lifted vertically upward through the cement, more cement is added and the mass smoothed by a towel. At this stage some fine cement is laid on, and over this a layer of canvas, to give strength to the film, now about a sixth of an inch thick, then comes a thick backing of coarse cement, making the whole some five-eights of an inch thick. It is left on the glass twelve hours to dry, enameled and polished.

Lawrence Brothers, of Farringdon street, satisfied that our generosity of criticism extends even to toy books, have drawn our attention to those just issued by McLoughlin Brothers, of New York (for which they are the sole agents here), in two sizes, of which the 4to edition is the larger. There are ten different books in all. Of the Mother Goose series we have seen Curly Locks and Bramble Bush, and can speak of them very favorably, as the drawing is good, the coloring not overdone, and the poetry decidedly of above the average quality. In the smaller series we find the Garden Fence, Minstrel Boy, Becky Longnose, and others. Now, if we take the last-named as a specimen, we can note a very taking cover, in which some rude little boys are sitting cross-legged on a wall, while Becky passes beneath, directly under the laughs and sneers of the onlookers. In this the paper, printing, design and coloring are excellent, and speak well for the remainder of the books of this class. Similarly, if "Johnny Headstrong's Trip to Coney Island" be taken as a sample of the 4to books, Lawrence Brothers have a very profitable agency in hand in this direction.—*Stationer, Printer and Fancy Trades Register, London.*

The improvements in the microscope have been gradual. Singularly each step in improvement has led to changes in the theory of microscopic physiology, and yet it has, in some cases, been found afterward that the same facts could be observed almost or quite as well with the older form and arrangement of lenses. Quite recently the introduction of a system of lenses with short focal distances, 1-16 of an inch and less, has led to the discovery that human saliva is filled with flat, nearly transparent, irregular corpuscles.

Says Victor Hugo: "God created the coquette as soon as he had made the fool."

BINDERS' MUSLIN.

Robert Leighton, in the *Bookseller*, London, gives the following history of what is now called binders' muslin:

In the early days I speak of the white calico was bought in London, sent to the dyers to be dyed, and from thence to John Southgate, of 3 Crown Court, Old Change, to be stiffened and calendered.

I have in my library a volume presented to my father by the author. It is bound in smooth red cloth, with a paper label; the date on the title-page is 1822, and I have every reason to believe it is one of a number similarly bound in that year.

To my father alone we are indebted for the introduction of this material, and the only person who assisted him in the invention was his friend David Smith, of the house of Bowman & May, Manchester Warehousemen, of Wood street, Cheapside.

The invention is much older than you imagine. I cannot give the exact date of its introduction, but in the year 1827 my father's business had so grown in consequence thereof that the family migrated to Hampstead, and the domicile in Exmouth street, Clerkenwell, and several surrounding buildings, were absorbed into the factory.

The embossing of bookbinders' cloth was suggested by my father to the late Mr. De La Rue, and was by him carried out so admirably that his process remains in use unaltered to the present day. The desired pattern was engraved on a gun-metal cylinder, and transferred in reverse upon one made of compressed paper, strung upon an iron spindle, and turned in the lathe to the exact circumference of the gun-metal one, and these two being worked together in a machine, and the pattern transferred from one to the other, the cloth was passed between them and received the impress of the pattern engraved on the metal cylinder. In this way the whole of the cloth used by our firm was for many years embossed upon our own premises. The cylinders were only fourteen or fifteen inches wide, and the machine was turned by manual labor, and heated by red-hot irons, which were placed in the gun-metal cylinder and replaced by others when cold.

In those days it was customary to engrave special cylinders for books of importance, and you may still occasionally meet with stray volumes of the "Penny Cyclopædia," or "Knight's Pictorial England," or "Fisher's Drawing-Room Annual," with embossed cloth covers so prepared.

I have heard several publishers claim to have been the first to use the new material, and doubtless it was taken up simultaneously by several persons, but my father always said that Mr. Pickering was the first man for whom he bound books in cloth, and that either the "Aldine Poets" or the "Diamond Classics" were the first books to which it was applied. I am uncertain which of the two—the latter, I think.

I entered the business in 1836, and bookbinders' cloth was then in general use, and had been so for some years, but there was no manufactory of bookbinders' cloth then in London. We were still buying our white calico and dyeing it, calendering it and embrossing it on our own premises, and other houses had followed our example and had set up similar embossing machinery, and we were at that time selling bookbinders' cloth to the trade.

The first person to undertake the embossing of bookbinders' cloth on cylinders a yard wide was Mr. Law, of Monkwell street.

The first man who really manufactured and sold bookbinders' cloth was Thomas Hughes, of Bunhill Row, and he brought the article to such perfection that we gave up our dyeing and calendering and bought our goods of him in a finished state.

After bookbinders' cloth had been in use more than twenty-five years, James Leonard Wilson established a manufactory at Hoxton, which has since grown to enormous dimensions, and he so improved the manufacture that he distanced all competitors, and at one time he was without a rival either in this country or abroad.

The exact period when gold stamping was first applied to bookbinders' cloth is clearly marked by the publication of Lord Byron's life and works, in seventeen volumes. The volumes were published monthly, and had a sale of about 20,000. They were bound in green cloth, and the first volume was issued in 1832, with a green paper label on the back, matching the cloth in color, on which was printed in bronze the title and a coronet; on the second and succeeding volumes the paper label was dispensed with, and the coronet and title was stamped in gold upon the cloth itself.

The following is a German recipe for coating wood with a substance as hard as stone: 40 parts of chalk, 50 parts of resin and 4 of linseed oil, melted together; to this should be added 1 part of oxide of copper, and afterwards 1 part of sulphuric acid. This last ingredient must be added carefully. The mixture, while hot, is applied with a brush.

A very strong mucilage, having sufficient tenacity to fasten sheets of pasteboard together, and having the additional advantage of being waterproof, can be made by melting together equal parts of pitch and gutta percha. To nine parts of this add three parts of boiled oil and one-fifth part of litharge. Continue the heat with stirring until thorough unison of the ingredients is effected. Apply the mixture hot or somewhat cooled, and thinned with a small quantity of benzole or turpentine oil.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

CUTTING STITCHED BOOKS.

The following is a description of an invention provisionally protected by Robert Söderstrom, of Upsala, Sweden, but which has not been patented, and is therefore open to general adoption. It is designated as a new apparatus for cutting the leaves of stitched books. This apparatus is constructed as follows: Two posts or standards are connected together by a guide and base-plate. On the guide is mounted a movable slide, to which is fixed a cutting instrument, consisting of a round, sharp-edged knife or plate. A cross-bar is adapted to slide up and down in the posts or standards, and to be pressed downward by the action of pressure-screws in the said posts or standards. In using the apparatus the stitched book to be cut is placed on a board between the base-plate and the cross-bar, and is fastened down firmly by means of the pressure-screws. The slide with its knife is then moved to and fro on the guide by hand until the edges of the book are removed, leaving each leaf free. On the guide is placed an adjustable stop, which may be fixed in any required position thereon, according to the length or breadth of the book to be cut, so that the stroke of the knife may correspond thereto. A spring is adapted to press the knife against the book. By this apparatus the leaves of books may be cut in much less time than by cutting each leaf separately.

OVER 14,000 SOLD BEFORE SEPT. 15.

Mrs. DORR'S LAST PRODUCTION,

"Santa Claus Souvenir."

NOT A BOOK BUT A NOVELTY FOR THE HOLIDAYS.
Something New, Rich, Neat and Novel. Each one in White Envelope; 25 in a Box.

THE reputation of the Author is sufficient to guarantee a very large sale, and Mrs. Dorr has received contributions for the Souvenir from well-known writers, among which are Paul H. Hayne, Constantine E. Brooks, E. C. Stedman, J. J. Piatt, R. H. Stoddard, Henry R. Dorr, Mrs. Mary E. Bradley and others. The above cut gives the shape (but not the size) of front cover. Size, 9¼ × 5¼ inches. Both front and back covers are Lithographed in **Nine Bright Colors and Embossed,** so that the cut gives but very faint ideas of the beauty of this salable novelty. The inside 12 pages, printed in two colors, on tinted paper are all cut out the shape of Santa Claus. Price of this Gem only 50 cents. Sample copy mailed any DEALER on receipt of price. We solicit correspondence with dealers who wish to handle the Souvenir in their section. It is not a book, but a novelty that every Stationer, Bookseller, Fancy Goods and News Dealer can sell. We can deliver large quantities in New York City. It will sell in every State in the Union for the beauty of the work, reputation of author and popular price. Liberal Discount to Dealers. Address, **TUTTLE & CO., Publishers, Rutland, Vt.** BAKER, PRATT & CO., New York Agents.

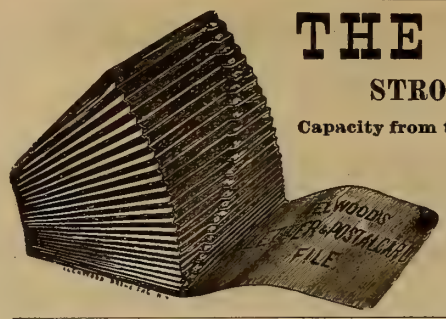
A MAGNETIC CLOCK.

The jewelry store of Oxtoby & Duffield was visited by a number of gentlemen last evening interested in the movements of E. W. Chellis, of Harrisburg. That gentleman informed a few personal friends that he was about to hang a clock that would chronicle seconds, minutes and hours of time without the aid of springs or weights—a clock whose motive power should be supplied from mother earth's inexhaustible laboratory. The clock is about the size of an average eight-day clock, the pendulum weighing forty pounds. The works bear no resemblance to the complicated machinery of the ordinary clock. A pendulum, two magnets, and a bit of wire constitute the whole machinery. There is no "winding up," no "running down," no stopping about the magnetic clock.

Mr. Chellis explained that the inventor found that the electricity contained in the earth could be utilized. The pendulum is made to oscillate beneath a horseshoe magnet, above which is a coil magnet, both charged to saturation. These magnets cause the pendulum to vibrate by repulsion and attraction, this being effected by what electricians call a "cut-off."



"If you are going to keep those magnets charged you will require machinery to generate electricity," said a gentleman.

Mr. Chellis smiled. "If you will come with me, gentlemen, we will erect the 'machinery.'" They followed him down stairs to a spot of earth, and he invited them to dig. A hole about 2½ feet deep was made, and at its bottom Mr. Chellis deposited a thin copper plate. He attached the end of a copper wire and requested the diggers to fill in the earth. When about a foot and a half from the surface a halt was called and a thin zinc plate of the same size, 1½x2½, was laid in. The wire was attached to it also, and the order was again given to "fill in," and when the hole was filled and the earth stamped down, Mr. Chellis thanked his friends for assisting him to "erect the machinery."

"That will be of no use without a battery," said one. Mr. C. explained that the two plates formed a battery, from which enough magnetism could be conducted to the magnets in the clock that would sway the pendulum as long as the clock held together.

"Come and see how it works. The forty-pound pendulum trembled, then it vibrated gently until it reached the limit of the arc for which it had been adjusted, and the magnetic clock was going. It is going still.—*Erie Dispatch.*

An invention by M. Fournier, of Paris, is recorded, and consists in the employment of metallic oxides capable of forming, with glycerine or glyceric acid, a solid compound, insoluble in water, and the application of this compound for the manufacture of primary and secondary batteries. He takes oxide of lead as the best adapted, and mixes it with glycerine, forming a thick paste, sufficiently fluid to be run into molds. In about twenty-four hours the mass becomes solid and insoluble in water. By placing this compound in a bath of diluted sulphuric acid, in connection, by a conducting wire, with metallic zinc, it becomes reduced, as fast as it is attacked by zinc, to metallic lead. This metallic lead being in a complete state of division, is eminently adapted to recombine with oxygen, in order to serve again as a depolarizing agent, or even to become peroxidized. It may, therefore, be employed with advantage in the manufacture of secondary batteries.

A NOVEL "AIR LINE."

Railroad advertising has in these latter days become a fine art, and, following the æsthetic tendency of the time, it has become "Early English"—that is to say, "Early English" as respects grotesqueness and inaccuracy.

The frequency with which the pretensions of some lines have been pressed, and the sometimes extraordinary character of their maps, has led to the publication of the appended form of circular. The original has a broad black band, perfectly straight, drawn on a map, which appears on its reverse side, and purports to represent the "shortest line between Chicago and Omaha." The circular itself explains the idea of the map.

THE CHICAGO AND NORTHWESTERN RAILWAY CO.

GENERAL TICKET AND PASSENGER DEPARTMENTS.

CHICAGO, Ill., September 2, 1882.

To the Ticket Agent:

DEAR SIR—"The Short Line" or "The Shortest Line" looks well—on paper—and is good when used with truth for a background; but it really means nothing, or less than nothing, when it is used only as "An Advertising Dodge," with "intent to deceive." The public looks to you for reliable information in regard to all of the railroad lines you sell tickets over. To help you to facts from which you can collate the information asked for by your patrons, we would state in the most positive manner possible that from the day that the Chicago and Northwestern Railway's rails were laid between Chicago and Council Bluffs to the present moment, it has been and still is the shortest railroad between Chicago and Council Bluffs and Omaha, and that no competing line that is built, that is being built, or that "will be open and ready for business on or about September 1, 1882," is as short as that "old reliable," the Chicago and Northwestern Railway.

If these statements are denied, call for the official "Working Time Tables" of the different roads, and figure it out for yourself, and do not be satisfied with figures made for "advertising purposes." Do not forget that tenths of miles count in measuring short as well as long lines. In the distance between Chicago and Omaha a few miles or a few tenths of miles do not "count" very much in the time used in running trains over that great distance, but the real "Short Line" is entitled to all the merit there is in the Short Line.

"Air Line" outline maps are very readily made, and we would call your attention to the one on the back of this sheet. It was made for "advertising purposes," and is quite as accurate as that style of maps generally is. It shows the shortest possible line that can be drawn "between Chicago and Council Bluffs and Omaha, and with its connections (the Union and Central Pacific Railroads), naturally becomes the shortest route across the continent for California and all Pacific coast business, as well as for Nebraska and Colorado." Please bear this in mind when selling tickets between Chicago and Council Bluffs, and give "The Short Line" that fair share of your patronage that its shortness merits.

"And, finally, as we hope to be benefited by your actions, we will in the customary manner endeavor to reciprocate in a way which will be satisfactory to the gentleman who presides over the ticket stamp.

Respectfully yours, W. D. STENNETT, Gen'l Passenger Agent.
W. A. THRALL, Gen'l Ticket Agent.

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot. Each sheet is water-marked with name and date.**

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., October 17, 1882.

The "President's week," and the excursions to the city, arranged by the managers of the Manufacturers and Mechanics' Institute Exhibition Fair, from all parts of New England, especially from northern New England, has brought to the city crowds of strangers, most of whom have "hit two birds with one stone," buying more or less goods, besides "doing" the Exhibition Fair and seeing the sights generally. Lots of strangers there have been who had never before seen "a real live President."

Stationers report a splendid retail trade during the past fortnight, and the jobbers have more smiling faces, and run up long columns of figures in their sales-books. There is a general feeling that the fall trade has fairly set in. Signs of holiday trade, too, are strong; indeed, some concerns are already doing a respectable holiday trade in certain lines of goods.

The book trade as well as all other goods that are sold in every well-conducted bookstore, promises unusual activity during the next three months. I have talked with publishers on the subject. Most of them are preparing unusually attractive lists, holiday books being numerous. In this respect there will be a fine artistic exhibition of various illustrated features. American publishers, Boston publishers at least, boast that their illustrated books are equal to the best produced anywhere. Anyhow, their fertility of resource is wonderful, and books were never more reasonable in price than they now are, and, considering the quality of work in them, they are cheap.

The drift of trade continues to strongly centre toward Milk street, although several of the "old stands" could not be induced to leave their present locations und er any considerationwhatever. It is an anomaly in the stationers' trade here, that it has gravitated away from the centres of those departments of trade that call for the most stationers' goods. To-day, for instance, there are only three stationers on State street, where there were a dozen or more ten or fifteen years ago. But the largest blank-book and bank house, that of Thomas Groom & Co., still remains in State street. There is now only one large house, that of Chas. K. Darling, north of State street, and Cornhill, once Stationers' Row, is almost deserted, that locality having been the home of the guild in the city.

The retail trade is strongest on School, Bromfield and parts of Washington street, in the vicinity of the leading retail dry-goods houses; and quite a retail trade is being built up off from Washington street, in parts of Franklin, Milk and Devonshire streets.

The practice of some of the large dry-goods stores of selling stationery goods and books, at prices below the prices actually paid by those regularly engaged in the trade, is a rapidly growing nuisance, but "what are you going to do about it?" But these dry-goods dealers say they want to accommodate their customers, who don't want to spend their time and strength in going up and down the streets after "pen, ink and paper." But Boston stationers are not the only ones who find fault with the homogeneous and miscellaneous character of dry-goods stores.

A flying run among the principal dealers shows a good feeling prevalent.

Edward E. Bill, I hear, has taken a position with Winkley, Thorp & Dresser and will travel for the firm.

There is considerable competition in the stylographic pen, the best pen, however, selling the fastest.

Travelers report plenty of money in the interior, and a fair disposition on the part of dealers to trade liberally; stocks are not over ample.

L. Prang & Co. say that they will be perfectly satisfied with the card season. Apropos, Ward & Gay, 184 Devonshire street, are proposing to offer the trade an unusual variety and volume of holiday cards.

R. T. McLellan, of Portland, and T. B. Mosher, of Biddeford, have formed a copartnership in the stationery and blank-book business at 37 Exchange street, Portland, Me.

Wedding cards are in large size, and some very stylish weddings are announced in Boston during the next two months.

Since the Marshfield celebration new pictures of Daniel Webster have appeared in the shop windows.

L.

PHILADELPHIA'S BI-CENTENNIAL.

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA OFFICE OF THE LOCKWOOD PRESS,
150 South Fourth Street,
PHILADELPHIA, October 17, 1882.

Next Sunday will witness the beginning of the religious services commemorative of the Philadelphia Bi-Centennial. On every side the city is making ready for this celebration, which promises to be more brilliant than any festival of the kind yet held in other cities of the United States. Independently of the official programme, of which THE AMERICAN STATIONER in its issue of September 21 gave an outline, the inhabitants of this city have begun to decorate their houses and places of business. Chestnut street, just above Sixth, is to be spanned by one of the finest decorative archways ever erected in this city. The structure is to be tastefully ornamented with a profusion of evergreens and bunting, the flags of all nations, Japanese lanterns, &c. The new post office building has been freed from its surrounding wooden fences and new and wide sidewalks have been laid down. All of this changes considerably this part of the city. On Tuesday morning, the 24th inst., there will be a grand review on the Delaware River of all of the craft here, which will be decorated with flags and made to look their best. Secretary Chandler has ordered the North Atlantic squadron, under Rear-Admiral Cooper, to report here to take part in the review, and Commander Simpson, commander of the League Island Navy Yard, will also order the ships, monitors and men at that post to participate. A ship built to represent the Welcome, and having on board impersonators of William Penn and a little colony of fifty Friends, will appear coming up the river. It will be received with nautical honors and escorted by the squadron to the landing place at Dock-street wharf, the original site of the "Blue Anchor Inn." Here there will be elaborate columns and pyramids of fruits and flowers, anchors, arches, &c. The Friends will be received by twenty-five Indians, and as many more Swedes and Dutchmen in costumes of the time. An escort composed of three thousand members of the Improved Order of Red Men will precede the Penn party to Broad and Spruce streets, where they will be assigned their place in the line of the civic procession.

The first feature of the procession will be the United States departments, comprising officers and men of the regular army and navy, which will be followed by employees of the Postal Department, illustrating the work of the post office; employees of the Mint, with a large column representing bullion, and with machinery for making and stamping from fifty to one hundred thousand medals, which are to be distributed to commemorate the occasion; the pupils of the Indian Training School at Carlisle, in omnibuses, and other features. In the second division will be the employees of the city departments, the surviving members of the old Volunteer Fire Department and the engine, and the members of the present Fire Department, civic and benevolent societies of the city and surrounding counties, including French, Irish, Welsh, German, Scotch, Swiss and other national bodies, with tableaux in line. It is estimated that from twenty to thirty thousand men

will appear in procession on this day. In the evening there will be a magnificent display of fireworks, opening with an illumination by colored lights, followed by representations of Penn's Landing, his treaty and his meeting with Lord Baltimore. There will also be set pieces to illustrate a volcanic eruption of Mount Vesuvius, a railroad train in motion and the Falls of Niagara, in which a cataract of fire, one hundred and fifty feet high will be seen. This last piece, it is said, will be the largest pyrotechnic figure ever exploded.

Wednesday will be devoted to the trades display. It will include the employees of the manufacturers of the State. The Baldwin Locomotive Works will be represented by 2,000 men, with locomotives, each engine to be drawn by thirty horses. The Pennsylvania car shops will have 1,500 men in line. John Wanamaker will send 2,000 employees and several tableau cars. In the evening there will be a series of tableaux exhibited on thirty-seven floats, illustrating historical scenes, impersonations of the most illustrious women of the world. Some will illustrate a Persian epic poem, which is appropriate to the celebration.

Thursday, the 26th, will be devoted to the Music Festival by various singing societies. In the evening there will be a reception to the Knights Templar in the Academy of Music, Industrial Art Hall, Horticultural Hall, and Academy of Fine Arts, under the direction of the Philadelphia commanderies. There will be also a prize regatta of the Schuylkill Navy, bicycle races, &c.

Friday will be reserved for the military display, including the National Guard of Pennsylvania and visiting regiments, among whom will be the Seventh, Twenty-third, and Thirteenth of New York. In the evening the ceremonies will close with a concert in the Academy of Music by 1,500 children of the public schools. Two thousand invitations to the celebration have been sent out to prominent men. President Arthur is expected to attend.

Several thousand visitors are expected from all parts of the country, and it is expected that they will take advantage of their stay in the city to visit the principal business houses and manufacturers with whom they have relations.

The stationery trade has been already advised of the coming of a great number of buyers. J. B. Lippincott & Co., will necessarily be one of the first which houses they will want to "take in." They will also want to inspect Chas. J. Cohen's magnificent assortment of staple and fancy goods. The warerooms of George McDowell & Co. will certainly be an object of particular attention. There will also be an excellent opportunity for the stationers, printers and lithographers who visit our city to see the magnificent establishment of A. M. Collins, Son & Co., the most important house of its class in the United States.

Janentzky & Co., who are located on the route of all of the processions, will have their place open during the fêtes to receive their numerous friends from the interior who will be curious to see the novelties in artists' materials which this firm has imported this year.

Langfeld, Turner & Andrews expect to receive many of their friends from the interior, who will come to review their immense assortment and to complete their orders for the holidays.

Charles Beck, whose large stock deserves the minutest inspection, will also receive a great number of friends.

This will be, for those who have not yet had the opportunity, an excellent time to visit the superb establishment of A. J. Holman & Co., whose family and pulpit bibles and photograph albums have so great a reputation in this country.

Alva Bushnell, president of the committee of the stationery trade for the Bi-Centennial will be at the service of all stationers who may come here during the Festival to give such information as they may need. J. VIENNOT.

BALTIMORE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BALTIMORE, Md., Oct. 17, 1882.

Business with the booksellers, stationers and printers is remarkably good, and the opening of the theatrical season has, as usual, largely increased the coffers of the newspaper offices.

Much interest is felt in printing circles over the bill sent in to the City Council for the printing of the list of registered voters of the city, the Board of Registers themselves complaining that the charges were excessive. The work was done for James Kerns, who obtained the contract, and the bill as presented to the council was as follows:

Mayor and City Council,

To James Kerns, Dr.:

For printing and posting registration lists, summer sitting, 1882, as per contract, dated June 13, 1882:

Actual measurement.		
English lists	5,655,100 ems.	
German lists	5,456,250 ems.	
Total	10,921,350 ems.	
Less allowance for double leading.		
English	1,009,425	
German	1,008,300	
Net total	8,903,625@72½	$6,455.15
Alterations, 73 hours@50		36.50
		$6,491.63
For September sitting		4,000.00
Total		$10,491.63

The council referred the matter to a committee which in turn reported it back to the council as the term was drawing to a close, and sufficient time was not left to go into a full investigation. The principal difficulty has been in the "leading" of the list, and charging for the space occupied, accordingly. Thus the case at present stands.

W. E. C. Harrison has just finished the new building at the back of his store, making his place of business about 36 feet larger than before. "Business," he remarked, "required it."

J. R. Edwards, blank-book manufacturer, has added many new books to his catalogue. His business, as usual, is good.

John B. Piet & Co., publishers of the *Catholic Mirror*, give notice of an extra number of the past week, the occasion being the bi-centenary of St. Teresa.

Dell & Knapp, bookbinkers, have just finished a large edition of binding of an historical book for a Philadelphia house.

John B. Piet, Jr., has just returned from New York. He had been there attending the annual meeting of the Catholic Booksellers' Association. Mr. Piet is a member of the firm of John B. Piet & Co., and is secretary of the association alluded to. The society has been a success from its very inception.

The floats used in our Oriole have gone to Philadelphia to form a part of the Bi-Centennial celebration in that city. If the originators of the celebration only secure the services of Hoen & Co. for the printing of their programmes they will have nothing to be sorry for.

Cushings & Bailey, J. W. Bond & Co., and the Baltimore News Company report a brisk trade in miscellaneous books; Curry, Clay & Co., Griffin, Curley & Co., Guggenheimer & Weil quote printing and stationery in about the same terms.

Mr. Evans, of your city, was in town during the past week with a large line of handsome stationery and Christmas novelties. He did a big business.

W. W. Atkinson, formerly engaged in the retail stationery business in this city, has connected himself with Wm. B. Walker, Southern representative of Daniel Slote & Co., New York. It is gratifying to state that Mr. Atkinson has completely recovered from the debilitating effects of the illness which occasioned his retirement from the retail business. With two such energetic wide-awake young men to watch their interests, Daniel Slote & Co.'s trade in this city and the South should increase very rapidly.

Wm. B. Walker, manufacturers' agent in blank books and stationery, has returned from the South. He reports trade first-class. He starts again to-night for Savannah and New Orleans on a two months' trip. W. P. M.

CINCINNATI GOSSIP.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, October 16, 1882.

In general business, including all descriptions of merchandise, a temporary dullness prevailed as a rule during the past week. It was the first week after the Exposition, at which more than a third of a million of people were visitors, fully a quarter of a million of them from outside the city, and it was only natural that it should appear dull by comparison. But there were exceptions to the rule, and these exceptions embraced about all of the stationery trade. Nearly all manufacturing stationers are behind with their orders and straining their large facilities to keep up.

Last week's STATIONER contained a prodigious list of stationers, from a wide range of country, who had sold out or had been sold out, had closed out or "lit" out, or had gotten out by one or another of the numerous avenues which facilitate that proceeding, but not a single Cincinnati man was in the list. Here they are all apparently flourishing like a green bay tree. In all the shops are indications of thriving and driving industry.

But whence this thrift; this extension of trade; this making of acquaintance with the consuming commercial world in the Northern and Southern hemispheres, in the Eastern and the Western continent? Perhaps this query needs an explanation. Grant it then, and here's the explanation. It is a fact that very many of the Cincinnati stationers have been surprised at recently receiving orders from remote quarters of the earth. I shall name a few of them:

There is the firm of J. R. Mills & Co., which has received orders for its reversible envelopes from Auckland, New Zealand; from Montevideo, Uruguay; from Buenos Ayres and from Genoa, Italy; all within a few days from each other, and, in fact, all within the last fortnight. Every one of these orders came from readers of the AMERICAN STATIONER who first learned of the reversible envelope in that journal and who stated that fact in the letter transmitting the order.

Samuel C. Tatum is manufacturing a new style of copying presses. He too, by the way, has just shipped an order for his regular copying presses to Montevideo, South America, and has just received from the same house an order for one hundred more copying presses. The information as to the quality of his presses was obtained through THE AMERICAN STATIONER.

His trade in the entire region immediately tributary to Cincinnati, is about sole monarch of that realm, and it has been making steady headway in extending its field by conquests East, West, North and South.

Wilstach & Baldwin have been winning Southern trade wonderfully. The late lamented Charles F. Wilstach was early prominent in promoting the great enterprise which developed into a railroad between Cincinnati and Chattanooga, the key to the South, and it is gratifying that the house he did so much to found, should derive benefit from the opening of trade with the South by that great highway. The facilities of this house for manufacturing mercantile stationery and blank books, and for commercial printing throughout the whole range of the business, is wonderful.

John Holland took a special award for a new and valuable discovery for his iridium display at the exposition. It was a gold medal. This special award is one rarely made, and it is a high honor to win it. Regular premium list awards at the Cincinnati expositions are not mere matters of form. They are verdicts of real merit rendered by competent judges. A special award is all the more significant and valuable. Mr. Holland gives very little of his time to his iridium business. The company is a stock company, in which he is a director and a large stockholder. He can be found daily, at all business hours, at his gold-pen factory on Fourth street. He built that up to an immense concern, and his heart is builded into it. Even the splendors of the iridium revelation he himself made cannot entice him away from his old love. The gold-pen business he is improving immensely. In a few days he will usher upon the market a sensation in the shape of a gold pen with plate iridium points, the first of the kind the world has seen, and destined to have a sudden and astonishing popularity. It does away entirely with some of the shortcomings of the gold pen, and makes it, as it were, a steel pen endued with immortal youth. In respect to variety, including the great number of styles of pointed pens, the stub pen and the great mammoth barrel pens, and all these modified into subclasses by differences in shape and dimensions, the products of this factory are positively astonishing. Yet, every month is adding some new style in pen or in holder, or in both. In that matter of holders the multitude of his new designs is the astonishing feature. Mr. Holland's sale of his new pencil, not in the market a year, is positively astounding, and now he has whetted the popular appetite for them by producing a great variety of fine styles of barrels and mounting. His Mackinnon stylographic pen, of which he is the manufacturer, is finding an increasing sale. It would take too much space to even summarize his endless variety of charm pencils and other artistic novelties. I must drop it with a mere mention. Mr. Holland's iridium business runs itself and he runs his pen and pencil business with a vigor and with a success which throw a shadow over the most brilliant years of its past history. His trade extends to China, it covers all New England, and is growing there astonishingly. In the Middle States it is large, and it has made a decisive conquest on the other side of the Atlantic.

The Globe Files Company in this city has made many a happy hit in its products. They are pretty—the products are—and, in fact, are artistic and ornamental, as well as conducive to "law and order" in the office, counting-room, library or drawing room. A popular addition to the Globe Files Company's range of products, already so wide in respect to variety, has recently been made. It is a music file, mounted with bronze, silver and gold, as per order. The demand for this was instantaneous and prodigious. The company has now seven great floors for its workmen, and with the most approved machinery and working appliances is pushing its operatives to the full of its capacity, and yet it is weeks and weeks behind its orders. It might be tedious to mention in detail the extent of territory which its trade has reached. It comprises all the United States, and the wonder is that it is so evenly distributed. It goes all over Canada and has invaded Mexico. Orders are now coming from South America, England, and inquiries are made from the Islands of the Pacific. It is seldom that a new enterprise meets with such brilliant success, and it is not every day the public is offered an article of use that serves its intended purpose so well and at the same time so fully satisfies the taste for the beautiful.

Snider & Hoole have been doing an immense business in their specialties, namely bookbinders', &c., tools, machinery, material and supplies. I have spoken of the admirable, visible, smooth, simple, complete system, which characterizes the business management of the Cincinnati branch of this house. Its business, of course, is growing. Last August it did the largest August business in the entire history of its long and flourishing existence. This house has recently made an acquisition in that it has secured on equitable terms the exclusive Western agency of the celebrated Androscoggin woodpulp boards.

Charles Stewart, as well as Louis Snider's Sons, his near neighbors, persist in keeping the sidewalk in front of their great warerooms on Walnut street built up with breastworks of paper bales. The scene of restlessness about these houses during business hours is a gratifying evidence of business activity in the Cincinnati paper trade.

The Fulton Gravity Scales "no springs, no slides, no weights," weighing objects from ¼ oz. to 10 lbs, are a new enterprise, and an astonishingly successful one. They are used in the Cincinnati post-office, where they couldn't stay a minute if not unfailingly reliable. A great feature in their favor is the rapidity with which they can be used. Then, they are compact and durable.

A. H. Pounsford & Co. are trading more largely than ever in fancy stationery. The windows of Robert Clarke & Co. are also brilliant with this class of goods.

W. B. Carpenter & Co. are driving their business in staple commercial goods. They recently received orders from two points in South America, by virtue of a card in THE STATIONER.

Then the suburbs of Cincinnati, noted for their manufacturing industries, are reaping business thrift according to their sowing. There is Hamilton, a thriving suburb, twenty-five miles north of Cincinnati, where Black & Clawson manufacture their celebrated perforating machines. The compactness and the cheapness and economy of use of these machines is winning them the popularity they deserve. The call for them is increasing, and is destined to increase still more.

There, again, is another suburb of Cincinnati, the driving, thriving city of Middletown, only forty miles north of Cincinnati, a town which Sutphin & Wren have made notable in many ways, but in none more brilliant than by their production of a splendid popular blotting paper. They have calls for this paper from all points of the compass. Their "Paragon" blotting paper has proved an immense success. The recognition it is meeting in the East is more than surprising. Orders keep rushing in from New England, and notably large ones come from Hartford, Conn.

All branches of industry into which paper enters, directly or indirectly as a material or a product, are thrifty in Cincinnati to-day. The general, I might say universal tendency is to an extension of business. There are no apparent exceptions to this rule, at present, in this class of industries.

The following named trade visitors have been here within the past few days: H. Appleton, of New York; Mr. Freeman, of American Pencil Company; Mr. Todd, of Mabie, Todd & Co, New York; W. L. Marks, of Dixon Pencil Company, N. J.; A. J. Atkins, of Livermore's Pens, Chicago; James Wallace, of Southworth Company, Mittineaque, Mass.; J. S. Shaw, of Nagle & Co., Philadelphia; T. G. Knight, of Carter, Rice & Co., Boston; Mr. Chamberlin, of Z. Crane & Brother; N. Frank, of Charles Zinn & Co., New York; Mr. Gumpert, of M. S. Kahn, New York; W. S. Solomons, of Berlin & Jones, New York.

PRINCE WILLIAM.

HOME DECORATION.

BY EDWARD DEWSON.

In considering the finish of wall surfaces and ceilings, we will suppose that our wall woodwork is walnut, as is generally the case in our ready-made house when hard-wood finish is used down-stairs. We will arrange a scheme for color decoration in keeping with the sombre tone of the wood, and will try to make our effect brighter by harmonious contrast, rather than by the simple blending of tones.

The dado or lower wall decoration is desirable and appropriate here. When the wall is large enough to admit of such a treatment to panel up the wood, from four to six feet high, as did our ancestors in the good old colonial days, is very rich and suitable; but, in a wall not more than eight feet wide, such a dado would not be admissible. Of late the painted and paper dado has been a much abused feature of modern house decoration, and is used everywhere "without rhyme or reason." Yet there is a use and place for the dado, as it gives a certain character and stateliness to a wall, that could not be obtained by any other mode of treatment, especially in such rooms as dining-room and library, and sometimes the sitting-room, as well as the halls. It gives also a good starting-point for a scheme of color treatment, and, if selected with judgment, may be a good background for furniture. Generally, the paper dado, so much in vogue, if left to the unskilled taste of the contractor or paper-hanger (I am speaking of the majority of such, who work by the old-established customs and rules, without giving the matter intelligent thought), is insufficient and narrow, giving to the room a short, top-heavy and badly proportioned appearance. A good general rule to follow is to place the dado molding on a line with the shelf of the mantel, when there is one, thus securing a uniformity of finish all around the room, and bringing it on an average about four feet from the floor. By giving it sufficient height we can break it up into bands of color, and in this way give a pleasing variety to our wall.

In our hall we may safely go a step beyond this, and place the dado rail from five to six feet high, for here we wish to express breadth and character of treatment.

This wall may be ten and a half feet high. We will begin by laying off six feet up from floor, for our dado; of the remaining four and a half feet, eight inches next the ceiling is filled by the conventional plaster cornice; the re-

maining space we will call the field, taking the place, in this instance, of the top border or frieze. The field of our wall we will fill in with a soft golden brown, or old-gold tone, not too dark, but tending more toward the yellow. This is to contrast with the sombre tones of the woodwork, and to brighten up and lighten things as much as possible. On the wall below the cornice and also above the dado, carry a little group of three or four quarter-inch lines of blue. This must not be a clear, but what is termed a "cut" color—ultramarine blue toned down with a very little raw umber. The effect of these small masses of clean-cut lines on the gold ground will be very rich. If paper is used it should be of two tones; a darker pattern over a light ground, and not too marked in character. I would advise, however, the use of distemper or water color, in one clear unbroken tone, filling the field from dado to cornice; this is cheap and durable enough, when, as in this case, it comes above the reach of everyday use and wear. A rich old gold or golden brown, may be made from Oxford ochre and medium chrome yellow, and a still deeper tone by using orange chrome in place of the medium. It is not practicable here to give an exact formula for mixing, but suffice it that a preponderance of ochre will tend it toward the brown, while the chrome gives the yellowish cast. The judgment and taste of the reader who is interested in experimenting must come into play to keep the balance of color toward the one or the other, as the case may seem to demand. Should paper be required, however, such a one as I speak of can be bought now at any wall-paper warerooms, at prices varying from thirty to seventy-five cents per roll, and from that the prices run up to very high figures; but as we are seeking now for the best results with the least necessary expenditure, while we can get such colors as we need in the cheaper goods, we will let the better qualities alone.

The increased demand for good colors and tones in the cheaper goods has encouraged manufacturers both at home and abroad, to bring out papers of this class in nearly as good tones as the more costly article; and where a few years ago we had but little selection, we now have a large and constantly increasing stock to choose from. I have found that the American papers of the cheaper grades are, on the average, much better in tone and color than the same quality of foreign goods, while in the latter grades, the latter manufacturers take the lead.

As a balance for our warm colors on the walls, the ceiling should have a cool greenish-gray tone—not too sharp on the green—and also avoiding a purplish tendency, as this will give it a heavy, muddy appearance, and clash sadly with the other colors. A three-inch style of a very soft, low-toned, yellowish-olive, should border the ceiling next the wall, and a short space inside this, a few nicely arranged lines of bluish olive crossing each other at the corners. These lines should be about one quarter inch in thickness and half an inch apart. Five such lines make a good group. Inside of this, at a distance of about two inches, run another single one-quarter inch line of tan colored red, made from burnt sienna and stone yellow. This will give a simple and pretty finish to the ceiling. The cornice should be treated with special care, as the whole effect may be marred by careless or injudicious treatment.

The effort should be to marry or reconcile the warm colors of the wall with the cooler tones of the ceiling. To accomplish this, the cornice must be treated in soft, low tones, blending the cooler with the warmer colors in such a manner as to harmonize the whole, avoiding particularly any one strong noticeable color on the larger members that would attract the eye, such as red, dark blue or heavy olive. The colors should invariably be soft in tone, excepting, perhaps, the lowest member, and as this acts as a dividing line between cornice and field, it may be stronger and darker. I recall an incident in my experience of a positive, but well-meaning builder, for whom I once superintended the interior decoration of some houses, insisting loudly on the introduction into the principal member of a cornice what he termed "tomatis color." Experience has taught me that it is wiser to give such men their rope, and let them bring themselves to a stand at the end of it, and in this case, the presence of such a color at the top of a room finished in the softest of tints, spoke loudly for itself; in fact, to use a painter's term, "it swore." No louder, however, than did my good friend the builder, when he saw the unfortunate result of his effort to add brilliancy by introducing strong color; and ever after that he avoided any appearance of interfering or dictating, but I have a feeling that he never quite understands to this day the why and wherefore of it.

Bear in mind that what we are arriving at is to carry the eye by easy stages from the darker and warmer shades and tones of the wall into the cooler tones of the ceiling, blending them harmoniously by means of the cornice, with its quiet and mixed treatment of soft color. And if we stop the eye with a sudden jar, or some bright or strongly contrasting color, the whole effect is spoiled; for in no case can we introduce with good taste any large amount of crude color into such a scheme without unfortunate and trying results.

In our dado we have a space of six feet to fill, which I propose to do in the following manner: Measure up four feet from the floor, and at point place a 1¾-inch walnut molding. This divides our dado two-thirds of its distance up, into what we call a sub-dado. Fill this with a dark paper two or three shades of olive, red, antique blue and gold, on a dark brown or black ground, costing from 50 cents to 75 cents per roll. Directly under this molding, and also above the base board, run a three-fourth inch strip of black or a very dark olive paper. This finishes a sub-dado. Above this we have have a two-foot space, which cap with quite a heavy dado molding, also of walnut, the lower member of which should be painted black or ebonized. This molding may be about 2¾ inches thick. Between this and the smaller molding below run a band of 18-inch wall paper, of a pretty and soft tone, taking care in the selection to harmonize with the surrounding colors. Fill in the space above and below this with plain paper, same color as the field, and it may be a shade darker, with good effect. Separate this from the 18-inch paper by one-fourth inch black moldings at top and bottom.

[To be Continued.]

NEW ARTIFICIAL WOOD.

A German inventor has recently patented a new method for obtaining objects of irregular forms from an artificial woody mass, which consists of cellulose, starch meal and sawdust. He makes this material as follows: Ordinary commercial cellulose, reduced to pulp in water, is placed over a fine sieve, to deprive it of the water, after which three parts' weight of starch, two parts of meal (either wheat or corn) are added, and the whole thoroughly mixed. This mixture is boiled for one hour in a water-bath, which converts the mass into a kind of glue, which is then mixed with an equal quantity of sawdust. The mass is rolled into plates and left to dry in a hot room. When dry it is ready for use. These sheets are pressed into any desired form by the use of iron or steel molds, heated to about 120° Centigrade, and under a pressure of about 700 kilogs. per square centimetre. Under that degree of heat the mass becomes viscid, and fills every part of the mold. The pressed object is taken out of the mold, and after cooling, resembles wood, hard and elastic, becoming bone hard after a time. It can be treated like wood, worked with a chisel, sawed or filed, and be colored, polished or glued. It can also be veneered. In order to prevent objects made of this woody mass from expanding or drawing, the mass may be rendered more elastic by adding pipe-clay to the manufacture. Coloring matter may also be added to the mass. A very good, but, of course, inferior article may be made by increasing the percentage of sawdust.

PAPERED VENEERS.

Papered veneers have come to be an important article of manufacture, the extension of the industry being largely due to the new and wonderful process of cutting. The mechanism cuts the logs to lengths of twelve feet, which are then halved or quartered, and bolted securely on a revolving iron table. As the table and wood revolve, the surface of the latter comes in contact with a knife twelve feet long, ground to a razor edge and perfectly true, secured on a rigid iron frame—the entire cutting apparatus weighing about thirty tons. The veneers roll off in sheets, at every revolution, of from one-ninetieth to one one-hundred-and-seventy-fifth of an inch in thickness, and of the width and length of the log. There is not the slightest vibration of either the knife or the log, as the sheet of wood in such case would be either broken or take up the spring like a wedge. The sheets are backed with paper.

EVANS & GARDNER, 43 Elm St., New York,

Manufacturers of Rubber and Metal Stationery Specialties.

SOLE AGENTS FOR EXCELSIOR PENCIL SHARPENERS.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President. **DALTON, MASS., U. S. A.** JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show.

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS

LINEN LEDGER PAPER

Will stand the severes test of COLOR, CLIMATE, INK OR WEAR.

CARSON & BROWN CO., Manufacturers.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U.S.A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

REGULAR QUALITY.

In handsome Light Blue Boxes containing one-quarter of a ream of Note Paper each, and bearing in blue letters description of contents.

In separate Boxes of uniform size, are one-eighth of a thousand Envelopes corresponding in tint and quality to the paper.

EXTRA QUALITY.

In attractive Lavender Colored Boxes containing one-quarter ream of Extra Fine Paper each, with contents printed in red. Corresponding to this, in like Boxes, are Envelopes to match.

All this Stationery may be relied on to be according to representation It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., *79 Beekman Street.*

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

THE previous success of our Cards, it is confidently expected, will be fully sustained, if not increased this season, an expectation which is already verified by the large advance orders received, justifying our increased efforts to bring out a line superior to all our previous productions. Our line will again comprise Double and Fringed Cards as well as Heavy Mounts. All the Fringed Cards will be provided with protectors, and envelopes will be furnished for all cards costing $1.80 and upward. The names of the artists who have contributed designs are a guarantee of the excellence of our Cards. We will name only the following :

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,

MISS F. BRIDGES,
MISS ROSINA EMMET,
THOMAS MORAN,
ALEXANDER SANDIER,
R. G. BIRCH,
GEO. J. BARNES,

MISS DORA WHEELER,
MISS FLORENCE TABER,
FREDERICK DIELMAN,
HARRY BEARD,
F. SCHUYLER MATHEWS,
H. P. KENDALL.

The literary matter in connection with our designs has been carefully attended to, among others, by MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

PRANG'S PRIZE CHRISTMAS CARDS.

THIRD COMPETITION

FIRST.—Artists' and Popular Prize Card ($2,000), by Miss Dora Wheeler,
SECOND.—Artists' Prize Card ($500), by Miss L. B. Humphrey,
SECOND.—Popular Prize Card ($500), by Walter Satterlee,
THIRD.—Artists' Prize Card ($300), by Miss L. B. Humphrey,
THIRD.—Popular Prize Card ($300), by Frederick Dielman,
FOURTH.—Artists' Prize Card ($200), by Alfred Fredericks,
FOURTH.—Popular Prize Card ($200), by Miss Florence Taber.

NEW YEAR CALLING CARDS.

SILVER MEDAL, NEW ENGLAND FAIR, 1881.

SILVER MEDAL from FRANKLIN INSTITUTE, of PHILADELPHIA.

GOLD MEDAL at ADELAIDE, AUSTRALIA, 1881.

SILVER MEDAL, Awarded in 1870 by the CINCINNATI INDUSTRIAL EXHIBITION.

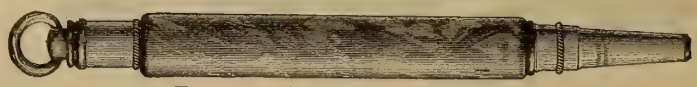
GOLD MEDAL, CHRISTCHURCH, NEW ZEALAND, 1882.

HIGHEST PREMIUM over all others from AMERICAN INSTITUTE, NEW YORK, in 1870–74, and MEDAL OF PROGRESS, 1877.

MEDAL OF IMPROVEMENT AND PROGRESS in the ART OF PAPER MAKING, Awarded by BOSTON CHARITABLE MECHANICS' ASSOCIATION, 1878.

AND MANY OTHERS.

Trade Novelties.



[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW POCKET PENCIL.

Herewith are given illustrations of a new pocket pencil known as the A. T. Cross Business Pencil, and made by the Cross Pen Company. This is one of the best things of the kind that has yet been offered to the trade, and is a very taking novelty. It is both "propelling" and "repelling," and embodies the new and prominent feature of automatically expelling the unused remnant or stub of lead from the lead carrier. A new lead can be at once inserted in the empty carrier without removing the point of the pencil or adjusting any of the parts. The mountings are of superior gold stock plate, and will keep bright and do service for years. The best quality of vulcanized hard rubber is used in the better grades. The Dixon Company's leads are used in this pencil, and are furnished in suitable packages. The pencil is made in nine numbers in black and mottled styles.

Extension Rubber Pencil—Open.

Extension Rubber Pencil—Closed.

SANTA CLAUS SOUVENIR.

This is the title of a holiday novelty published by Tuttle & Co., Rutland, Vt. It is a collection of contributions in verse by several well-known writers, as Paul H. Hayne, Constantina E. Brooks, E. C. Stedman, Mary E. Bradley, and others, with selections from J. G. Holland, Whittier, Tennyson, George Macdonald, and a number of sources. The souvenir is not a book—so-called. It is a figure of Santa Claus, cut in the form shown in the illustration. The cover is handsomely lithographed in nine colors, and is embossed to give a *vraisemblance* of the saint. The interior is, as already indicated, filled as it ought to be—with good things. The inside twelve pages are printed in two colors, on tinted paper, their shape conforming to the outlines of the cover. Julia C. R. Dorr is the editor.

STYLOGRAPHIC SHADING PEN.

The "Hawthorne," or Stylographic Shading Pen, is one of the latest outcomes from the factory of the Cross Pen Company. This is, as its name indicates, a combination of the stylographic principle with the ordinary writing pen. It is a fountain pen similar in appearance to and operated like a stylographic; but having a shading pen point, it does not change the individuality of the handwriting of the person using it, and therefore overcomes the chief objection made to the stylographic for commercial uses. Either a gold or steel pen may be used, and removed or inserted at pleasure. The flow of ink can be graduated to suit the demands of the writer. The extreme simplicity and ease of operation of this pen are said to make it as near perfection as anything of the kind can be obtained. It is certainly an advance in its line. It is made in four numbers.

Stylographic Shading Pen.

NEW PATENTS.

No. 265,233. Printing Machine.—Edwyn Anthony and Jacob E. Harvey, New York, N. Y.

The combination of two printing cylinders inclined at an angle to one another, the forms on each of them not occupying the whole surface, with impression and carrier cylinders and devices for deflecting the path of the webs, whereby a plurality of webs of paper may be simultaneously printed on both sides from type, stereotype, or a mixture of both.

No. 265,245. Registering-Stamp.—Hiram Codd, London, England. Patented in England March 16, 1881, No. 1,153, and in France September 16, 1881, No. 144,866.

The combination of a casing provided with an overhanging arm, a series of stamps guided so as to be capable of independent reciprocation in the arm, a register common to all the stamps, and the intermediate operating connections between the stamps and register.

Santa Claus Souvenir.

No. 265,247. Writing-Tablet.—Charles M. Cott, Columbus, Ohio.

No. 265,298. Printing-Machine.—Edwyn Anthony, County of Hereford, and William W. Taylor, Ripon, County of York, England, assignors to R. Hoe & Co., New York, N. Y. Patented in England August 31, 1875, No. 3,056.

The combination, with mechanism for advancing a plurality of webs, of a plurality of turners arranged obliquely across the path of the webs, and having their turning-edges in such co-relation that, each of the several webs being led over a turner, the whole will be associated in the space of one web.

No. 265,341. Mechanical Toy.—Reuben H. Ricker, Boston, Mass., assignor of one-half to George G. Frost, same place.

No. 265,355. Spinning-Top.—William C. Wood, New York, N. Y.

No. 265,392. Toy Vehicle.—George S. Crosby, Bridgeport, Conn., assignor of one-half to James Watson, same place.

No. 265,420. Post-Office Box Label.—Breckenridge Irwin, Decatur, Ill.

No. 265,444. Production of Relief Stipple Paper.—Charles Ross, Burlington, N. J.

The mode of producing a matrix for molding a drawing surface having stipple in relief, consisting in first preparing a uniform stippled impression, then transferring it to stone prepared not to take the transfer, then counter-etching the stone and inking it, then washing off the ink and etching the stone to the desired depth.

No. 265,463. Book-Sewing Machine.—Jesse F. Tapley and George B. Kilbon, Springfield, Mass.

No. 265,467. File-Box.—Geo. W. Tincher, Topeka, Kan.

No. 265,476. Pencil-Clasp. John M. Whitson, Chicago, Ill., assignor to John R. Walsh, same place.

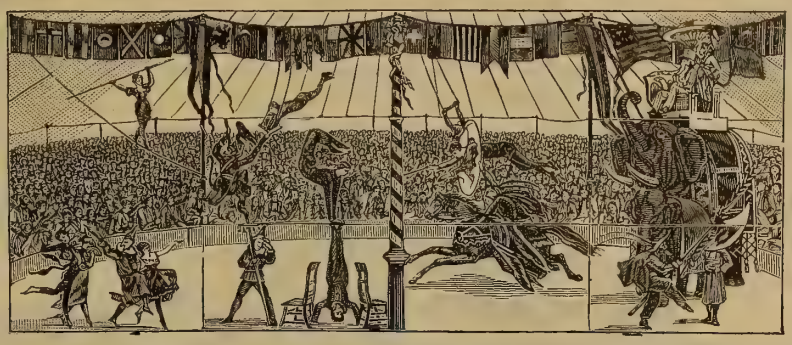
No. 265,487. Return-Ball.—Charles Cureton, Chicago, Ill.

No. 265,546. Sheet-Delivery Apparatus for Printing Machines.—Walter Scott, Plainfield, N. J.

NEW COLORS.

The new colors show many faded tapestry shades, and it is the caprice of the season to label these new shades old; thus there is a vieux Sèvres, or pale old Sèvres blue; vieux rose, which is faded pink; vieux vert, or green with more yellow in it than that lately used. Ficelle shades are seen in variety, and there are natural colors of furs that incline toward ficelle hues, such as the sable and castor beaver. These ficelle and other light-gray brown shades are seen in contrast with every color, and are particularly stylish with rifle green and with mordoré, or golden brown. *Télégraphe* blue, similar to our cadet blue, is named after the blue telegraph paper used in France, and is also better named electric blue. *Chaudron*, or copper red, is the most elegant red shade, but there are also *grenat*, Sultan, poppy and wine colors. Sfax is a new light terra-cotta color; there are many other tints shown of this brownish-red. Besides the electric blue, there are also the hussar, chasseur, sapphire, and midshipman blue shades that are almost black. Réséda, the green of mignonette, is again revived, as is ardoise, argent, acier, and all steel and silvery grays. Pale pink shades are shown in the *crevette*, or shrimp color, salmon, apricot, and cactus hues, with much shading toward yellow.

Alicante is a golden brown, and there are light sandal browns, with darker *feuille morte*, or dead-leaf brown, loutre or felt brown, mordoré and bronze doré, which has a greenish cast.



—:o:—

A device for securing pocket-books, &c., in the pockets of the owners consists of a snap hook attached to the pocket-book or other article to be secured, and to the inside of the pocket, at the bottom, a wire or loop is fastened, to which the snap hook is hooked.

A new adjustable map supporter consists of two clamps connected at one end by a crossbar, having a hand screw for attaching it to a chair or other support, and having eyes at the other end to receive a hollow cylinder that is provided with map-suspending rods and a locking device for holding the rods in any desired position.

SOME NEW TOYS.

Each holiday season brings forth something new for the children, and it is matter of remark that most of the novelties in this line are of American origin, and certainly the home manufacturers are first in the rank of those who provide amusements for the little ones. As usual, Milton Bradley & Co. are to the fore with new attractions, and their list comprises several besides those of which illustrations are given. At the same time, the designs of past years are not forgotten, but reappear with added strength and brilliancy. The new Windmill and Lighthouse—an interchangeable toy—is one of the most fascinating in the whole collection. When set up it stands about three feet high, and is an attraction for older minds than those for which it is designed. As a combination toy it serves for the formation of two distinct structures—the one a windmill and the other a lighthouse. It is of wood, the side sticks being grooved in channels for the reception of the side pieces of the tower, which are painted on both sides, one representing a shingled and the other a masonry construction. In operating the windmill, a weight which is concealed within the tower, causes the shaft at the top to rotate, carrying the arms with the sails around, as if actuated by the wind. The same mechanism hoists or lowers a bag of flour depending by a cord at the opposite end of the shaft exterior to the tower. Placed in the open air, the sails will be acted upon naturally by the wind.

The lighthouse form of this toy is a pleasing change. It is provided with signal flags, whereby the method of signaling to ships can be learned. The toy packs very compactly in a box, which is ornamented with a handsomely colored lithograph. The boy who is fortunate enough to own this toy, will find himself envied by his companions.

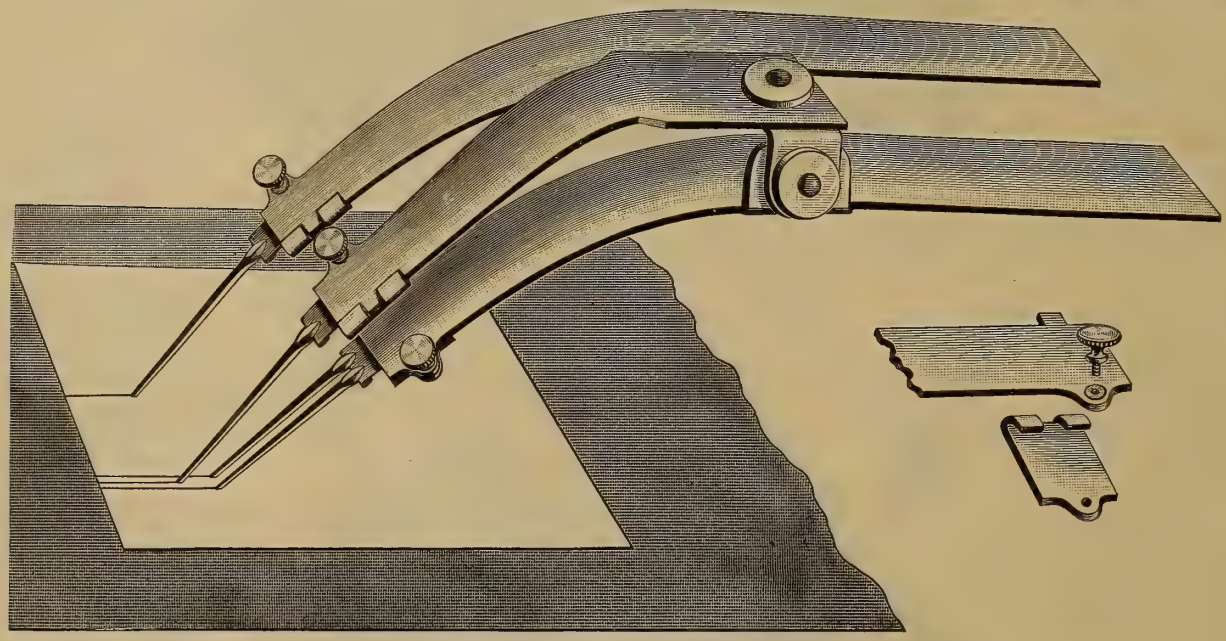
The Interchangeable Combination Circus is another new idea which is sure to take. It consists of thirty five pieces, so designed that they are largely interchangeable. Barnum's "Greatest Show on Earth" is here equaled in miniature, and it would cost the famed showman a large sum to keep up constantly so large a combination. It seems to bear out the claim that it is the finest picture-toy ever published.

Among the new productions not here illustrated, is the Inclined Automatic Railway, which consists of a full complement of trestles, railway tracks, passenger and freight cars, &c. The arrangement is such that the railway when complete is inclined and the cars run up and down on opposite tracks by gravity. In the passenger cars a concealed weight in the roof of one car, gives the tractive force which sends it down the incline, thereby drawing the other car up. By changing the roofs the movement is repeated. The freight-cars can be operated by loading them. A sectional railroad puzzle is another pleasing picture-toy, which when fully displayed forms a train eight feet long. It comprises an engine and tender, mail, express, baggage, smoking, parlor, sleeping and dining cars, with supplementary pieces. A variety of amusing changes can be made with this.

A new game is that of "Costumes and Fashions." This is a social game consisting of seventy-two cards, beautifully lithographed and illustrating the costumes of all ages and countries. The Phrenological Character game and a new and popular edition of the Game of Authors are other interesting as well as amusing contributions to the list.

The reproaches of enemies should quicken us to duty, and not keep us from it.

SAFETY FASTENING FOR ENVELOPES.



A Frenchman, Jules Fleury, of Colombe, has devised a new safety fastening for envelopes. The envelope is formed somewhat in the usual manner with four flaps, each of which is furnished with a row of small holes, which come together so as to correspond exactly with one another when the envelope is closed. Three of the flaps are also each furnished with a larger hole. These three holes also come exactly over one another when the envelope is closed. The flap, which has no large hole, is folded down first, so as to be the lowest (regarded from the back of the envelope), and the three others fold down on to it. After three of the flaps have been laid over one another as described and have been gummed together, a cord or thread is passed in and out through the small holes in the three folded flaps of the envelope, the ends of the thread or cord being left free, and in that form the envelopes are sold. In order to close and secure the envelope completely, the fourth or outermost flap is folded down in the usual manner and gummed fast, the ends of the thread or cord are then drawn through the holes in the fourth flap, so as to come out of the envelope just above the usual sealing place. The ends of the thread or cord are then tied together, and a small leaden seal, with the initials of the sender, is applied over the knot; the extreme ends of the cord are finally sealed to the point where the larger holes come together, the middle portion of the seal passing through the larger holes and adhering to the lowest or first folded flap of the envelope, so that any subsequent invisible loosening with hot metallic wires or similar unlawful instruments becomes impossible. If preferred, the leaden seal may be replaced with an ordinary seal or other means of securing the ends of the thread or cord.

—:o:—

IMPORTANT INVENTION FOR LITHOGRAPHERS.—C. N. Morris, Cincinnati, has devised a new combination machine. The device will first grind off the old work or etching from a lithographic stone, and by the simplest change and in an almost incredible short space of time will produce either a fine or coarse grain for crayon work, chromos, &c., to suit the style of work to be done, and this grained surface can be made deeper and sharper than is possible to be done by hand. Should a fine smooth polish be required instead of a grained surface, Mr. Morris uses simply a little flow of water as a substitute for the more tedious method of rubbing with bluestone or a piece of pumice.

IMPROVED RULING-PEN EXTENSIONS.

John McAdam's Sons have invented and are now introducing patent double and single extension ruling-pen holders, which are illustrated herewith. The engraving is almost self-explanatory, and any practical man will at once see that the appliance has very great advantages, affording a ready means of making the many nice adjustments necessary for complicated ruling with certainty, and without the loss of time which in some other systems has been found to be so annoying and uneconomical. It will be noticed that the pens are held firmly in a simple yet wonderfully effective clamp, which is shown in detail separately, From this it will be immediately apparent that the work of setting a pen can be accomplished in a moment, and also that there can be no danger of the pen becoming loose. The extension pen can be adjusted both vertically and horizontally by means of the two joints shown above the bends in the extensions. An ingenious yet simple and perfectly effective device has been adopted to prevent any slipping in the joints after the pen is set as desired. This consists of a small vellum washer, which is placed under the brass washer and performs its functions perfectly. The whole arrangement is very durable, and is made much more solidly than is usually the case, the brass being considerably thicker than that used by other makers. The temper of the brass is also arranged so that where bending is necessary this can be done without fear of making the action of the pens uncertain. On the whole, the collective advantages shown in this apparatus leave nothing to be desired. The various productions of the Messrs. McAdam, comprising all machinery used by blank-book manufacturers, can be inspected at their works, 528 Kent avenue, Brooklyn, N. Y.

Improved Ruling-Pen Extensions.

William E. Smith, of Berwick, Pa., has devised an ink well for school desks that is adapted to be hermetically closed when not in use to avoid the waste of ink. The ink well is placed in a hole in the top of the desk, and is provided with a pivoted cover having a yielding packing, and the cover is held to the top of the well when it is closed by a pivoted curved arm attached to the frame of the well and engaging an inclined surface on the top of the cover.

ETCHING ON POTTERY OR PORCELAIN.

The application of the copper process, by needle and acid, to china or earthenware has been attempted with great success by the Mintons in England. In the Paris Exposition of 1878 some beautiful examples of this mode of decoration were shown. These plates were etched, and the lines of the etching were filled in, some with gold, and others with color. We see no reason why amateurs should not try their hands at this simple and effective mode of ceramic decoration. The treatment, of course, should be bold. A writer in the *Journal of Decorative Art*, from which we condense the following directions claims to have succeeded in etching copies of Raphael's "Virgin and Child" and "St. John" in almost fac-simile of the lines of the engraving, but adds, we are glad to notice: "We do not recommend this sort of work, it being too fine and too elaborate for the purpose. We would advise the student to practise with good bold outlines, and just a sufficient amount of lines to give the necessary detail with clearness and decision, although if the body of the china is sufficiently hard, very fine cross-etching may be executed if necessary."

The following caution concerning the selection of suitable ware for etching upon should not be disregarded: "We have found that the common white glazed tile is not, as a rule, of the same body or consistency throughout, but that there are parts in it which are unbaked, or soft and powdery, somewhat similar to the small balls of flour we sometimes find in imperfectly baked bread. These unbaked parts will when the acid has eaten through the glaze, be eaten into holes before the other parts of the lines are bitten deep enough, and thus the labor will be in vain. So it will be necessary to be careful in choosing the tiles, &c., before putting the labor on them. Some makers turn out better worked or kneaded clay than others. The glazings of earthenware differ in their composition, some having a soft and others a hard glaze. The soft glazes are more quickly operated upon by the acid, and may be hardened afterward by firing a second time."

Tinted glazes may also be used, and thus varied and beautiful effects may be produced. A semi-transparent colored glaze spread upon a white body, either on the whole or part of the tile, or other article, may be so worked that the background is eaten away, leaving the figure or ornament of different colors, and the backgrounds may then be left the dead white produced by the acid, or may be colored. It will be seen that with the sharp, clear, etched lines filled in a suitable color on the pure white, or tinted glaze, in contrast with the semi-rough dead-colored background, very artistic effects may be obtained.

In etching upon china or earthenware by means of powerful acids, great care is requisite in mixing and laying on of the grounds, so as to enable them to resist effectually the action of the acid. There are several mixtures used for making etching grounds, and in this, as in everything else, each artist has some specialty which he thinks better than any other. It may be borne in mind that the process about to be described can also be used for etching on glass.

The essential qualities of a good ground are: First, a complete and perfect resistance to the action of the acid. Second, a perfectly smooth and level surface, totally free from grit, dust, or other foreign substance. This is essential, for if there be specks of dirt or grit mixed with the ground, the acid will quickly eat or destroy them, and then it eats away the china, making holes in places where they are not wanted, thus spoiling the work. Third, a good etching ground should be firm, so as to allow the tracings to be made upon it, yet not brittle, but sufficiently soft to be easily removed by a scraper or needle point. Fourth, the ground should be easily removed and reapplied. An effective ground may be made of Brunswick black and white wax in the proportion of five parts of wax to two of Brunswick black.—*Art Amateur.*

A new combined book-marker and paper-cutter is formed of a straight elastic blade for cutting the leaves of a book, and also with a tongue connected to the blade at one end. The tongue is curved toward and then from the plane of the blade, so that it may readily pass into books, while the blade acts as a spring to grip the back of the book to hold the marker in place.

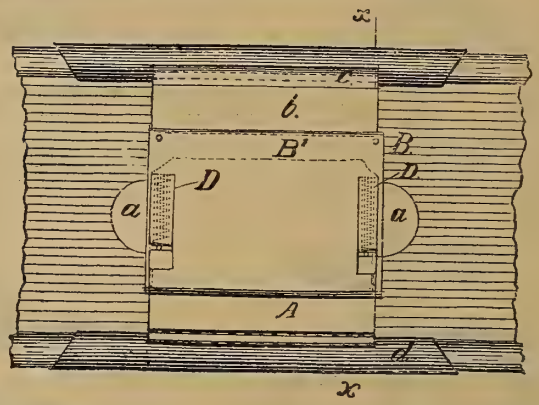
KOCH, SONS & CO.'S

PATENT

EXTENSION ALBUM CLASPS.

Letters Patent No. 164,646, dated June 22, 1875.

Application filed September 28, 1874.



NEWTON HARLAN.

CLAIM.

1. In a book-locking clasp, the combination of the extensible stem D with its screw-threaded receiving sleeve A, whereby the fastening-stem is inclosed, braced and made adjustable within said receiving-sleeve to suit books of different thicknesses, constructed and arranged substantially as described, for the purpose specified.

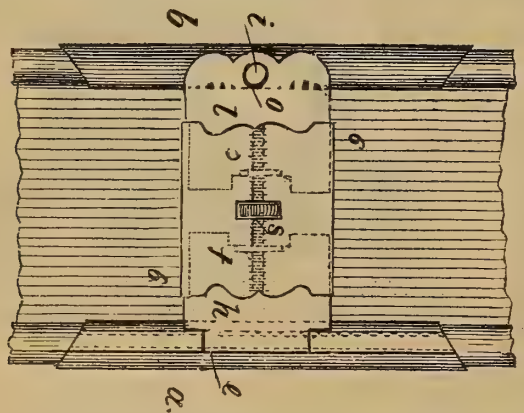
2. In a book-locking clasp, the hasp A, pivoted to its attaching-plate, whereby it may be folded down parallel with the book-cover, so as not to obstruct the manipulation of the leaves, substantially as described.

3. The combination, in a book-locking clasp, of the extensible stem D and pivoted receiving-sleeve A with the ock B, all constructed and arranged substantially as described, for the purpose specified.

Reissued Letters Patent No. 10,133, dated June 6, 1882.

Original No. 191,992, dated June 12, 1877; application for reissue filed January 28, 1882; patented in England October 30, 1876, No. 4,197.

JULIUS MÜLLER AND EDWARD HILPERT.



CLAIM.

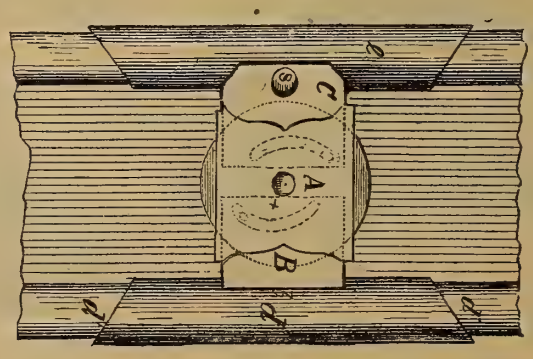
1. The combination, in an album-clasp, of two parts, A B, one part sliding within the other, and springs to move said parts and apply a pressure to keep the covers of the album closed, substantially as set forth.

2. The combination, with the hinge and the catch upon the respective book-covers, of the two-part extensible clasp, one part sliding within the other, connected with such hinge and springs between the two parts of the clasp to apply pressure to the covers of the book or album, as set forth.

3. The combination, with the two-part book-clasps, one part sliding within the other, of springs introduced between the said two parts of the clasp to apply spring-pressure to shorten the clasp and draw the book-covers toward each other, as specified.

4. In a clasp for books and albums, the combination, with the plate A, having projections *f*, of the case B, projections *g*, springs D, and hook *c*, substantially as set forth.

Letters Patent No. 252,100, dated January 10, 1882.



Application filed May 31, 1881.

ALFRED C. HAFELY.

CLAIM.

1. In a clasp adapted to be secured to a book, the combination, with the two-part extensible clasp *h l*, of a right-and-left-hand screw and thumb-wheel, substantially as set forth.

2. In a clasp adapted to be secured to a book, the combination, with the two-part extensible clasp *h l*, of the right-and-left-hand screw and thumb-wheel and the cap plate *t*, through a slot in which cap-plate the thumb-wheel projects, substantially as specified.

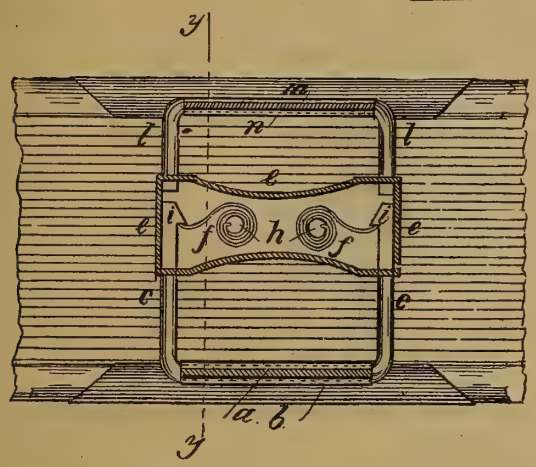
Letters Patent No. 240,314, dated April 19, 1881.

Application filed January 26, 1881.

WILLIAM J. FITZGERALD.

CLAIM.

In a clasp for albums or books, the combination of the central plate, A, having lips *a a* arranged at its side edges and adapted to form guides upon its rear side, the disk D, adapted to revolve upon a central axis, *x*, of the plate A, and having eccentric grooves or slots *m n*, side or extensible plates, B C, having studs *o o*, entering the grooves or slots of the disk D, and one adapted to be hinged to the album or book-cover edge and the other to receive a stud of the other edge of the cover, and a back plate, E, as shown and described.



The above are some of the **PATENT EXTENSION CLASPS** owned by us exclusively, and which we are prepared to supply on application. ☞ Many of them are to be found at present in our various styles of **PHOTOGRAPH ALBUMS.**

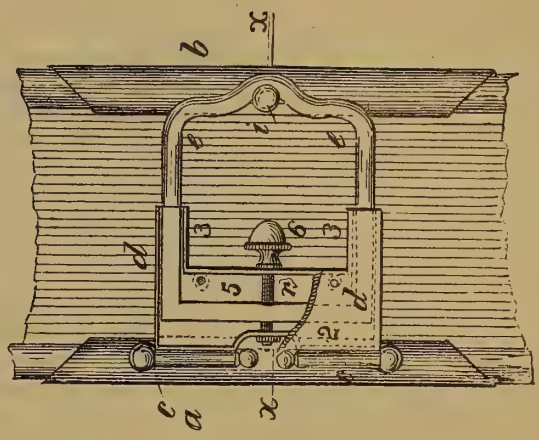
EXTENSION ALBUM CLASPS.



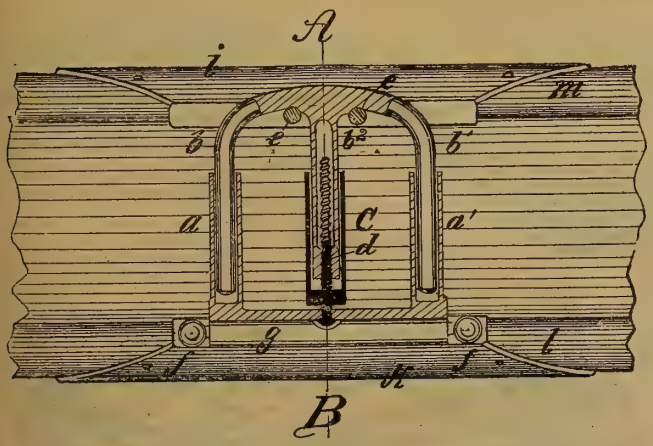
Letters Patent No. 233,174, dated October 12, 1880.

Application filed June 18, 1880.

LEONHARD VORPAHL AND HERRMANN POHL.

CLAIM.

In combination with the clip-plates *a m* and loop *c*, the box *e*, springs *f*, and bow *l*, the ends of the loop *c* adapted to slide within the box *e*, and having the projections *i* for the ends of the springs, substantially as set forth.



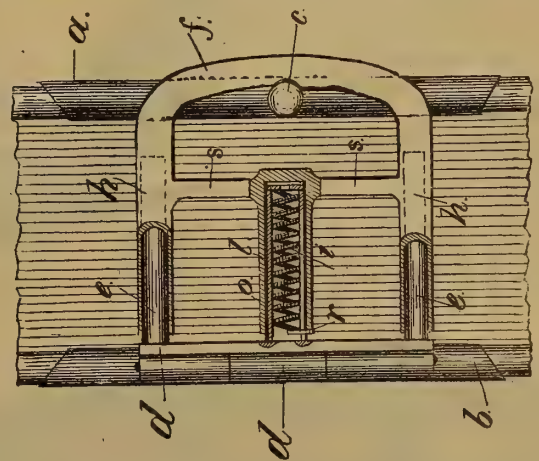
Letters Patent No. 252,226, dated January 10, 1882.

Application filed July 5, 1881.

JOHN C. KOCH.

CLAIM.

The combination, in a book-clasp, of the clips *a* and *b*, the box *d*, hinge *c*, connecting the same to the clip *a*, the frame *e*, having a cross-bar within the box, the screw *r*, also within the box, and passing through the cross-bar, and having a head, 6, outside the box, by which it can be revolved, substantially as set forth.



Letters Patent No. 250,536, dated December 6, 1881.

Application filed June 14, 1881. Patented in Germany May 1, 1881.

ERNST P. HINKEL.

CLAIM.

The improved book-clasp, consisting of the cross-piece having journals for connecting with the cover of a book, the tubular guides *a a'*, and the pivoted intermediate rotating tube *c*, having central screw-shank *d*, the hasp having prongs *b b'* and the intermediate prong b^2, having a screw-socket for engaging with the screw-shank within the tube *c*, all substantially as and for the purpose specified.

Letters Patent No. 253,281, dated February 7, 1882.

Application filed December 27, 1881

ALFRED C. HAFELY.

CLAIM.

1. In a book-clasp, the combination, with the extensible clasp, of the finger-pieces *s* near the middle of the clasp, substantially as set forth.

2. In an extensible book-clasp, the tubes *h*, side pieces *e*, bow *f*, and tube *l*, in combination with the spring *i*, tube *o*, hinge *d*, and clips *a b*, substantially as set forth.

The above are some of the **PATENT EXTENSION CLASPS** owned by us exclusively, and which we are prepared to supply on application. ☞ Many of them are to be found at present on our various styles of **PHOTOGRAPH ALBUMS.**

KOCH, SONS & CO., 156 William St., New York.

1882. PAPER HANGINGS. 1883.

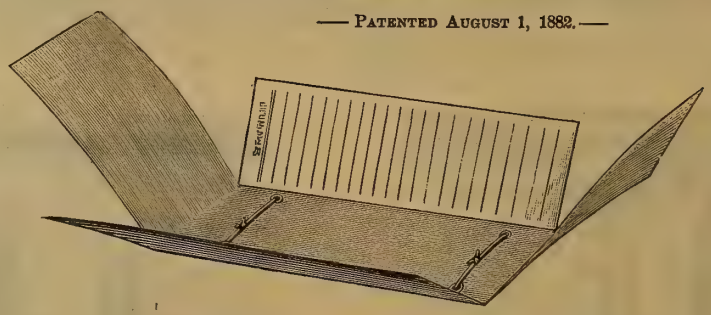
By way of Customary Annual to the Trade, we beg to submit that the Samples now in our Agents' hands for Fall and Spring have been selected with most scrupulous care, and after an exhaustive examination of **All New Designs** cut by Standard Factories for the season's distribution.

We claim for the product a far **Higher Degree of Excellence** than heretofore compassed by any individual House, approximating, as closely as possible, a **Perfect Assortment.** Prices being equal, the comparative merit of those lines submitted to your notice will doubtless, to a great extent, control selection.

We challenge and respectfully solicit direct comparison of our collection with those of any other Houses representing that branch of artistic industry which is our **Exclusive Specialty.**

The untiring effort of over thirty years, which has resulted in our sales being the largest recorded for the past two seasons, has also given us an intimate knowledge of the wants of that widely extended trade to which we cater. This fact, coupled with unvarying promptness and watchful care of our customers' interests, will, we feel assured, secure for us a continuance of your esteemed patronage.

Our Agent will indicate, by direct correspondence, the date of his visit. Failing receipt of such advice, Samples shall be forwarded, free of expense, upon receipt of request.



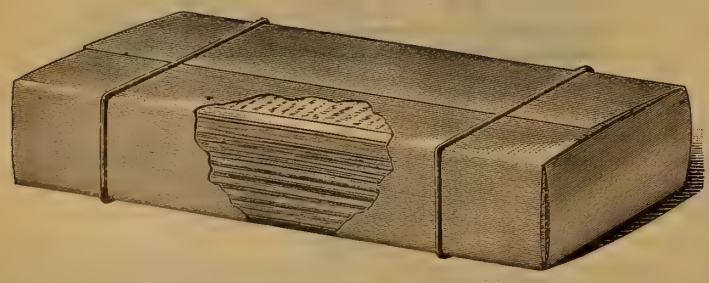
Very truly yours,

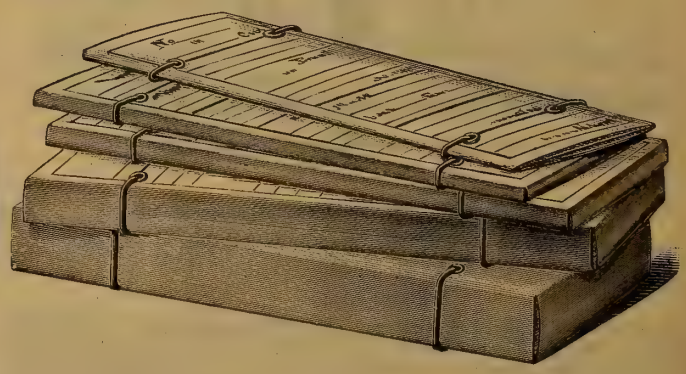
JOHN J. McGRATH,

174 & 176 State St., Chicago.

REVERSIBLE DOCUMENT ENVELOPES.

— PATENTED AUGUST 1, 1882. —





These Envelopes are made of the very best quality of stock and have the following advantages over all other Document Envelopes:

1. **ADJUSTABLE.** Conforming to the number of papers enclosed, being equally useful for a single document, or a large number, as shown in cut, and will take paper full length of Envelope laying perfectly smooth and flat.

2. **REVERSIBLE.** Enabling persons to send by mail any documents by reversing the envelope and preserve the endorsement thereon, the rubber cords passing through and presenting the same appearance on either side.

Approved by all who have used or seen them.

CINCINNATI PAPER NOVELTY CO., No. 124 WALNUT STREET, CINCINNATI, Ohio.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Willy Wallach shows a beautiful line of valentine and birthday cards, which the trade ought to see.

J. A. Osborne & Sons, paper manufacturers, East Pepperell, Mass., have failed. They began in June, 1881.

The copying books of William Mann, Philadelphia, are selling rapidly, as they are considered as among the best of the kind in the market.

Willy Wallach has received a large shipment of imported stationery, which includes Antoine's ink color boxes, mathematical instruments, dyes, chests, &c.

Nagle & Co., manufacturers of blank books, Philadelphia, are doing an exceptionally good business. Their Philad elphia printed legal caps are selling very fast.

The department of stationery, blank books and printing at Wm. F. Murphy's Sons, Philadelphia, is very active. This firm has a very large assortment of fancy stationery goods.

E. T. Seamans, dealer in stationery at Naples, Ohio, is reported to have failed. He gave a bill of sale on stock to H. C. Whitman for $1,200, and a mortgage to his brother-in-law for $1,200.

Geo. D. Barnard & Co., of St. Louis, had, at the exhibition just closed in that city, an exhibit which attracted great attention. It occupied a space eighty feet in length, and cost the firm over $10,000.

The failure of Culver Brothers & Co., paper manufacturers and dealers at Syracuse and Pulaski, N. Y., which was announced last week, is attributed to a heavy loss and competition with younger houses, which took away many profitable customers.

William E. Kern, one of the best firms of Philadelphia, dealing in artists' material, has, since last year, increased his business a great deal. Mr. Kern makes a specialty of tapestry painting materials, which are now the latest novelty, and in great demand. The same firm is the sole agent in Philadelphia for Devoe's oil-colors.

Ezra E. Bliss, dealer in stationers' hardware at No. 58 Fulton street, made an assignment Monday to John W. Wiggins, without preference. He started in 1876, and was of the firm of Bliss & Trowbridge, who failed about eighteen months ago and compromised at 33⅓ cents on the dollar. Judgment for $293 was entered against him about a week ago.

One of the handsomest and most unique lines of charm pencils ever designed and exhibited in this country, is that just brought out by Leroy W. Fairchild, of No. 1 John street, this city. They come in gold, silver and rolled plate, and embrace every style of workmanship. Some are hammered, others are carved and elegantly inlaid. Among the new designs are those representing cable, stripe, armor, scales, corrugated bands, fancy carvings, rustic work, alligator skins, appliqué, rich settings, etc. No description of these goods can do them justice, and they must be seen to be fully appeciated. Attention is directed to the illustrations contained in an advertisement to be found on another page.

The annual procession of the "Veiled Prophets" is as important an event in the annals of St. Louis as the Carnival is to Venice or Rome, and everything connected therewith is required to be got up in the most exquisite style. Especially is this true of the lithographed invitations, programmes, &c., which heretofore have been ordered from Paris; but this year, by way of experiment, the work was secretly given to the Compton Lithographing Company, of St. Louis, and that firm excelled even its own famous work in this case. The invitations are printed in a most exquisite blending of colors, on a banner of satin, and the programmes, in the form of a sheath-knife, are very tastefully gotten up. The quality of the work is attested by the remark frequently made to THE STATIONER correspondent, that "Paris has excelled herself this year."

The Hover manuscript paper, sold by H. L. Lipman, Philadelphia, is in great demand. It is now said to be the best manuscript paper on the market. For the occasion of the Philadelphia Bi-Centennial it is printed in note-size, in outline tints, with representations of the Landing of Penn, Independence Hall, the public buildings, and the new post-office. This article has found a ready sale. The sale of the Lipman "Indispensable" eyelet machine, manufactured by the same firm, has been increased considerably.

Moss & Co., Philadelphia, have this year imported directly from Europe a very good line of photograph albums, cigar cases, gentlemen's necessaires, and a great many other fancy articles, for which this firm has a reputation in the trade; they have also a very extensive assortment of desk covers for children, and new embroidered school bags.

Mallette, Anable & Co., have opened a new stock of stationery goods, blank-books and artists' materials at 316 Main street, Springfield, Mass. Mallette & Anable have been with James D. Gill for the past three years. The firm has a new, clean stock, a light, pleasant store and central location.

R. Fideau, 16 Beekman street, has ready in stock his new holiday school-bags and new open-work-bags made with patent cords. The trade are requested to examine those goods. Mr. Fideau offers to forward samples to jobbers free of expense.

Douglas Hapeman, of Hapeman & Graham, Ottawa, Ill., Mr. Whitmore, of Scranton, Whitmore & Co., and Mr. Avery, of Steele & Avery, Rochester, N. Y., were among the visiting members of the trade in the city this week.

George Chater, of the firm of Grosvenor, Chater & Co., paper manufacturers and dealers, London, arrived at New York on Wednesday of last week by the Bothnia. He will make a rather hurried trip through the country.

Business is very brisk in the stationery department of J. B. Lippincott & Co. They are working with great activity to fill the orders which they are constantly receiving from all parts of the United States.

George McDowell & Co., Philadelphia, are doing a splendid business in their new quarters. They have all of their travelers on the road, and every one of them is succeeding splendidly.

E. G. Locke & Co., Philadelphia, have a fine assortment of glazed and fancy papers, paper laces and cardboards, also a great variety of chromo advertising cards.

William Ware & Co. announce the "Old Farmer's Almanac" for 1883.

Thomas W. Price Company, Philadelphia, reports a very good business in its advertising specialties, for which it has a very extensive trade. Its department of job printers' supplies is also very active.

Samuel M. Simmons, formerly with John Gladding & Son for over sixteen years, and lately with Charles H. Sherman & Co., is now open for an engagement. His present address is No. 402 Library street, Philadelphia.

The Philadelphia Novelty Manufacturing Company has an increasing demand for its paper-fastener, which is one of the best articles of the kind manufactured in this country and in Europe. Its orders for exportation are larger than ever.

Wolf & Co., Philadelphia, are selling more chromo cards for Christmas, New Year and advertising purposes than ever, and are doing a big business in these goods. A pallet very richly and tastefully ornamented is their latest novelty.

Charles J. Cohen, Philadelphia, has received an invoice of porcelain slates, in five sizes, well and neatly framed and at lowest import prices. Plush mats, in three sizes, for the counting-room or library, are a late staple novelty by a recent shipment from Europe.

Potsdamer & Co., Philadelphia, have just put on the market some very desirable genuine tambourines, in four different designs, and which are meeting with great favor. They have also issued two very nice designs of embossed baskets, with figures of dogs and cats; also six new fancy chromo cards, and five new sets of folders in black-edged goods.

The National Color Printing Company, Boston, Mass., has failed. Liabilities, $100,000; the assets include valuable patent rights at Trenton, N. J., and Europe, machinery, and about $80,000 unpaid stock. I. P. Morris Company, of Philadelphia, on September 19, attached the unpaid portion of the stock held by Chicago stockholders, on a claim for $19,770. In March last the company mortgaged plant for $15,000 to C. A. Browne. The company was incorporated under the laws of New Jersey, May, 1880, with an authorized capital of $300,000, of which $50,000 was paid in.

Henry Levy & Son's exhibit of manufactured articles in plush, satin, leather and cretonne are marvels of artistic industry, and their useful adaptability is a feature. Their cost is sufficiently reasonable to bring them within the purchasing power of the million. The firm prides itself on the originality of designs, durability of material, and excellence of workmanship. Some late additions to the firm's previous large display have been shown in brush-cases, toilet brackets, nail sets, work-boxes, jewel-cases, liquor-cases, combination smoker sets, &c., all of which the trade are asked to inspect before completing their purchases for the holiday season.

The West is every year becoming more and more particular in taste, and no longer, as in years past, will Eastern stock "left over" from last year fill the bill anywhere in the States beyond the Ohio. Not only are Western houses rivaling their Eastern competitors in the beauty and quality of their goods, but in those which are purchased from the East the very highest styles prevail. That this is not less true of stationery than of other goods would be acknowledged by any one who would look over Snider & Holmes' (St. Louis) selection of ball programmes, wedding goods, visiting cards, &c., for this season. The list comprises eight pages,

containing a great variety of exquisite goods, and will be sent on application.

Alfred Staven, dealer in fancy goods, Portsmouth, N. H., has sold out to J. W. Wilson.

Hutchinson Brothers, publishers, Olathe, Kan., have been burned out. Loss, $6,000; insured, $2,000.

W. W. Perry, publisher of the *Herald*, Camden, Me., has sold out to the Camden Publishing Company.

The "Handy" blotter, made by Alvah Bushnell, Philadelphia, is one of the most simple, cheapest and most popular blotters in use.

The stock of birthday, holiday and advertising chromo cards at T. M. Simpson's, Philadelphia, is very extensive and particularly good; it sells very rapidly. One of his special articles is silk fringe for cards, of which he sells large quantities.

Charles Beck, Philadelphia, has a large assortment of imported English, French and German birthday, Christmas and advertising cards, for which he has a considerable sale. He also reports a good trade in gold, silver and fancy-colored papers and cardboards.

Dreka, Philadelphia, has received for the holidays an assortment of novelties which is said to be the richest and most elegant of the kind to be found anywhere. He makes a specialty of wedding and reception invitations, for which his great reputation it established all over the country.

Cook & Cobb are very busy filling orders for their "favorite" letter-file, for which they are behind, and find it almost impossible to catch up. They have just brought out a novelty in the shape of a combined desk-blotter and indexed portfolio. This article will be found useful in making out bills and statements, keeping them alphabetically arranged when completed.

Selchow & Righter, 41 John street, New York, have just issued their catalogue of games and home amusements for the season of 1882-83. The book contains 100 pages of illustrations and prices of an innumerable number of popular toys, many of them quite new. This firm is fully equipped for the holiday trade and carries full lines of popular games, toys and materials for house and outdoor amusement.

J. L. Shoemaker & Co., Philadelphia, manufacturers and importers of bookbinders' material, have so many orders that to fill them they were obliged to increase the capacity of their factory. Their new fancy lining papers, which they make to order in any color, find a good sale. They manufacture also a new marbleized leather on sheep-skin or calf-skin, richly gilded, which is a novelty very suitable for binding holiday books. They have on the road two traveling men, who are constantly sending very large orders.

The pretty little volume of society verses, by George A. Baker, Jr., entitled "Point Lace and Diamonds," has been out of print for some time, but its scarcity in the book stores has only seemed to whet the public demand for it. In response to this demand, R. Worthington announces a new edition, containing several new poems which must class with the author's best efforts. One of these is in honor of New York city's pet regiment, the Seventh, showing that their fighting record is as good as their flirting record. Mr. Baker is very happy in his hits at society, and his versatility leads him to pathos and humor by turns. The verses are very bright and wholly entertaining, and Addie Ledyard's dainty pictures nicely fit the poems.

Obpacher Brothers show one of the most exquisite lines of Christmas goods in the shape of fancy fringed cards in the market. It has been prepared with great care, and embellished in a style that evinces great taste. Among the most noticeable are "Marguerite" and "Parterre" series. The first consists of French ideal heads on panels, which open and shut like doors, on a floral ground, and are richly embellished with a puffed trimming and a background of loop and patent fringe, all being mounted on a gilt-edged panel. The "Parterre" is similar, except that the designs are floral substitutes for the ideal heads. The line of bannerets is very unique and comprises thirty different series, which are at least equal to any in the market; they come in satin, mounted on gilt edged panels. The firm shows a neat line of calendars, both plain and fringed. In fringed calendars there are ten different series, each design having the dates, mottoes and descriptions lithographed, and in plain there are about twenty different styles. There are also blanks for calendars, which are meeting with a great demand. The "Gem" palette is the firm's leading novelty, and it can be furnished either in Christmas or Birthday form, or without mottoes. It is having an immense sale, and orders are duplicated by everyone who has handled it. It sells at sight. The satchets and souvenirs come solely in satin and are very attractive. A new specialty of the firm is its satin sheets for manufacturing purposes. Although only recently introduced, these goods have taken exceedingly well, and it would be worth while for manufacturers of novelties to call and see this line. The firm will in a few days have ready samples of valentines, Easter and new birthday cards.

Grosvenor, Chater & Co., of 68 Cannon street, London, England, who are the owners of Glory Mills, Woburn, Bucks, England, and Abbey Mills, Holywell, Flintshire, Wales, have forwarded a copy of their sample-book of papers. The book contains eighty-four specimens of the firm's productions, comprising fine hand-made papers, J. D. H. drawing papers, pure linen-laid and wove posts, superfine laid and wove in various sizes; a nice lot of friction glazed envelope papers, several series of printing papers, and a series of blottings. Though not as highly surfaced as American papers, the samples appear to be pure and strong.

Turner & Harrison, steel pen manufacturers, Philadelphia, report business very good with continued increase of trade; this firm is certainly building up its business on the fine quality of its goods. It has just brought out new series of pens, and has adopted the word "Constitution" for the same. These are very beautifully put up with handsome labels, showing our leading national emblems, &c. The series is meeting with great favor from the trade, and all who use them give the pens the highest commendation.

The October number of *Our Little Ones* completes another volume, and affords an opportunity for paterfamilias to have bound a handsome volume which will make about as welcome a present as could be offered to the appreciative juvenile. Such pure literature as that contained in each number of this publication cannot fail to effect a good influence on the rising generation.

The Powers Paper Company, J. L. St. John, agent, offers 200 cases of 6½-inch slate pencils, 100 in a box, 10,000 in a case, at 72 cents per M. Not less than five cases will be sold at this price, and this for a limited time only.

J. L. Rhees, newsdealer, &c., Wheeling, W. Va., has sold out to W. V. Brown.

It is with regret that the announcement is made of the illness of G. A. Whitaker, bookseller and stationer, Washington, D. C. For the past four weeks Mr. Whitaker has been confined to his bed with typhus fever.

The Jos. Dixon Crucible Company, Jersey City, N. J., announces its second annual list of one hundred and ninety prizes, amounting in value to $1,000. The prizes are to be awarded for the best drawings made with Dixon's American graphite pencils.

A contemporary gives a flattering description of the establishment of the Bangor News Company, from which it is gathered that this company is not only noted for the standard quality of its goods, but also for the great bargains which are offered to customers.

Chas. T. Bainbridge's Sons, 33 Beekman street, New York, are still meeting with great success in their department of illustrated and plain tuck circulars. As advertising mediums these circulars are attractive, and are at the same time not too demonstrative. This firm has got out a new thing called "Damask Rainbow" stationery.

Barnum & Co., 169 William street, New York, have forwarded samples of a somewhat extensive assortment of New Year calling and mailing cards. The designs are mostly neat and executed in beveled or fringed Bristol. The prettiest styles are 339, 340 and 341; these are folded and single gilt-edged Bristol cards with miniature envelopes affixed and their excellence consists in their pleasing simplicity. The firm has a full price list of these goods.

Charles J. Cohen, Philadelphia, has issued a new net price list of envelopes, specially adapted for inclosing birthday, Christmas, and New Year cards. There are twenty different sizes, which may be bought by the thousand or by the box, put up 500 assorted, which gives the dealer 25 of each size. This is an admirable plan and meets a want long felt by those dealing in cards. The foreign scrap-books imported by Charles J. Cohen are having a very extensive sale. They are neat, attractive, and it is stated, much lower in price than domestic goods.

The copying presses of T. Shriver & Co., 333 East Fifty-sixth street, New York, are widely known to the trade, and present the advantages that they are of handsome design and finish. Their construction is of most durable character, and the impression surfaces are made perfectly true in machines designed for the purpose. The copying brush, with reservoir handle holding water enough to wet 100 pages of the letter book, is an article that deserves to be better known to the trade and to the public. Messrs. Shriver report business as very active, with a good demand for large presses used by railroad, express and transportation companies.

Boorum & Pease are reported to be very busy in all of their departments. Orders are coming in freely, and they have to work nights in order to fill orders with satisfactory promptness to the trade. In photograph albums and fine leather and plush boxes they are getting out new patterns all of the time for the holidays, and although this line is already very large, they are driven hard to manufacture enough to fill orders. The trade coming to New York should not fail to visit their establishment, as they will find goods there which will show on their face that they will take with the public, and the prices are kept always low as possible. They are very much encouraged by their success this year in ther new departure of manufacturing photograph albums, and their experience this year will enable them to make all preparations

necessary for the next season, so that their line will compare favorably with imported goods at all times in quality, prices and novelty.

Stocking & Atcheson, publishers of the *Observer*, Washington, Pa., have dissolved partnership. E. F. Atcheson continues.

Nathaniel Bloom's line of novelties is attracting great attention. The firm shows many beautiful specimens which deserve commendation.

Samuel Raynor & Co. show a fine line of French papeterie boxes for the holidays, and have just issued their new list of prices of papeteries, embracing some two hundred and fifty styles at reduced prices.

Alexander Agar and Wm. Irwin Martin have been again appointed judges in the stationery department of the American Institute. This is the seventh year that Mr. Agar has served in this capacity, and the third for Mr. Martin.

The fortunes of the German Palatines in the American revolution, have suggested a new book by a new author, entitled "Paul and Persis; or, the Revolutionary Struggle in the Mohawk Valley." The story is founded on fact; the author, Mary E. Brush, being a descendant of the Palatines.

Langfeld, Turner & Andrews, Philadelphia, are selling enormous quantities of ladies' plush and leather hand-bags. They have a great demand for their card and leather cases, pocket-books of every description, calf and sheep wallets, bill-books, drawer pocket-books and satchels. Although their business last year was larger than it had been at any previous time, the amount this year will show a still greater increase.

The Executive Committee of the Standard Envelope Company held a meeting in this city a few days ago, and decided to maintain the present list of prices. The reports are that prices are being lived up to by the manufacturers in New England, New York, and Philadelphia, and that the wholesale trade throughout the country are satisfied of the intention of the manufacturers to maintain a uniform list for the large jobbing and wholesale trade.

Among the visiting members of the trade in the city during the past week were T. A. Worley, of T. A. Worley & Son, Covington, Ohio; H. H. Shepard, Kansas City; T. H. Payne, of T. H. Payne & Co., Chattanooga, Tenn.; Mr. Crane, of Hatch & Crane, Jamestown, N. Y.; J. F. Joy, Philadelphia; Mr. Conner and Mr. Mitchell, of Conner & Mitchell, Haverhill, Mass.; Mr. Hosey, of Ormiston & Hosey, Oil City, Pa.; Francis Roarke, Troy, N. Y.; A. E. Philips, Sanford, Fla.; W. B. Barnes, Mehoopany, Pa.; W. D. Spindle, of Spindle & Brother, Christiansburg, Va.; Mr. Brown, of Brown Brothers, Toronto, Canada.

Philip Hake shows this week some samples of his new line of valentines, comprising about sixteen designs. One of the handsomest is the plush panel, in assorted colors, with a puffed satin centre-piece, a lifting cover of plush, displaying an oval mirror, the whole standing on an easel back. The centre-piece or mirror-cover forms a bouquet of chenille flowers. Another pretty design is an oval card with a wide ribbon pleated around it. The ground-work of the cover is in plush, ornamented with a porcelain flower. Another design is a square of lace work with silk fringed border, and fancy flowers for centre-piece. Another is of puffed satin, with a diamond-shape centre-piece, with velvet flowers, hand painted.

A new magazine designed for a "hitherto unoccupied field in American periodical literature" has just made its appearance. Is is called the *Wheelman*, and, to use the editor's words, "is to hold the same relation to bicycling weeklies that the literary magazine holds to the newspaper press." To those who are not aware of the extent of the "cycling" movement in this country the magazine may seem a bold venture, but there cannot be any readers of its interesting contents who will not wish it success, and it is impossible to withhold a conviction that the magazine is so good that it will command what it certainly deserves—unbounded popularity. It is well written, well printed and well illustrated. Of course, the *Wheelman* radiates from the "Hub."

The committee of the Stationers' Board of Trade appointed to present the engrossed resolutions passed by the Board at the time of the death of the late Daniel Slote, to the widow of the deceased gentleman, will perform that duty to-morrow evening, at her residence in Brooklyn. The delay was caused by the burning of the first draft by the fire at Koch, Sons & Co.'s several months ago. The draft to be presented has been beautifully engrossed and bound, and is a handsome memorial of its character. The committee is composed of George L. Pease, *ex officio* chairman; George H. Jones, George W. Davids and Wm. Irwin Martin.

It has been suggested that retail dealers throughout the country will do well to keep on hand a good assortment of Brentano's jet black ink, as the demand is constantly increasing, and it is thought to be only a question of a short time before all must have it. The trade are therefore invited to take time by the forelock, and to get ahead of their neighbors by keeping on hand Brentano's "jet black ink."

The Floto Manufacturing Company has just introduced a new palette sachet which is neatly gotten up. The ground work is of rich satin which is quilted with silk thread of a complimentary color, and the embellishments consist of lithographed satin designs and of a border of thick fringe. This is a rare article, and is meeting with great demand.

McCarty & Hasberg have just opened some striking novelties in Xmas goods, which embrace a large number of articles suitable for stationers' use; the decorations are rich, and are also pertinent both to the goods and to the season. The firm controls the sale of these articles in this country. The trade should see the line.

The Continental Manufacturing Company, Philadelphia, reports a very good fall trade. Orders from the South and California are steadily increasing. The company has doubled its working force in order to satisfy its customers. The sale of mucilage is beyond expectation.

Myers Brothers report business as being immense. An unexpected demand is being made for their new goods, most of which were described in the STATIONER. Every week the firm is adding to its line of novelties.

Aiken, Lambert & Co. show a rare line of goods for the holiday season, many of which are novelties of the most exquisite design. Parties wanting articles in this line should see the firm's stock before placing orders.

Sarony has made a contract to take photographs of Mrs. Langtry, and parties desiring pictures of this lady should apply at once to E. & H. Anthony & Co., who control their sales.

Clark & Walker, publishers of the *Star*, Terrell, Tex., have been burned out.

John Waters, bookbinder, Norfolk, Va., has sold out to Henry Jakeman.

John Petrie, Jr., successor to Victor E. Mauger & Petrie, reports an unusually large demand for A. B. French inks.

August E. Gans has resigned the management of the stationery department of the E. Jaccard Jewelry Company, St. Louis. The reasons given by Mr. Gans for this act seem to justify his withdrawal.

W. B. Todd's standard "Government" writing ink is manufactured by the Government Ink Company, Philadelphia. This ink is offered to the trade as a permanent and reliable writing medium, useful for commercial and all record purposes.

James D. Whitmore & Co. are showing a large line of new styles, designs and effects in menu and guest cards. In their regular line of orders of dance they have a varied, large and tasty assortment. Their new styles of fancy orders of dancing show effects in silk, satin, fringe, plush and ribbons, feathers, &c.

The Parmenter Crayon Company, Waltham, Mass., proprietor of the American Crayon and Slate Company, New York, has issued a new price list for its goods. The same company has also issued a circular to the effect that it will protect any dealer selling the Waltham dustless crayons.

Glines & Snyder, booksellers and stationers, Marietta, Ohio, have added 20 feet to their store, making it 120 feet deep, and they think that they have now "the finest store and stock in Ohio, outside of the large cities." They anticipate a good trade, and say that people are looking for finer goods.

Raphael Tuck & Son, 72 and 73 Coleman street, London, England, write to THE STATIONER that the Forbes Company of Boston and New York is the sole agent in the United States for their line of cards, the agency dating from April last. No other firm has been supplied by them with samples, and goods can only be obtained through the Forbes Company.

The Holyoke Envelope Company is offering a line of goods, which it specially commends to the trade. Its No. 2 whites and colored manillas are particularly noteworthy. These goods are claimed to be always full weight and of the best gumming, so that printers prefer them because they do not injure the type. The company asserts that its line of No. 2 goods is the best made.

Robert Clarke & Co., Cincinnati, include in their list of late publications three works on photography by Elias Longley, Hough's Elements of Forestry, Hovey's Celebrated American Caverns, The St. Clair Papers, Morgan's Shakespearean Myth, Butterfield's Discovery of the Northwest, Henshall's Book of the Black Bass, W. D. Gallagher's Poems, Hart's Anglo-Saxon Literature, The War of 1886, Ballard's Insect Lives, Van Horne's History of the Army of the Cumberland, &c.

James D. Whitmore & Co.'s line of plush boxes is said to be the finest they have ever shown to the trade. Very rich colors, excellent assortments, odd styles and curious effects are the leading features of this line. A unique new paper for correspondence use is called the "Poecile," and is furnished in five different colors. It is also put up in papeterie form as well as card cabinets—both plain and gold-edge. The same firm has brought out several new ideas in visiting cards; the very latest is the "Koneih" shape. The "Cairean" card, introduced last spring, is the most taking shape of invitation

card ever gotten out by that house. It is still having a big run.

H. W. Turner, printer, New York city, is dead.

Alex. Torges, Jr., publisher of the *Freie Press*, Cincinnati, Ohio, is dead.

J. A. Osborn & Son, paper manufacturers, Pepperill, Mass., have failed.

James Taylor, dealer in stationery, Portland, Oregon, has been burned out.

Mrs. L. Garvin, publisher of the *Western Press*, Mercer, Pa., has sold out.

The National Color Printing Company, Boston, Mass., has failed, and its stock has been attached.

Burnley & Leckie, paper-stock dealers, Philadelphia, Pa., have dissolved partnership. Patrick Leckie will settle.

Perkins & Rohrer, publishers of the *Register*, Iola, Kan., have dissolved partnership. Scott Brothers & Rohrer succeed.

The firm of Osman & Hapeman, printers, booksellers and stationers, Ottawa, Ill., has been changed to Hapeman & Graham.

Cannon & Young, publishers of the *State Sentinel*, Henderson, Ky., have dissolved partnership. Thomas L. Cannon continues.

C. F. McGlashan, publisher of the *Press*, Santa Barbara, Cal., has admitted W. Knisell to partnership under the style of McGlashan & Knisell.

Geo. A. Leavitt & Co., book auctioneers, New York city, have dissolved partnership. G. A. Leavitt continues the business under the same style.

Gebhard & Pease (successors to John A. Gebhard), dealers in paper and printers' materials, Detroit, Mich., are about to remove to 48 West Larned street, in that city. This firm carries a large and varied stock.

Spencer Spence, dealer in books and stationery, Ithaca, N. Y., is reported to have failed, making preferences for $1,721. The unpreferred claims are said to amount to $1,821, and his total liabilties, inclusive of mortgage on real property, to $7,130.61. His unencumbered assets are valued at $2,718,86, and it is thought that the unpreferred creditors cannot secure 10 per cent. of their claims.

James Campbell & Son, Toronto, have published a series of "Canadian Scenery" Christmas and New Year cards, chromo-lithographed. Some of the scenes are very inspiriting, and the cards are a pleasing addition to the great variety in the market. An appropriate verse appears on the back of each card.

The New York Silicate Book-Slate Company, 191 Fulton street, New York, has a full and useful line of blackboards, the most recent pattern being the "Daisy" home blackboard. This is a revolving blackboard, 19x26 and 4 feet high. It can easily be taken apart or put together in one minute, and can be quickly adjusted to any angle. It is furnished with an oil-finished frame.

The surviving partners of the firm of Young, Lockwood & Co., Buffalo, N. Y., in making announcement of the death of Charles E. Young, the senior member of the house, from heart disease on September 29, state that in the articles of copartnership, provision was made that in the death of either of the partners, the survivors should continue the business until the expiration of the partnership. And they therefore announce that the concern will be continued in the same way and under the same firm-name as heretofore.

Max Bloomfield, bookseller, stationer, &c., St. Augustine, Fla., has just issued an "Illustrated Historical Guide of the Antiquities of St. Augustine," with map, and alse condensed guide of the St. John's, Ocklawaha, Halifax and Indian rivers, Florida. The guide contains an excellent summary of the history and objects of interest of this notable place, and will be valued by those who do not find it always necessary to spend their vacations in foreign climes, but who rather seek out the beautiful in their own land and who venerate the early history of this mighty country.

This season is replete with attractions. Among the gift books for children, "Around the House" is likely to attract a more than ordinary share of attention. It is finely and delicately illustrated in colors, and, as its name indicates, the scenes are those of childhood's happiest hours, which will be recognized by everyone who has pleasant memories of childish days. Appropriate verse accompanies each of the pictures. The covers of the book are richly illuminated. R. Worthington has it.

M. F. Tobin has introduced this week three new series of advertising cards, all of which are very pretty. One, styled the rabbit series, shows children playing with rabbits on grassy mounds, and another, called the monkey series, is very comic. The firm has just brought a new palette, which shows a picture of Mrs. Langtry that is said to be a faithful likeness. Several new things are in course of preparation.

John P. Morton & Co., Louisville, Ky., have sent to THE STATIONER a photograph of the "Big Book," as shown by them in the late trade display in Louisville. It certainly is a monster, for, as seen in the picture, standing on the platform of the wagon on which it is mounted, its top is half up the second story windows of adjacent buildings.

The Richmond Paper Manufacturing Company, Richmond, Va., is making an "all rag" blotting called the "Star." This paper is warranted "full weight," and is put up in half-ream packages, with tough bleached rope wrappers, under a brand (with the name "Star"), the weight and color in script being stenciled in blue ink on the end.

Yakam & Ambs, publishers, Springfield, Ill., have dissolved partnership, and are succeeded by E. J. Yakam.

G. W. Fairbrother & Co., printers, South Auburn, Neb., are selling out.

The New York Crayon Company has issued a new price list of its goods.

E. P. Nichols, paper manufacturer, Manlius, N. Y., has made an assignment.

J. S. Stanger, publisher of the *Colorado Farmer*, Denver, Col., has sold out.

Fox & Struve, stationers and booksellers, Lincoln, Neb., have dissolved partnership.

H. H. Tooley has bought out F. P. Kelly, publisher of the *Tocsin*, Red Bluff, Cal.

A. R. Kennedy, succeeds the firm of Kennedy & Logan, publishers, Buena Vista, Col.

Jones & Co., publishers of the *Index*, Sonoma, Cal., have sold out to Merritt & Peyton.

A. L. Phiele, publisher, San Francisco, Cal., is advertised to be sold out by the sheriff.

The *State Journal* Company, Jefferson City, Mo., has been incorporated; capital, $10,000.

J. R. Brown, bookseller and stationer, Olathe, Kan., has been burned out. Loss, $800; not insured.

Warner, Newman & Latimer have succeeded Brown, Warner & Latimer, paper makers, Minneapolis, Minn.

Baker & McGarrey, publishers of the *Enterprise*, Anderson, Cal., have dissolved partnership. J. E. McGarrey continues.

E. G. Farmer & Co., steel plate engravers, Providence and New York, have withdrawn the agency for their cards and folders from Hart & Von Arx.

The firm of Barrett & Brown, bookbinders, Montgomery, Ala., has been dissolved by the withdrawal of Milo Barrett. W. D. Brown, James H. Crenshaw and Joseph Hammond will continue under the style of W. D. Brown & Co.

Spooner, Dudley & Co., booksellers and stationers, Leavenworth, Kan., are the successors of Spooner & Pinkston. G. A. Spooner bought Mr. Pinkston's interest in the business, and admitted James T. Dudley and Charles E. Spooner to partnership.

J. W. Paul & Co., bookbinders and paper-rulers, Philadelphia, Pa., have dissolved partnership. The same partners form a new firm, under the style of Paul & Carey, with George Barrie as special partner for $3,000 cash, to October 12, 1883.

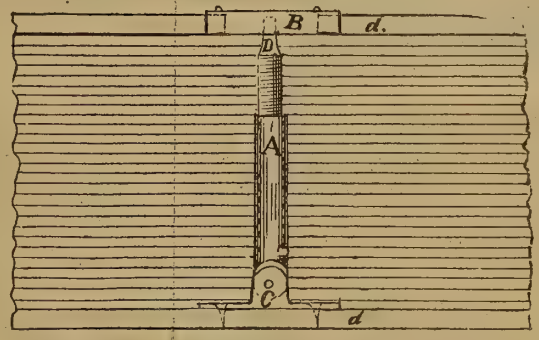
ALBUM CLASPS.

Albums have come to form an important line of manufacture, and while it might seem that there is little or no opportunity for change or improvement in either their character or construction, it is nevertheless true that modifications have been constantly going on which have effected considerable change in their details. One of the chief features in their improvement has been in the construction of the clasps, and in this as in all other details of album manufacture the firm of Koch, Sons & Co. has taken a leading part, and, as a representative manufacturing house, making a specialty of albums it has achieved a noteworthy success in their production.

It will be understood that a valuable point in the clasp of an album is its holding quality and its adaptation to books of different thicknesses.

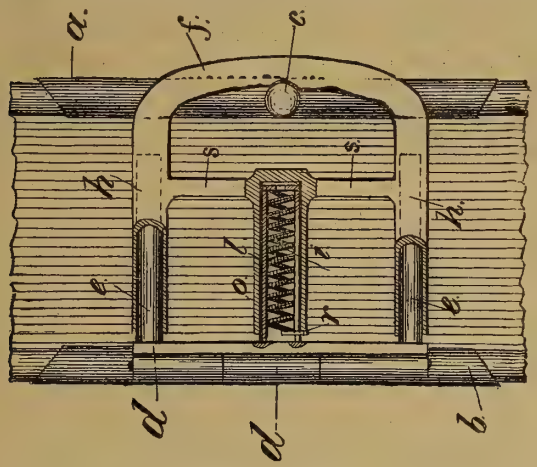
HILPERT AND MÜLLER CLASP.

The Harlan clasp has an extensible stem, D, with a screw-threaded receiving-sleeve or hasp, A. The fastening stem is made adjustable within the receiving sleeve to suit books of different thicknesses. The hasp is so pivoted to its attaching plate that it may be folded down parallel with the book cover so as not to obstruct the manipulation of the leaves.



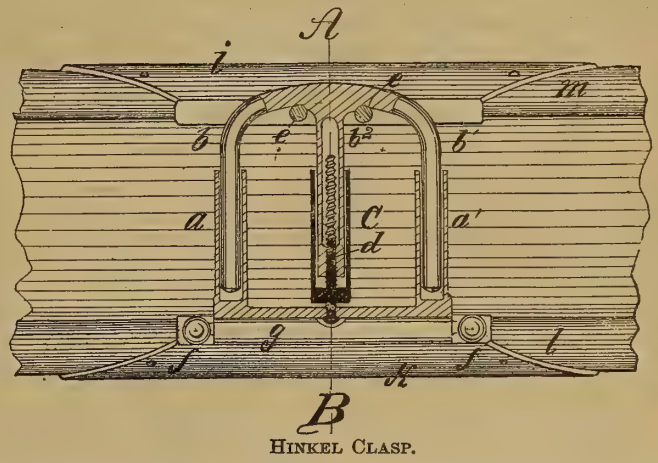
The Hafely clasp shown is an extensible clasp having finger pieces, *s*, near the middle of the clasp, and a central spring to apply the requisite pressure.

The Hinkel clasp consists of a cross piece, with journals for connecting with the cover of a book. There are tubular guides *a a'*, and a pivoted intermediate rotating tube *c* having a central screw for shortening or lengthening the clasp.



Inasmuch as these clasps and the principles by which they operate are the subjects of patents, there have been a number of patents embracing the principle of extensible clasps operated by screws or springs, and Koch, Sons & Co. realizing their value, have bought up the different patents which embody this principle and have thereby secured the sole right to its employment.

As an illustration of the character of some of these clasps, a few illustrations are given, which with the descriptions given will convey the idea of their utility and value. There is a curious coincidence in the names of the inventors of these different models. It will be observed that each of their names begins with the letter H, and Koch, Sons & Co. could very aptly take for a trade mark on their clasps, H. H. H. H.



The Hilpert and Müller clasp is a two-part extensible clasp, one part sliding within the other, and has springs between the parts to apply the pressure to shorten the clasp and draw the book covers together. The feature of this improvement is that it covers any arrangement of clasps that may be operated by means of springs.

HARLAN CLASP.

HAFELY CLASP.

HINKEL CLASP.

the trade will see the necessity of caution in buying goods which in anywise infringe upon them.

Our patience is quite as much a measure of our wisdom as our enterprise ; nay, what folly stamps every enterprise which is not begun in the patience which can bear delays as well as in the courage that can dare risks !

A writer in a German paper states that it is a custom in offices in that country to have a sliced potato on the desk in commercial houses. He does not state whether the esculent should be raw or not, but as it is not for the purpose of making *Kartoffel-Salat*, the probability is that it is not boiled. The use of the potato is to clean steel pens, and generally act as a pen-wiper. It removes all ink crust, and gives a peculiar smooth flow to the ink. He also states that the Hamburg clerks pass new pens two or three times through a gas flame, and then the ink will flow freely.

HOUSES MADE OF GLASS.

Referring to the old time method of constructing houses, a writer says : "In country houses there was an orthodox size for window panes—7 x 9 inches. There were not many panes in a sash, and consequently a small proportion, comparatively, of the sides of the building were cut away to admit the window frames. These old fashioned windows may be seen occasionally now in the country, and, strangely, in as large a city as New Orleans, for many of them are still extant in the Creole district. As larger windows were used the demand for lumber became less—not largely so for one building, to be sure; but if windows of all the buildings in the country were cut down to the size of the window of fifty years ago it would require an immense amount of lumber to make whole the walls. Glass is also used for roofs and floors. As an imitation of the finer woods it deceives the close observer, and can be put to a multitude of uses. If it be so, let the walnut go. Let the manipulators of mahogany and rosewood run up the price of their wares to their satisfaction—nobody need buy them. Given a sand bank in the earth, a United States patent in hand, and some skilled workmen, and out comes veneers representing every desired wood on the top of the earth and every valuable stone or marble in the bowels of it. An indestructible house on earth is what few have ever dreamed of. Yet, why not? Glass literally never decays. It is known to have laid in the earth for thousands of years. Old Time doesn't seem to have a mortgage on it. Time would not corrupt such a house. Lightning would not strike it.

"The glass could be colored blue, and then the inmates grow to the size of giants, live without rheumatism, and die of wrinkled old age."

PRANG'S ART NOVELTIES.

L. Prang & Co. again show in their line of fall novelties, which are now completed, the great progress for which this house has been noted every year. Last season it was thought that the climax had been reached in beauty of design as well as in conscientious and artistic reproduction, and really there seemed to be no more room for improvement. Still, Mr. Prang has managed to surpass himself again by presenting to the trade this year a new line so much larger in variety, so much tastier in design, and so much more truthful in their reproduction, that even any amateur must notice the immense progress made.

There is first a very large line of Christmas cards, which alone consists of about 275 different designs, a line of New Year cards of about 200 designs ; an entirely new line of New Year calling cards in 34 different designs ; a large addition to the already very extensive line of birthday cards, which now is formed of 81 different series, each of which contains a variety of designs ; a new line of Sunday-school text cards, of wedding congratulation cards, Thanksgiving cards, dinner cards, new copies for panel-painting, new heavy mounted panels, a large line of very artistic plaques, several very fine, larger color prints, and a variety of other goods too numerous ro mention. Upon looking over this whole line carefully, a feat which cannot be done in the space of two hours even, and when considering the immense amount of detail and of most careful work, it hardly seems possible that so much can be accomplished in a single year even by a house of such immense facilities, and such well-known push as that of L. Prang & Co. Still, astonishing as it seems, the goods are there, can be seen and bought by anybody, and the appreciation of the dealers all over the country, even all over the world, is shown in the fact, that the demand for these beautiful goods by far exceeds the possibility of supply and taxes the house to the very utmost. But even with night work and a largely increased force, L. Prang & Co. daily fall further behind in ther shipments. Such an appreciation of his earnest and unremitting efforts must in the highest degree please Mr. Prang and incite him to attempt still more.

All these different lines of goods have been fully described in former numbers of THE STATIONER, hence it is not proposed to repeat the description ; but as some time has elapsed since then, and because nearly all orders have been received, a clearer view can be gathered of some of the principal series, since the orders point out those which have found the greatest popular favor. As regards, first, the prize cards, there is little preference for any particular one, and the sales of all of the seven prizes have been so nearly alike that it is hard to say which of them is the most popular. One day one of them apparently runs ahead only to be superseded by another the next day after new mail orders have arrived. It may, therefore, be safely said that all of the prize cards this year share alike in favor, which was not quite the case last year when one particular card ran quite behind the others in sales. Much of this equality may be due to an apparent fashion of collecting them for card albums, each collector, of course, wishing to ornament his or her album with the whole set. Of the regular line of Christmas cards almost the same may be said, the sales of all being very large. Still, a few are ahead and are in their second, some even in their third, edition. Of floral designs, Mrs. O. E. Whitney carries the prize. Her two new series of fans, No. 1,021 and 1,035, find general favor and are largely represented in every order, but her designs of wild roses, forget-me nots and clover (No. 1,022), and her beautiful combination of landscapes and birds (No. 1,017) are selling equally as well, and of all these two editions have already been used up, and a third is on the way with many orders awaiting its completion. Next there are Harry Beard's excellent humorous animal designs (No. 1,018), for which the orders are also very large. Fidelia Bridges' fine designs, "Birds in the Snow" (No. 1,019), and her three flower and bird designs (No. 1,026) are also great favorites. Of figure pieces, mention might be made of Nos. 1,024, 1,025, 1,027, 1,031, 1,032 and 1,033 as special favorites. Any dealer who has not the opportunity of seeiug the samples will err in ordering these numbers. Of cheaper series not much can be said. There are few of these offered in this line and all so much superior to other cheap cards with which the market is inundated this season, that edition after edition is swallowed up without an apparent reduction in the large number of back orders. It appears from this that L. Prang & Co.'s list this year does not contain a single number which may be objectionable or slow of sale—a fact which must be very agreeable to dealers, since it means clean selling out of stock and no goods to carry over.

The New Year calling cards, a new departure, seem to have taken a hold on the buyers, and are ordered in very large quantities. Do not forget to order these.

L. Prang & Co. have been very liberal this season with their show bills, which unquestionably are a great help to the dealer by calling his customers' attention to the goods. There are signs for Christmas cards (a large sign showing a beautiful little girl in full figure, very finely executed), for Birthday cards, for New Year calling cards, for wedding congratulation cards, and several others. Thus each dealer receives at least, four different show-cards with his goods, and these go far to ornament his store and to help sales.

The new wedding congratulation cards have proved a great success, and orders for them are very heavy. In these beautiful cards, the generally acknowledged fact is most undeniably proved, that at present the demand is greatest for the finest and highest priced goods. Thus, the orders for No. 01 D, No. 01 DF, No. 353 DF, No. 064 F, on satin, and No. 080 F, also on satin, are by far larger than those for the cheaper series of this line.

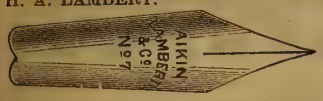
The same fact is shown in the elegant birthday line, and here, too, the most expensive cards sell best. For instance, No. 36 DF, a beautiful card in book form, was a general favorite not only last season, but is still in such demand that dealers order them in dozens, and the back orders on file now for them, unfilled for want of stock, represent a very large amount of money. Some of the high-priced satin cards are also sold out clean, and new orders have to await the new editions. To meet this demand for a most elegant and high-priced card, L. Prang & Co. have just prepared a new birthday card, called No. 81 DF. A plain paper box incloses and protects a very tasty inner box, which contains this card. The card has a fine parchment cover, with a birthday wish in gold letters, and on the four inside pages it shows four beautiful designs, two of which are printed on satin; a fifth design ornaments the back of cover. This card is certainly a most desirable birthday present, and one of on little value, too. Though the sample has only lately been shown, more to feel the market than in expectation of large sales, still the orders for this card are said to be so unexpectedly large, that it will yet take more than four weeks to prepare a stock sufficient to meet present orders without additions.

In plaques also the finest are selling best, and the stock of several of the dearest on the lately published special list has already been entirely sold out, and they cannot be had again this season on account of the great pressure of other work.

The new copies for panel painting are eagerly sought after by amateurs, artists and art schools, and they supply a want which has long been felt. This line is now very large, and specimens of it can be seen in all artists' material stores and in many of our best stationery stores. It should, however, be mentioned that not alone these copies, but also a large number of the Christmas and birthday cards, will most admirably supply this want, and a great many of the cards are bought for the purpose of using some flower or some part of them as a study.

L. Prang & Co.'s cards have long been noted for their most delicate and artistic backs, which have formed a special feature and have proved a great attraction, but it can truly be said that this season's backs are greatly ahead of those of any former season, and for delicacy of design and artistic blending of tints, cannot possibly be surpassed. They are quiet and unassuming, but in their very simplicity and their peculiar combination of soft and novel tints, in their appropriate reference to the designs they back, they must gratify even the most fastidious taste.

Dealers who have not yet placed their orders had better do so as soon as possible to secure their share of these goods before the best numbers are sold out for the season. Catalogues and price lists are furnished by any of the offices of L. Prang & Co. promptly upon application.



To conclude, it might be mentioned that L. Prang & Co. are now preparing new lines of valentine and Easter cards, which will be of surprising elegance.

PEERLESS FILE BOX.

The Peerless Paper Box Company, of Cincinnati, is the manufacturer of a file box which it is claimed possesses many advantages over others now in use. A patent has been obtained, and in favor of the new box it is maintained that it is absolutely dust-proof ; it is strong and durable ; it requires no strings or catches to fasten it, but is self-acting ; it is neat and handsome ; it can be labeled without the aid of mucilage, by means of an improved slide on the front edge of the box lid, which holds a card in place ; it will not bulge open, even when filled to its utmost. Prices and further particulars can be obtained from the Peerless Paper Box Company, northwest corner of Third and Main streets, Cincinnati, Ohio.

To prevent alterations in writing, the following process of preparing paper has been recommended : Add to the sizing 5 per cent. of cyanide of potassium and sulphide of antimony, and run the size paper through a thin solution of sulphate of manganese or copper. Any writing on this paper with ink made from nutgalls and sulphate of iron can neither be removed with acids nor erased mechanically. Any acid will change immediately the writing from black to blue or red. Any alkali will change the paper to brown. Any erasure will remove the layer of color, and the white ground of the paper will be exposed, since the color of the paper is only fixed to the outside of the paper, without penetrating it.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, OCTOBER 19, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THIS issue of THE STATIONER contains the holiday announcements of the trade and is full of suggestion. Read it through carefully. Don't skip a page.

NEW YORK is a great city, and is liberally endowed with hotels which can hold multitudes of guests, but it seems that this year the metropolis is brimful and running over. The great caravansaries which generally are equal to the extremes of demand are, this fall, inadequate to the requirements of the public, and we read in the daily papers that guests are rejected at one house after another because of the inability to provide sleeping accommodations. People can get plenty to eat, but find no place to rest a weary head after getting through with the turmoil of trading and sight-seeing. Of course, they can seek the furnished apartments which are so liberally advertised, but as a rule the boarding-house keeper does not care to entertain transient guests, preferring to take the chance of securing permanent lodgers. The fact that the hotels are turning people away, after filling every available space with cots, naturally induces inquiry into the reasons for this influx of visitors. There is no celebration or civic display to be made, and we look in vain for some extraordinary attraction. We look to business circles for the explanation, and we find it. Commerce induces this surge of humanity and causes the overflow. This betokens prosperity and a generally satisfactory condition of trade throughout the country. Plenteousness and peace are within our borders. The nation has much to be thankful for.

IN one of our correspondent's letters, printed in this issue, reference is made to the success which certain manufacturers have had in introducing and selling their goods in foreign countries through the medium of THE AMERICAN STATIONER. There is nothing surprising to us in this announcement, inasmuch as THE STATIONER circulates regularly in all countries where stationery goods are regularly sold, but the fact which we wish to make most prominent is that there is a demand for our wares outside of our domestic markets. If, without pressing, our manufacturers are able to dispose of their products in foreign markets, how much more could they do if they tried to advance their trade more strenuously? We feel deeply impressed with the importance of seeking a foreign outlet for all of our products, and stationers, no less than others, are interested in thus extending our commerce and thereby helping themselves to realize the benefits which must accrue by steady, persistent application in that direction. We advise all who are willing to seek these benefits to make direct effort to attain them. Secure reliable agents and advertise your goods for export. Make up export lists and invite correspondence. The fruits of such efforts may be realized in days of a lessened demand and diminished trade at home, when works must be kept running, even if profits fall off. Advertise freely and ask for orders from abroad. Diffidence or indifference will not do in these days of enterprise.

CHATTEL MORTGAGES.

THE DUTY ON BOOKS.

A meeting of the Philadelphia Book Trade Association was held in Philadelphia on October 10, for the purpose of agreeing upon suggestions to be made to the Tariff Commission, which is now in session in that city. A paper which had been placed in the hands of the secretary by Mr. Stoddard, to be discussed on its merits by the association, was read. It contained several suggestions relative to the tariff, which were not deemed by the association as exact as a paper by C. C. Febiger, of Henry C. Lea's Son & Co.'s publishing house, the basis of which was presented by H. T. Coates. Mr. Febiger strongly advocated a specific duty of 25 per cent. per pound, which he showed would be the same as 25 per cent. ad valorem, and would also prevent fraud. While it now takes three weeks to get books through the Custom House, it would not require an hour to weigh and deduct for tax. A committee of five was then appointed to consider Mr. Stoddard's paper, and also to examine the paper prepared by Mr. Febiger. The committee consisted of H. F. Coates, J. R. Jones, R. S. Menamin, George R. Fagan and C. C. Febiger. It was resolved that the sentiment of the trade is that a specific duty is better than an ad valorem.

WEALTH OF THE UNITED STATES.—Mr. Mullhall places the value of property in the United States at a round $50,000,000,000, which is considerably in excess of the two next richest countries in the world—England and France. The wealth of England is placed at $44,100,000,000, and that of France at $37,200,000,000, so that the United States are almost $6,000,000,000 worth richer than the former and nearly $13,000,000,000 worth than the latter. In proportion to population England is the wealthiest country of the three, however, the average for every inhabitant there being about $1,300, whereas in the United States it is but $1,000.

OBITUARY.

Henry Miner.

The Pittsburg *Dispatch* reports the death of Henry Miner, of that city, on October 15.

Mr. Miner was in the fifty-third year of his age at the time of his death and had been a resident of Pittsburg all his life. He began his business when he was a boy fifteen years of age by selling books and periodicals on the levee in the days when the river route was the highway to the South and West. He shortly after was given an interest by his mother in her store on Smithfield street. Later he was a member of the firm of Hunt & Miner, then in the Masonic Hall building. In 1858 he went into business alone, opening the finest bookstore in that day west of the Alleghanies, in the Lyon Building, Fifth avenue. He continued there for thirteen years, retiring in July, 1871. In 1860 Mr. Miner began the publication of "Miner's Old Sanford C. Hill Almanac," which publication has appeared annually ever since, meeting with a large sale, especially among the farmers. In 1877, having been out of active life for six years, he opened a book and periodical depot on Smithfield street near Second avenue, where he continued up to the day of his death. He never was married, and leaves as his only near relatives two sisters. His death was the result of a paralytic stroke received about six weeks ago. The funeral took place on Tuesday afternoon from the Second Presbyterian Church, Pittsburg.

Frank Queen.

The editor and proprietor of the New York *Clipper*, Frank Queen, died yesterday of paralysis at his residence in Christian street, Philadelphia, aged sixty-three. Mr. Queen was born in Philadelphia and began life as a printer. He began the publication of the *Clipper* on April 30, 1853. Mr. Queen had been since 1871 a special partner in the wholesale dry-goods firm of John M. Taylor & Co., Philadelphia, but he devoted the greater part of his time to his newspaper. He was at his home in that city nearly every week and took a great interest in Philadelphia affairs. There he was known as a kind-hearted, charitable man, and as a contributor to a large amount to the new Mariners' Bethel at Moyamensing and Washington avenues, as well as to other similar enterprises. He leaves a wife, but no children, and is said to have died possessed of a large estate.

The stores of Richmond, Backus & Co., Detroit, were closed during a part of last week on account of the death of Clara Backus, daughter of F. H. A. Backus of the firm. The young lady was quite a favorite in society, and was accustomed to spend the summer months among the lakes, from which she returned this season with the typhoid fever, dying shortly thereafter. She was about twenty-three years of age, and, it is reported, engaged to be married shortly. The funeral took place on the 13th inst.

For a long period the art of making what is known as Egyptian black pottery has been lost to the world. This black is of a peculiarly beautiful, brilliant appearance, and can hardly fail in a display of art pottery to arrest attention. It is now asserted that the Marland Pottery Works, near Gt. Torrington, Devonshire, England, have rediscovered the art, and at a bazaar recently held in the county they exhibited a vase ornamented with groups of flowers of a bright blue hue, but with a body made of the brilliant black material. It was much admired, and it is said that the body of the vase is the only example in the world at the present day corresponding to the ancient Egyptian black.

A CURIOUS PROBLEM.

A correspondent of *Knowledge* having asked how much space would be required on the earth, on the assumption that, beginning with a single pair, the human race had multiplied during 5,000 years at the rate of 30 children to each pair, sons and daughters being born alternately, and each husband and wife being at the time of marriage respectively 21 and 20 years old—there being also no deaths—the editor replied that the population, taking 30 for each pair at the average age of 40 years, would be 2,199,915, followed by 141 digits, which digits might be represented without appreciable inexactness by ciphers. Now, assuming that ten persons could stand on a surface of one yard square, 30,000,000 could stand on a square mile, and on the entire earth, whose surface is about 200,000,000 square miles, some 6,000 millions of millions. Dividing the number just obtained by this, the result is 3,666,526, followed by 125 ciphers. It would require this inconceivable number of worlds like our own for the population on the assumption made.

Let us see, says Mr. Proctor, how large a single globe would suffice to give standing room to this population, ten to the square yard. Such a globe must have a diameter exceeding the earth's as the cube root of the above quantity exceeds unity, or, roughly, as 7 followed by 43 ciphers exceeds unity. (In reality it will be larger considerably, but this is near enough in such a problem as the present.) Now, the diameter of the orbit of Neptune, roughly, exceeds the earth's diameter nearly 700,000 times. Hence the diameter of the required globe exceeds the diameter of Neptune's orbit more than a hundred billions of billions of billions of times. Supposing the farthest star visible in the great Rosse telescope to lie some thirteen or fourteen millions of times farther from us than the nearest, which lies about 70,000 times farther than Neptune, the distance of that star, 1,000,000,000,000 times farther than Neptune (or a light journey of some 40,000,000 of years), would be but the 100,000,000,000,000,000,000,000,000th part of the radius of such a globe as would be required to hold the population we are considering. A sphere having a radius equal to 100 millions of years of light journey would not suffice even to contain so many human beings.

Coin *v.* Bank Notes.—The relative cost in wear and tear of gold coin, as compared with bank notes, has lately been investigated in England, and the advantage has been found to be largely with the coin. To manufacture a million of sovereigns costs $10,000, or about a cent apiece. If fifteen years they lose in weight one-half of one per cent., or about $25,000, and become too light for further use. This makes the total expense as currency for the fifteen years $35,000. The paper and printing of a million one-pound notes would cost, it is estimated, four cents apiece, or $40,000 at the outset, and during fifteen years they would have to be replaced at least three times, or, with active use, six times, thus requiring an outlay of certainly $160,000, and perhaps $280,000, for the same period that a million of sovereigns would remain in circulation.

Artificial Agate.—A glass which closely resembles natural agate, may be obtained by combining 100 lbs. of sand, 100 lbs. of red lead, 32 lbs. of potash, 22 lbs. of borax, 4-10 of a pound of arsenic, and chloride of gold to the amount of about $5 in value. The gold is to be first dissolved in as small a quantity as possible of aqua regia, diluted with 10 lbs. of water, and intimately mixed with the flux. The melting pot is then placed in the furnace, and the material allowed to melt together for seven or eight hours, when it is to be stirred with a stick, or some potatoes thrown in. The working of the glass can then begin, and a mass is obtained which presents the gray, brown, milk and crystal white shades and marks of natural agate, and a second melting fits it very well for the manufacture of ornamental articles.

Crayons in Vitrifiable Colors.—M. Lacroix, a Parisian chemist, has introduced crayons, similar to the ordinary lead-pencils, the lead being replaced by vitrifiable colors. The colored designs which are executed with these crayons, on slightly roughened glass, bear the heat of a muffle, and are fixed like a painting upon glass; the grays especially give excellent results. A similar process which was tried upon porcelain some years ago was unsuccessful, probably because enameled surfaces were used On biscuit, it is likely that good results might have been obtained.—*Chron. Industr.*

Market Review.

Office of the American Stationer,
Wednesday, October 18, 1882.

THE MONEY MARKET.—The local money market is easy at 4@7 per cent. on call and 6@8 per cent. discount of prime mercantile paper. The drain of currency to the West has nearly ceased, and domestic exchange indicates an early return flow. The stock market continues for the most part under the control of the "bears." There have been feeble attempts at a rally, but with limited exceptions the market has touched a still lower depth of depression. Government bonds are a fraction higher for the 4s and 3½s. Railway mortgages are in close sympathy with the share list. Bankers' sterling is a fraction lower, with which exception the market is unchanged and quiet.

THE PAPER MARKET.—The city dealers continue to report only a moderate amount of business doing, without any improvement in volume. The political campaign was looked forward to as a stimulant to increase the demand for print papers, but there has been some disappointment, as there has been so far very little trade experienced from that source. It may be that buying stock for this purpose is yet to be done, or it may be that this will be an "off year" in politics. Many of the large manufacturers who were troubled during the latter part of the summer by short water are now able to catch up with their back orders; and although there is now a plentiful supply of water and likely to be for some time to come, stocks of paper are not excessive, and, in fact, the demand for print papers is about equal to the supply, especially for news, which is firm in price for immediate delivery. Manillas are not quotably lower, but with the large production, a surplus in the market, and lower prices for jute stocks, there is a tendency to an easing off in prices.

THE STATIONERY MARKET.—There is a continued good active movement in staple goods, with the demand almost altogether through orders from the out-of-town trade, the city dealers sending in very few orders for goods at this time. In a previous issue we noted the fact that some houses in the fancy goods line were running short of goods, and we learn that this is now the case to some extent with some lines of staples, the demand having exceeded the expectations of the dealers. Import orders are being given thus early in the season for valentines and Easter goods, and a very good business is being done in Christmas and New Year cards, with a favorable prospect of a steady enlargement. Some preparation is being made for the holiday trade which ought to start up in another fortnight, by which time a number of large out-of-town buyers for this class of goods are expected in the city on the lookout for selections. There are no new features to prices, and the market is generally firm and steady.

WILSTACH, BALDWIN & CO.,

Nos. 141 and 143 RACE STREET, CINCINNATI, Ohio,

— MANUFACTURERS AND WHOLESALE DEALERS IN —

STATIONERY

Are now prepared to show the Trade throughout the West and Southwest a very large and well selected stock of goods suitable for

Holiday and Winter Sales,

— INCLUDING MANY NOVELTIES IN —

STATIONERS' FANCY GOODS,

— And their usual very complete assortment of —

STAPLE STATIONERY, BLANK BOOKS, WRITING PAPERS, ENVELOPES, &c.

Our representatives on the road will carry full lines of samples, and will notify our customers of the dates at which they will call upon them. Dealers visiting Cincinnati are invited to call and inspect our stock and compare our prices with those of any other market. ☞ Mail orders are solicited and will receive our best attention.

JOHN McADAMS' SONS,

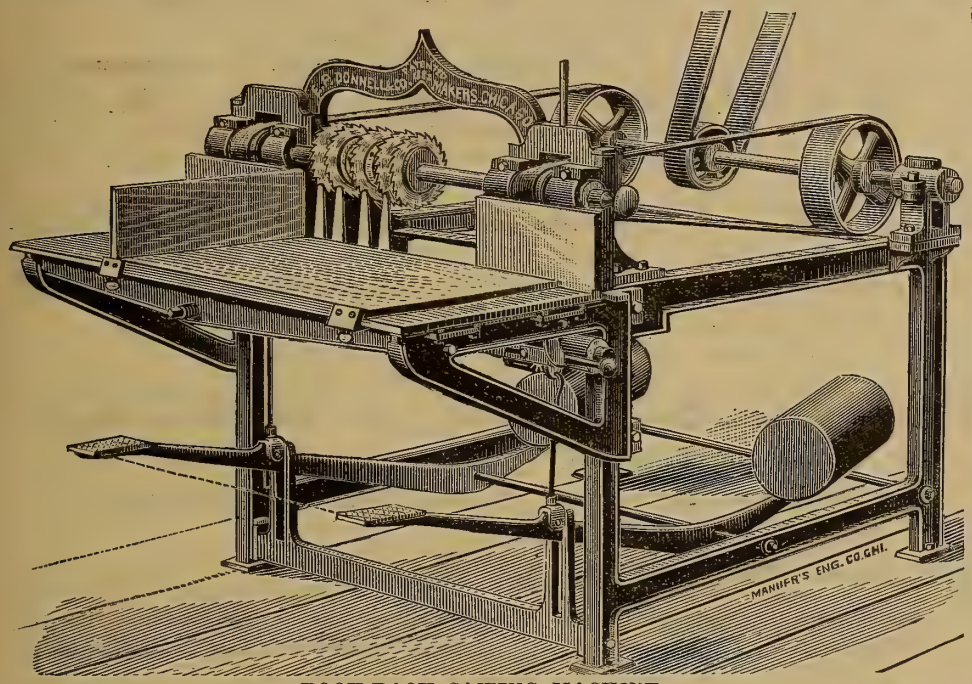
— MANUFACTURERS OF —

Double and Quadruple Ruling Machines,

— ALSO, —

PAGING, LETTER-BOOK PAGING, STRIKERS, EXTENSIONS, ELECTION TICKET FOLDING and GUARD FOLDING MACHINES, &c.

These Machines are the most rapid and by far the best Machines made for these purposes. Special efforts are made to make them last. They are used by all the leading manufacturers. For Catalogues, Prices, &c., address



JOHN McADAMS' SONS,

528 Kent Ave., Brooklyn, N. Y., U. S. A.

— MANUFACTURERS OF —

Improved Tools and Machinery,

BOOK-BACK SAWING MACHINE.

FOR

BOOKBINDERS

— AND —

Paper Box Makers.

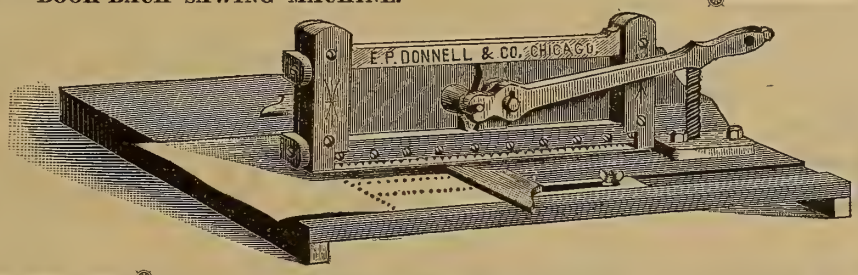
WAREROOMS,

182 Monroe Street, Chicago.

FACTORY,

Nos. 196 to 204 CLARK STREET.

The arbor on which the saws run can be separated into two parts, so as to saw for the parchment, kettle stitch, &c., or it can be locked and run as one.



THE MOST PERFECT SAWING MACHINE MADE.

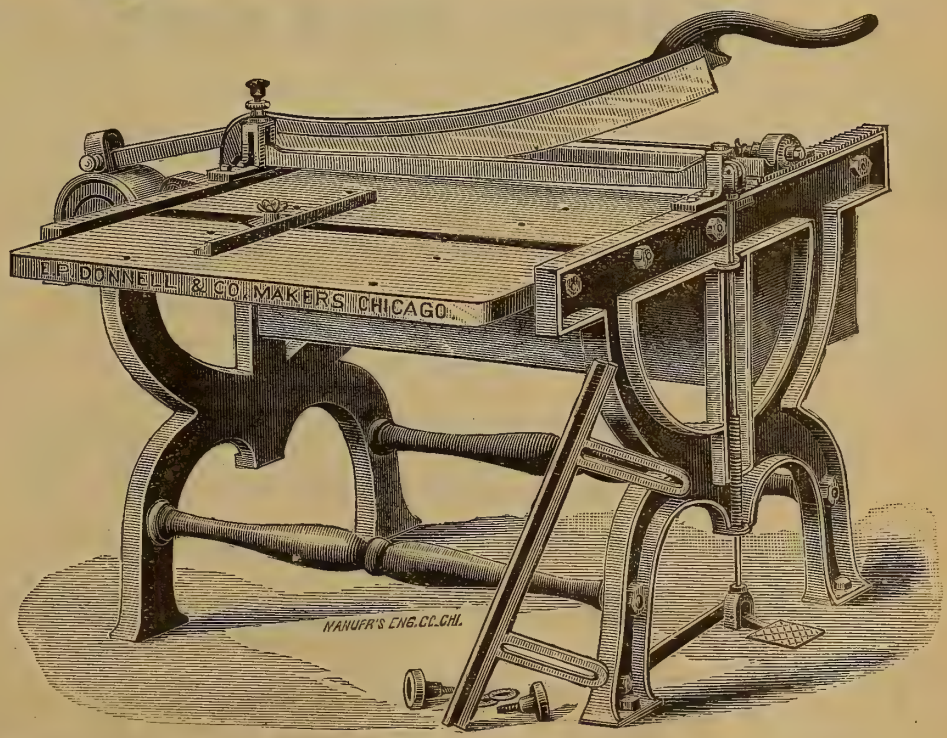
A PERFECT

PERFORATOR

—FOR—

$35.00.

Makes clean perforations, and will take in any size of sheet.



Power by hand or foot.

IMPROVED ALL-IRON EXTRA HEAVY TABLE SHEARS.

Cut 34 inches. Will cut heaviest kind of Board. Accurate Geared Gauge. Always true.

ON THIS MACHINE YOU CAN GET A PERFECT SQUARE.

Send for prices of these and other improved Machines to the Manufacturers,

E. P. DONNELL & CO., Chicago, Ill.

MARCUS WARD & CO'S CALENDARS, 1883.

The Shaksperean Calendar.—Suitable for Library and Boudoir. A leaf to be torn every day from the block tablet. With an appropriate quotation from Shakspeare. The ornamental mount represents a scene from "Macbeth." **Price 50 cents.**

The Calendar of the Seasons.—An exquisite work of art, with four designs of figure subjects, drawn by Kate Greenaway, and reproduced in the highest style of chromo-lithography. Eight pages, containing all the usual calendar information. **Price 15 cents.**

"Day unto Day."—A Sacred Calendar, same style as the Shaksperean Calendar, with a suitable quotation from the Bible, and with emblematic mount. **Price 50 cents.**

"Every Day."—A Calendar for Home and Office use. The quotations are from standard writers of all ages, and have been selected with a view to our everyday life. **Price 50 cents.**

"The Garland of Good Wishes."—Produced in the highest style of chromo-lithography, containing pictures emblematic of the seasons, a dedicatory sonnet, the year's almanac, postal and other information. **Price 50 cents.**

MARCUS WARD & CO.'S Superb Holiday Book, "ABROAD,"

Is now ready for delivery.

A Companion Book to "AT HOME," and Illustrated in the very best style. **Price $2.50. "AT HOME," $2.00.**

MARCUS WARD & CO.'S

CHRISTMAS AND NEW YEAR CARDS.

A large and varied assortment now arriving and ready for delivery.

LONDON, BELFAST, and No. 734 Broadway, NEW YORK.

Ph. Hake's New Goods.

1882—SEASON—1883.

I HAVE now ready for inspection the most elegant line of NOVELTIES ever offered to the trade. The styles and designs will be unique and novel. Holiday Boxes and Papeteries must be seen to be appreciated.

I have recently refitted my Show Rooms, and parties visiting the City will please call and examine

HAKE'S PROGRAMME CARDS.

PH. HAKE, MANUFACTURER OF FINE STATIONERY,

64, 66 and 68 Ann Street, and 115 William Street, New York.

BUFFORDS' LINE.

J. H. Bufford's Sons have made wonderful progress during the last few years in building up an extensive and influential trade. This is no doubt attributable to the exertions of Frank G. Bufford, who has been indefatigable in his efforts to attain this result, and to the elegant lines of goods which the firm has introduced, and which show great inventive power, as well as taste. The house now has agents in Europe, Australia, and South America, and ships goods constantly to England, Germany, Mexico, and the Brazils. It is said that in 1862 this firm was the first to introduce advertising cards, and it has been improving them ever since. Every week it brings out several new series. Among its latest productions are bristle folders, with pictures of fowl; translucent folders with animals, animals' heads and children's ideal heads; cottage chromos in great variety, the designs mostly representing hunting scenes, marine views and landscapes, in which latter children and the smaller animals are largely introduced. There is also a new line of crayons, copied from ideal drawings of the old masters. The firm is bringing out a new line of plaques, which are far handsomer and richer than any of its previous productions in this line, and which come in small round shapes and in large oval ones. The firm is also handling a rare line of porcelain plaques. "Shape" goods are being introduced in great variety and in original designs, new machinery having been specially secured for this purpose. In New Year calling cards the firm shows over two hundred designs. A large and rare line of valentines is shown; it includes both imported specimens and those of the firm's manufacture. One design of a palm-leaf, richly embellished with embossed flowers, is very striking. In Christmas and Easter cards over two hundred series are exhibited, and some of the designs are among the richest ever offered; one showing a dove between two leaves that open and close is very beautiful. The variety of birthday cards is almost endless. Orders of dance and menus come bevel-edged, plain, and fringed, and in floral and figure designs. Some are brought out in shapes befiting certain festive occasions, such as those given by military, firemen, boat clubs, &c. The line of visiting cards is large, and most of the series are very pretty. Among other things shown are fashion publications in folders and cards, suitable for clothiers' purposes; diplomas for societies and schools; miniature tambourines, with heads in satin or paper, and rims in wood or paper; shingles, panels, Sunday school and day school reward cards, marriage certificates in beautiful designs, a line of colored blanks for show-cards, easels, tassels for embellishing orders of dance and programmes, and a line of calenders, which are neatly gotten up. The firm has in course of preparation several series of Christmas advertising cards. It may be here mentioned that this firm takes special pains when fringing its stock, to adapt the color of the fringe to the tone of the card.

In former issues, an illustrated cut of the Pickwick toilet paper, manufactured and sold by the C. C. White Paper Company, 151 Chambers street, showed it to be in book form, with ribbon loop to suspend it by. They have now improved it, as also their White's toilet tablet, which is also in book form, open end, by using a strong bent hook. These brands, together with the Pickwick pocket edition, pamphlet form, are now very attractive and popular, meeting with large sales for home and export trade.

WELCH'S PATENT INDEX TAB.

Welch's Patent Index Tab is a specialty which is likely to have a good sale, not only among bookbinders and makers of blank books, but among stationers for the use of their customers in counting houses and general stores. It is a simple and durable index tab made of leather with metal letters, and can easily be added to any book by any one having a pot of paste and a half hour of leisure. The tab is simply a properly shaped piece of leather, leaving the metallic letter in front, and as it is doubled on itself, the leaf to be indexed may be slipped between the two surfaces and glued, thus making a perfect index in plain view, without cutting the book, the tab serving at the same time as a "grasp" in turning the pages. The device is so simple that it is remarkable that no one thought of it before; while the metallic letters make it so durable that it is surprising that the old, easily obliterated gilt letters were ever tolerated. The tab is made by George D. Barnard & Co., St. Louis, Mo., who, on application, will send a circular showing specimens of the tab with the manner of placing it in a book, together with a schedule showing the proper number of leaves to be appropriated to each letter, in books of thirty leaves upward. The tabs are furnished in boxes, each containing one set, of which from one to five dozen can be sent in a single package by mail.

G. W. Shepard, the well-known head of the firm of George W. Shepard & Co., manufacturers of scrap and invoice books, Troy, N. Y., "got left" the other day. This, however, was not in a business way. While at Youngstown, Ohio, on his return from a Western trip, he was waiting for a cup of coffee to cool and his train started without him. He chartered an engine and caught up at Ashtabula, after a rapid run of seven miles.

"Monaco" is a new game, manufactured by the Monaco Company, and for which the American News Company is sole agent. It consists of a board and set of men who move according to the rules of the game, which in themselves are simple enough, but, practically worked, reveal unexpected strength in the amusement. The game is likely to become a favorite with old and young heads.

Our influence is measured and expressed by our example. We can lead others no farther than we can go ourselves.

FOR SALE.

A well established store, doing a first-class commercial trade; located in the most central business part of a large New England City. Stock all new and in good condition; an excellent opportunity.
Address R. D. C., Stationer.

BOOK AND STATIONERY STORE FOR SALE, with privilege of buying Printing Office and Book Bindery if desired. In a city of 12,000 inhabitants. Stock invoices at about $5000. Good stand and best trade in the place. Address LOCK BOX 113 P. O., Madison, Ind.

FOR SALE—THE ONLY EXCLUSIVE BOOK and Stationery Store in a town of 7,000 in Northern Indiana. Good paying trade established. Satisfactory reasons for selling. Address BOOKSELLER, care S. A. Maxwell & Co., Chicago, Ill.

SALESMAN WANTED—IN THE RETAIL stationery and blank book business; one fully acquainted with city trade. Address STATIONER, P. O. Box 1151, New York.

TRAVELING SALESMAN WANTED.—A young man, of experience in the book and stationery business as traveler. The right man can get a good position. Address, giving record and references, S. W. C., care AMERICAN STATIONER.

TWO WORKS
OF
Great Value
TO
STATIONERS.

The Stationers' Price Book and Illustrated and Descriptive Catalogue, . . $2.00

Lockwood's Directory of the Paper Trade, . . . $2.00

EVERY STATIONER wants the above Works for the

FOLLOWING REASONS:

The **Price Book and Catalogue** furnishes Stationers information which, if they have at all, is usually scattered and never right at hand when wanted. As a book of immediate reference it will be found invaluable.

The **Directory** of Paper Manufacturers and Jobbers is a guide to **First Hands** in the Paper Trade. Any one who uses it intelligently can save many times its cost at once.

THE PRICE BOOK is deliverable in the cities of New York, Boston, Philadelphia, Chicago, Detroit and St. Louis, where purchasers can have it packed with any goods they may be buying.

THE DIRECTORY is sent post-paid.

All Stationers who wish to keep **ABREAST WITH THE TIMES**, must own these two books.

THE RAISBECK ELECTROTYPE CO.,
Electrotypers & Stereotypers,
☞ *Electrotypes Mounted on Wood or Metal.*
No. 68 BEEKMAN STREET.

MARCUS WARD & CO.

Marcus Ward & Co.'s two companion books "At Home" and "Abroad" are said to be meeting with a great demand. This is to be expected as the books are interesting and handsome, while the illustrations are rich. "Abroad" has been designed by Thomas Crane and Ellen Houghton, and is an entirely original series of pictures in colors, representing a trip from London to Paris, and through Normandy, made by English children; and all the interesting sights they saw, with descriptive verses by various writers. Every page has been specially designed for this work, which is as truly novel in the decoration and treatment of color, as in idea. It is entirely within the comprehension of children, while as a work of art, it will be admired alike by amateurs and artists. "At Home" has been designed by Thos. Crane and J. G. Sowerby. It is a series of home pictures in colors, representing childhood of the present day, in the new aspect which the revival of taste in costume, color, furniture and decoration has given to our homes. The children are charming in themselves, and their quaint, artistic costumes quite delightful. The decoration of the book is entirely novel and harmonious, and valuably suggestive of application to household art in these days of amateur decoration. This house shows an elegant line of Xmas, New Year and birthday cards, which comprises nearly three hundred designs, all of which are rich and most of them new. In the New Year's selection is one series which deserves special mention. It consists of four designs, each representing a midnight scene. No. 1 shows a figure indicative of the New Year knocking at a window of a mansion, while another figure, representing the Old Year, emerges from a window above. No. 2 is somewhat similar, but with the locations of the figures changed. No. 3 portrays the New Year figure as opening the door of an old-fashioned clock, while that illustrating the Old Year steals gently off to bed. No. 4 shows children looking at the ghosts of their ancestors, which, in a certain legend, are said to appear on such occasions.

BENZINE CANDLE.

The benzine candle is formed by an iron pipe containing the benzine. The wick is inclosed in a tube which reaches nearly to the bottom of the candle, so that when the latter is upset the benzine is contained in the space between this tube and the candle shell, and cannot run out through the wick tube; the candle ought, however, to this end, not to be filled full, but rather less than half full. If this is done the candle will burn quite in the same manner in any position between a vertical and horizontal one. There is no dripping, as with stearine or tallow candles, in slanting positions, which are often required, as in sealing with sealing wax, examining floors, &c. The end of the wick is made of asbestos, and, consequently, does not become consumed. The products of combustion are free from smell, and no more noxious than those of stearine candles.

The danger of explosion is entirely obviated in any position of the candle by the circumstance that no communication exists between the flame and the space above the liquid, as in most lamps, the admission of air required for maintaining the equilibrium between the outside and inside pressure taking place through a small internal tube, which is fastened in the false bottom of the shell, and communicates, through a hole in the bottom end, with the atmosphere. Any vapor generated in the candle also finds its outlet through this, if the pressure should rise above the atmospheric pressure at a safe distance from the flame. A small cap, suspended by a chain, serves to extinguish the light and hermetically to close the aperture. The wick and flame can be regulated from ordinary stearine candle size to the smallest night-light.

At the former size, the quantity of benzine burned in five hours costs about a half-penny. The candle can be put into an ordinary candlestick, but is also supplied simply screwed upon a flat dish. The manufacturers also make walking-sticks fitted with such candles, for the use of pedestrian tourists and others. These are accompanied by a small lantern, which can be folded together and carried in the waistcoat pocket, weighing only two and a half ounces, and opening out by one pressure, after which it can be attached to the stick. No doubt such a stick will be a useful companion to the belated pedestrian on a dark night.—*Mechanical News.*

WATERPROOF PACKING PAPER.

The Russian oil-casks are often coated without with a paper which has a gelatinous oil-proof surface. It is brushed over with a mixture of lime and blood, which is much used in Russia and China, and is impervious both to oil and water. It is prepared as follows: To three parts of fresh blood, previously beaten to remove the strings (fibrine), are added four parts of lime slaked with just sufficient water to fall to a fine powder and a little alum. This forms a thin adhesive paste, which is used at once, being applied in one, two or three layers as may be required. Even baskets woven of straw may be made quite fit for the conveyance of oil. Pasteboard boxes, lids, &c., thus prepared have the appearance and the firmness of wood.—*Leipziger Muster Zeitung.*

POSTAGE STAMP FRAUDS.—The principal losses to the government appear to be, in brief, from the following causes: 1. Stamps are not canceled, or are so slightly defaced that they readily pass into second use and escape detection. 2. Canceled stamps are removed from the letters, the canceling ink washed off, the stamps regummed and sold for re-use. 3. Uncanceled stamps are removed by rogues in the post-offices, and old canceled stamps substituted. This probably is the way that a large loss is occasioned. It would seem that the inventor who can make a really serviceable postage-stamp that can be readily applied to an envelope, but which cannot be removed without the total obliteration of the stamp, will have produced a valuable improvement. By a serviceable postage stamp is meant one that will bear reasonable handling without injury, that has no poisonous qualities, that is easily applied, and that cannot be removed intact after it is once put on the letter.

Metals, and especially steel, brought to a cherry-red heat and strongly compressed, the pressure being continued until the mass is perfectly cold, are said to acquire an excessive hardness and a striking fineness of grain. Steel thus treated acquires a coercitive force, which enables it to become magnetic. The durability of this property requires to be studied.

There is deep significance in silence. Were a man forced for a length of time but to hold his peace, it were in most cases an incalculable benefit to his insight. Thought works in silence, so does virtue. What folly would one avoid did the tongue be quiet till the mind had finished and was calling for utterance.

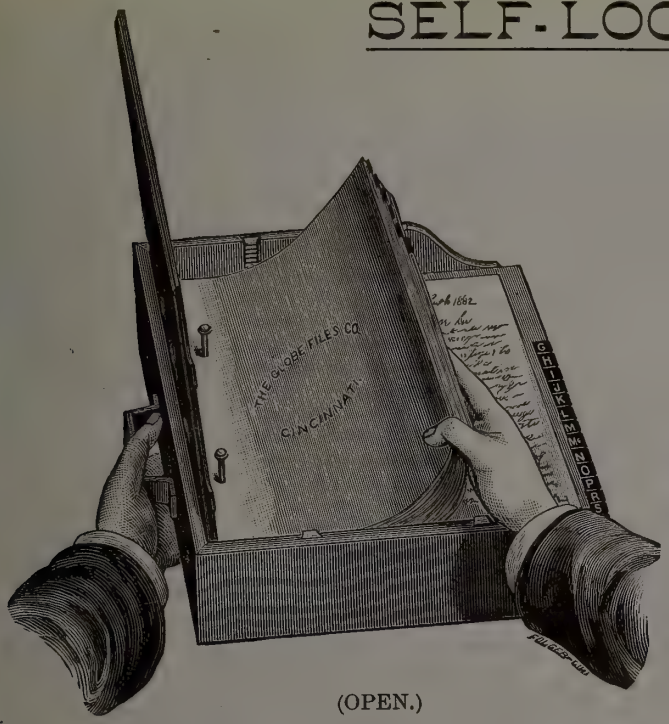
ANTIQUITY OF PORCELAIN.

Kaolin, a natural hydrated silicate of alumina, is absolutely refractory and opaque; it constitutes the resistant part of porcelain. Feldspar are silicates of alumina and potassa, fusible at a very high temperature into a beautiful transparent glass. If, now, we mix a quantity of feldspar with kaolin, cover the mixture with a layer of feldspar, and heat the whole at a very high temperature, the feldspar will melt and communicate to the opaque clay a clearness greater or less according to the quantity of it present, and to the superficial part of it that beautiful glaze with which all are familiar. A part of the action in this process is chemical, and consists in the production of new crystalline silicate formed by a combination of all the substances present.

The discovery of porcelain in China is traced back to high antiquity. The Chinese have certainly made it regularly for at least a thousand years; many authors fix the discovery at fifteen hundred or eighteen hundred years ago, but no evidence exists to justify our going farther back than a thousand years. The first pieces that came to Europe were probably brought by the Venetians at the end of the thirteenth century. Charles VII., king of France, received a present of Chinese porcelains about the middle of the fifteenth century, from the Sultan of Babylon; but it was not till the sixteenth century that the importation of these Oriental products by Portuguese and Dutch merchants assumed a real importance.

The discovery of tender porcelain was made in France toward the end of the seventeenth century, but whether by Louis Poterat or by Reverend, at Paris or Rouen is disputed. This ware has no relation with real porcelain; it contains neither kaolin nor feldspar, but is an artificial product, a kind of glass made from a mixture composed essentially of sand, lime, potash, soda, and a small quantity of marine marl. This mixture, made plastic by the addition of manganese or other fluxes, is baked without glazing, and is covered after baking with a glazing composed of silica, lead, potash and soda. The beauty of the material, its perfect glaze, and the facility with which vitrifiable colors are fixed in it, make of tender porcelain a ware exceptionally adapted to decoration.

NATURAL RED SILK.



M. Ruimet des Taillis, writing in the *Chronique de la Société d'Acclimatation*, states that, by feeding silkworms on vine leaves, he has obtained cocoons of a magnificent red, and by employing lettuce, others of a deep emerald green. M. Delidon de Saint Gilles, of Vendée, has obtained silk of a beautiful yellow, other samples of a fine green, and others again of a violet, by feeding the silkworms on lettuce or on white nettle. He points out that the silkworms must be fed on mulberry leaves when young, and supplied with the vine, lettuce or nettle leaves during the last twenty days of the larva-stage of their life.

Rubber packing may be made steam and air tight by being brushed over with a solution of powdered resin in ten times its weight of strong water of ammonia. At first this solution is a viscid, sticky mass, which, however, after three or four weeks becomes thinner and fit for use. The liquid sticks easily to rubber, as well as to wood and metal. It hardens as soon as the ammonia evaporates, and becomes perfectly impervious to liquids.

CRYSTALLINE GLASS.

If plate glass is painted over with any water-color and then exposed to cold, so that the water freezes, it will, of course, form ice crystals. If slowly dried at a moderate temperature, they do not disappear; and the structure retains the ice-like forms. If the pigment used is one of the fusible oxides used in coloring glass, no matter what its color, the crystalline structure can be fixed on the glass by burning it in.

Many salts act in a similar manner when their solutions are mixed with the glass pigments, and form different figures, according to their manner of crystallizing. Aside from their decorative effects for table tops, frames, &c., which produce a fine appearance when gilded or silvered, the crystalline forms fixed by burning in these fusible pigments would form interesting collections, and serve as helps in scientific lectures.

By the use of hydrofluoric acid (the acid from fluorspar), says J. B. Miller, in a German publication, very beautiful crystalline forms may be produced, which are very similar to the ice pictures on our windows in winter.

According to E. Siegwart, of Schweizerhall, near Basle, strontianite (carbonate of strontia) is dissolved in hydrochloric acid, diluted with an equal volume of water as long as it dissolves any, and then evaporated to a pasty consistency. When this cold substance, chloride of strontium, is dissolved in alcohol, by stirring, and the clear, filtered liquid poured upon a well-cleaned plate of glass, which is left lying in a horizontal position until the crystallization is completed, it will, as already stated, form very pretty shapes, which are deceptively similar to ice-flowers, but wash or rub off easily from the glass. In order to fix them, they are exposed to the vapors of hydrofluoric acid. Whenever this comes into contact with the chloride of strontium it forms fluoride of strontium, which protects the spots where the glass is covered with it, and hence acts as an etching ground. The unprotected portions of the glass are rendered matted by the vapors of the acid.

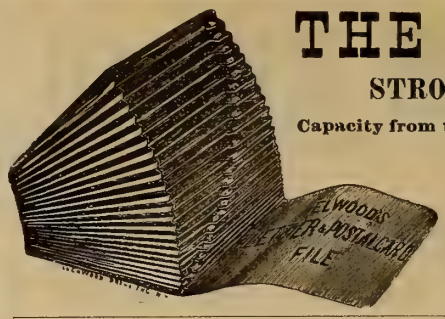
To protect the reverse side of the glass from being attacked, it must be protected by a greasy substance able to resist the action of the hydrofluoric acid, a thickened varnish being the best for the purpose. An even layer of it should be spread over the back of the glass and allowed to dry before the chloride of strontium solution is poured on the right side of it.

The etching with hydrofluoric acid must be performed with proper precaution. It is, however, perfectly harmless, and scarcely disagreeable if done in the following manner, which I will describe somewhat in detail, for in recent times this means of engraving is often employed, sometimes for ornamentation, sometimes for printing from, and, so far as I know, there are no satisfactory directions in existence.

The etching is done in a box closed all around, which is best made as follows: Six boards of dry wood well fitted together are made into a box, which is thirty-two inches high, twenty-eight inches deep, and twenty-two inches wide, inside measurement. Around it, let into the wood, are slats fastened with wooden pegs, so as to form a rectangle within, with the broad surfaces outward, so that when the boards are slid in through the groove they form and make a box of that size. Two angle irons are screwed to each side, toward the front of the box, to receive a rod to fasten the front boards that form a door.

All the wooden wall, as well as the boards that slide, is to be protected against the action

of the hydrofluoric acid by repeatedly warming and impregnating thoroughly with tar. It can be easily lined with sheet-lead one-twenty-fifth of an inch thick. The sides of the box will be previously roughened with pumice, and the lead glued on.



All the parts are smooth except the roof, which rises a little in the middle, sloping toward the sides. In putting it together the joints between the boards, are smeared with soft cement of red lead, and separate portions fastened together with wood screws that go all the way into the wood. The front is left open, and is not closed till after the plates of glass are put in, when it is closed with these boards, which are also cemented on the edges. By putting in wedges behind the rods these boards can be wedged up against the cleats so as to close it hermetically.

A leaden dish just as large as the bottom of the box, and one and a half inches deep, can be made from a sheet of lead, and is cemented to the sides of the box so that it will catch the acid that condenses and runs down the side of the box, and the dish is therefore filled to the depth of one-quarter or one-half inch with distilled water. On one side, and just above the dish, the tube from the gas generator enters, and extends to the middle of the box. Near the top of the box is another lead pipe that leads to a chimney with a good draught. Both sides must fit air-tight, and be cemented besides.

A wooden support about six inches high also saturated with tar, is provided with two cross-sticks, in which are V-shaped cuts about an inch apart to receive the plates of glass. Such a box will hold thirty plates of glass, twenty to twenty-four inches in size, which rest in these cuts below, and are held perfectly vertical by means of blocks of wood an inch thick at the top. The gas generator stands by the side of the box, and consists of a pear-shaped leaden retort, or a leaden bottle cut down, and provided with a funnel-shaped cap well fitted and cemented on, its prolongation acting as delivery pipe. All cracks and chinks must be carefully greased and covered with a piece of bladder. The delivery tube must be cooled as much as possible. If it can be laid in a trough of cold water, that is preferable to covering it with wet cloths. It is always well to have rye paste ready to stop up any spot where the gas escapes without delay.

After the box has been filled with glass plates to be etched, and closed, the gas generator is filled half full of a pasty mixture, consisting of one part of pure finely-pulverized fluorspar, and three parts of concentrated sulphuric acid. The gas is evolved by the application of a gentle heat, preferably that of a water bath, in which the retort is suspended, and which is kept quietly boiling.

As soon as the vapors of hydrofluoric acid begin to be given off, the etching commences, and in ten or fifteen minutes is completed. The fire is then withdrawn and cold water poured over the retort, and this continued until it is perfectly cold. The retort is then thrown into a vessel full of cold water, whereby it is rendered harmless. The vapors in the box are expelled by blowing air in with a bellows. The glass may then be removed, but the hands must be protected by rubbing grease over them or with india-rubber gloves. The acid that accumulates in the leaden box can be preserved in a gutta-percha bottle. The plates of glass are dipped in a tub of water; then the ground varnish on the back is softened with warm petroleum, and rubbed off with dry bran, and then the whole glass is washed with warm lye and rinsed in warm water.—*Crockery and Glass Journal.*

"ABROAD."

Owing to the great success of **"At Home"** last season, we have this year issued the **New Art Gift Book—"ABROAD"** —for the Holidays; to be of uniform size and a companion piece of **"At Home."**

"Abroad" far surpasses its companion both in **Decoration and Illustration.** Each page being a study in itself. The quaint little English Children are in this Book represented on a tour of pleasure through France. Those who have been "Abroad" cannot fail to recognize the beautifully executed drawings of places of interest. The appropriate verses accompanying each illustration make this work a handsome memento and Holiday Gift. Decorated by THOS. CRANE. Illustrated by ELLEN HOUGHTEN.

Price, $2.50. "AT HOME" published this year at **$2.00.**

MACKINNON PEN COMPANY,

MANUFACTURERS OF

The Mackinnon Iridium Pointed Fountain Pens.

Patented July 21, 1876; reissued July 15, 1879; Patented January 21, 1879, July 29, 1879.

AND THE

AMERICAN STYLOGRAPHIC PENS,

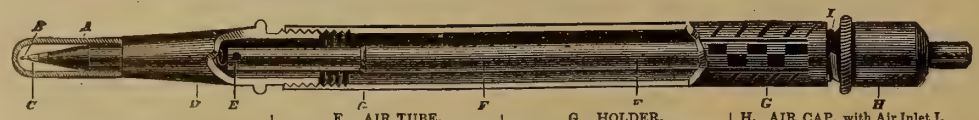
Patented July 21, 1876; reissued July 15, 1879, July 29, 1879, March 23, 1880, August 31, 1880.

OFFICE, No. 192 BROADWAY (corner John Street), NEW YORK, U. S. A.

PRICE LIST:

Short, plain,	$4.00	Long, plain,	$4.50	Plain Pocket,	$4.50
" mounted,	4.50	" mounted,	5.00	Mounted Pocket,	5.00

THE MACKINNON PEN is a practical Fountain Pen, and is made of the best and most durable materials, a conical tube of gold, tipped with a circle or bored grain of IRIDIUM, makes the writing point. (The valve needle which rests more lightly on the paper when writing, is also tipped with Iridium.)



AMERICAN STYLOGRAPHIC PENS.

Short, plain,	$2.00	Long, plain,	$2.50
" mounted,	2.50	" mounted,	3.00

These Pens are in every respect, except the Iridium Points, as well made as the Mackinnon Pens.

PATENT IMPROVED NEEDLE-ADJUSTING AND CLEARING DEVICE.

The Needle can be adjusted to suit any hand.

A. POINT COVER.
B. VALVE NEEDLE.
C. IRIDIUM WRITING POINT.
D. VALVE CHAMBER.
E. AIR OUTLET.

F. AIR TUBE. Which supplies air to take place of Ink used. This must be kept free from Ink. Blowing through from top will sometimes start Pen if it stops.

G. HOLDER. Containing Ink, which is filled at joint, with Valve Chamber D, shown partly open. Any good Ink may be used. Wash out if it clogs.

H. AIR CAP, with Air Inlet I. This must be opened before taking off Point Cover, or unscrewing Ink Joint. Kept open when in use, except only when washing or shaking.

The Needle can be made to clear itself of dirt, &c

The MACKINNON PEN COMPANY claim that all other Stylographic Pens are infringements of their Patents. No claim is made that the Company infringes the rights of others.

THE GRAVITY SCALE.

Fulton's Gravity scale is a radical departure from the common form, and is probably the simplest and most convenient office scale ever presented to the public. It weighs quickly and accurately, and requires only a glance at the graduation on the dial to determine at once the amount of postage required. These advantages are gained by dispensing with the use of springs, weights or slides, which not only effects a saving of time, but makes the scale light, compact, and readily comprehended. The workmanship is superior in every respect, securing both durability and elegance. In addition to numerous testimonials from prominent postmasters, the company (the Fulton Gravity Scale Company, 161 Central avenue, Cincinnati, Ohio), has just received the first premium at the Cincinnati Industrial Exposition. The attention of readers of THE STATIONER is invited to an advertisement on another page. Orders for these popular scales may be sent to the leading stationers everywhere, or to the manufacturer's authorized agents in New York, Boston, and Philadelphia.

REPLATING WITH SILVER.

It is our intention in the following hints to afford such assistance to those who may desire to replate articles from which the original deposit has been worn as may enable them to accomplish their desire with more or less success. We would, however, warn them that the difficulties of the process are considerable, and that the utmost care and cleanliness must be observed if they would obtain a passable result. We will suppose that the articles selected to be operated on are spoons or forks, but it will be understood that our instructions apply to other objects.

Almost any person can deposit silver on a few trinkets and cause them to present a silvery appearance with the current from the smallest and most inconstant battery, but the work now before us demands more skill and attention, and special preparation to insure success in the operation. Before we attempt the preparation of the articles we must be sure that we have enough solution to cover them when hung from the cathode rod; the depth of the vat should be sufficient to receive a tablespoon standing on end, with not less than 3 m. of solution above it. The solution should contain silver in it of a not less proportion than two ounces to the gallon, and should hold enough free cyanide in the solution to dissolve the anode freely and cleanly. The anode should be of pure sheet silver, not less than one-sixteenth of an inch in thickness, and a superficial surface not less than that of the article to be plated. When impure anodes are employed the solution becomes impaired in quality, and ultimately the deposit of silver becomes hard and of a pewetry appearance. The solution, vat, and anode having been arranged in order, we must next turn our attention to the battery. As the action of the current must be steadily maintained for several hours at a time, it is necessary that we employ a battery giving a constant current of large volume for a period of not less than four hours' duration. The types of constant batteries best known are those named respectively after their inventors, Bunsen, Daniell, Smee and Fuller, and we shall do well to discuss for a few minutes their value to us in this work. The Bunsen is a cell of small internal resistance and large plate surface, and forms one of the best and most powerful batteries, but the noxious and even injurious fumes given off in working render its use objectionable. The Smee and its relative the Walker are both good cells, and much good silvering has been and is done with them. The plates should exceed in size the anode plate, and the zinc should be well amalgamated. The positive element in the Fuller constant cell is much too small to insure such a full current as we require, but if this is replaced by two plates of amalgated zinc in the porous cells and the bichromate solution is fresh, some good silvering may be done with it. We have not tried Mr. Urquhart's improved bichromate battery, but think that it might be used for this purpose with every chance of success. But the quart size (Daniel) has been proved by us to be the best and most constant for this class of work when modified as follows: Discard the ordinary porous pot and zinc rod and substitute a larger porous cell—in fact, one as large as can be conveniently used without touching the copper cylinder; prepare two amalgamated zinc plates to go in each porous cell, and clamp them to a wood frame as used in the Smee cell. When thus prepared they can be supported by the frame on the top of the cell, and can be raised or lowered to suit the volume of current required. Two cells thus made up will furnish power enough to plate such articles as spoons, forks and cruets.

We will now turn our attention to the articles to be plated. If these are spoons from which the silver has been worn, it is probable that they are also somewhat battered, bent and scratched. Now, if we attempt to coat them with silver while in this condition, the coat of silver will bear all the imperfections enumerated above in an exaggerated degree. If the points of the bowels are worn thin we must file off the sharp edges, and by making the bowl a little smaller reduce it to a presentable shape and condition; if the shank is bent it must be brought to a proper curve. Scratches must first be scraped out with a sharp chisel or a similar steel instrument, and then rubbed down with water of Ayr stone, and the spoons thus roughly put into proper condition. But the old silver still remains upon them, and if left there would cause the deposit to be patchy. We must therefore get the old silver off. To do this, heat some oil of vitriol in a shallow evaporating dish, or one of enameled iron, and when hot gently introduce one spoon at a time, hung on a bit of copper wire, move it to and fro and drop in a few crystals of saltpetre. In a short time the silver will dissolve off without attacking the metal of which the spoon is made unless exposed too long to the action of the acid. Great care must be exercised in this operation, for if the hot acid is spilled on the skin it will cause painful scalds, and when spilled on clothes entirely ruins them. When the silver has been all dissolved off, rinse the spoon in water, dry it, and then polish it to as nearly resemble a new spoon as can be attained. Forks and liquor labels are to be similarly treated, and it should be known that the operations of burnishing and polishing the deposited silver are facilitated by the finish given to the articles before plating them. The last operation will have left some greasy marks on the articles from our fingers, and these must be got off by swilling the articles in a boiling hot solution of caustic soda or caustic potash, and rinsing them in water. They are to be next dipped for a few seconds in a solution of protonitrate of mercury in distilled water, or until they are lightly coated with a mere film of quicksilver in every part, then rinse them in water, and hold them in a piece of clean cotton or linen rag while attaching the slinging wires. If dull patches of mercury appear on the surface rub them with the rag until the surface presents a uniform bright appearance; then put them at once in the plating bath, and hang them to the cathode rod by slinging wires, with the tops of the articles about one inch below the surface of the solution.

The operation of coating with mercury preparatory to plating the articles with silver is called "quicking," and articles are quicked to insure adherence between the coat of silver and the surface of the article. The solution for "quicking" may be prepared by dissolving some mercury in a mixture of one part nitric acid to three parts in volume of distilled water. This may take several days, for the operation is a slow one, but it must not be hurried by heat or the addition of more acid, and when completed the mixture must be diluted with distilled water in the proportion of one gallon of water to each ounce of mercury in solution.

When the articles have been exposed to current in the plating bath for a quarter of an hour, it will be advisable to remove them and test the adherence of the deposit with a scratch-brush in clean water. Brush them briskly all over until the creamy appearance has been removed and bright silver takes its place. If the silver strips off from any part remove all the loose silver, and dip the article again in the quicking solution, following it with the same precautions as before, and return the article to the plating bath. A good wearable coat of silver may be deposited in three or four hours, and during this time both the articles and the anode should be frequently moved to avoid stratification of the liquid, and consequent streaks on the silver. The anode may have a slight grayish appearance, but the articles must be of a creamy white. If the anode becomes dirty and slimy it shows that the solution is deficient in free cyanide; if, on the contrary, it shows a white crystalline appearance, and dissolves very fast, it shows an excess of free cyanide.

When the articles have been sufficiently coated with silver they must be taken from the bath, rinsed in clean water, and made as bright as can be with a scratch-brush dipped in stale beer or weak linseed tea, then well dried in clean hot sawdust. The next operation is that of burnishing, and this will be found the hardest and most difficult task. All neglect in preparing and polishing the article before plating it will have to be atoned for now in increased trouble. Spots not quite clean and free from grease and oxide, and parts touched with the bare finger will now blister under the burnisher. Scratches will bid defiance to the burnisher, and burnish as we will the patches left dull on the spoons will continue to reveal their locality. Steel or agate burnishers in various forms, for spoons, forks, &c., can be purchased from dealers at prices from 1s. 6d. upward, but the necessary skill to use them cannot be bought with them nor taught here. Experience alone will teach us how to use a burnisher, but a few hints may be given to aid those who may decide upon attempting the job themselves. The strokes of the burnisher must always be given in one direction, but the pressure must be regulated by the strength of the article and the nature of the deposit. Go over the article thoroughly, making fair work as you proceed, and keep the burnisher moistened with soapsuds, linseed tea, or tea made from marsh-mallow. Be very careful about the edges and surfaces of the burnishers. Keep them well polished on a soft leather pad charged with jeweler's rouge, and always dry and polish them before putting them away. Burnish until every trace of white rouge metal has been made smooth, and do not forget the difficult niches and corners, for neglect of these shows bad workmanship. When the articles are well burnished they must be finished with a piece of buff leather stretched over a piece of willow and charged with prepared chalk and finally polished with the bare hand until the bowls of the spoons shine like mirrors.—*Mechanical World.*

WM. M. CHRISTY'S SONS, Publishers,

☞ Send for Price Lists. **PHILADELPHIA.**

THE attention of the trade is invited to **The * Christmas * Star** as a leaflet or card particularly suitable for sale during the Christmas Season. The publisher believes the shape, that of a star, is especially appropriate, associated as it is with the nativity of our Saviour. The designs are unique, and the lithography is executed in the highest style of the art. The poems were composed with special reference to the designs; and another feature which adds to the attractiveness of the Star is a carol set to music. Envelopes and protectors for mailing are provided. Trade supplied by CHAS. SCRIBNER'S SONS, C. T. DILLINGHAM, BAKER, PRATT & CO., AMERICAN NEWS COMPANY, ROBERTS & ROLLS, and by the PUBLISHER,

PATENT "PIN SHANK" FASTENERS.

Geo. W. McGill, the patentee of the celebrated fasteners bearing his name, has brought out through his manufacturers, Holmes, Booth & Haydens, 49 Chambers street, New York, a new line of fasteners which promise to become as popular and useful as are his well-known round and flat head fasteners. The new fasteners are styled McGill's patent pin-shank fasteners, and have round and flat heads, similar to the regular line, with round flexible wire shanks, pin-pointed, and placed parallel with each other at some distance apart. These new things are intended for attaching price and size tickets, tags, labels and such like to silks, woolens, cottons, dresses, ready-made clothing, socks, and all description of fibrous material, without cutting or in any way injuring the fibre of the material. This is accomplished by the formation of the fastener shanks, which, being fashioned and finished similar to the finest made pins, enter the finest silk by merely pushing aside the fibre without in any way injuring it. The fasteners are made with shanks varying in length, adapting them for binding many thicknesses of material, as well as for ticketing it, and are provided with plain and ornamental caps. Most of them are adapted for attaching any description of price and size tickets, while others are furnished with tickets attached to them in such a manner so as to admit of the use of one or both sides of the ticket for marking the goods. An illustrated advertisement of these and other of Mr. McGill's goods will be found in this issue of THE STATIONER.

THE GLOBE FILES COMPANY, CINCINNATI.

This company began business about seven months ago, entering into a field which by many was considered to be entirely covered. Through the judicious use of ample capital, and by able management, it has already succeeded in firmly establishing a flourishing business, which, from all appearances, bids fair to become a prominent element in the stationery trade of America.

That there are no end of letter files and bill files and all sorts of files for papers, every one knows, and yet the file business has never before been attempted as an exclusive business by any responsible and enterprising house.

The gentlemen who are now stockholders in this company, conceiving that the demand for such goods had reached proportions to justify the cost and risk of organizing a first-class concern for the development of this branch of trade, incorporated under the name of the Globe Files Company, with capital stock $60,000, basing their operations on the patents of Geo. V. Nauerth, which they purchased.

George V. Nauerth, the inventor, is at the head of the company with title of president, and the business management is in the hands of the secretary, H. C. Yeiser, formerly of W. B. Carpenter & Co., the well-known stationers, among the directors appear the names of several members of the firm of Van Antwerp, Bragg & Co.

Since beginning business the company has added largely to the variety of its goods, and now presents what seems to be a most complete system of files for the office and library, comprising office cabinets of all sizes and prices, letter files, bill files, scrap and pamphlet files, music files, and others entirely too numerous to mention, all of which are exceedingly convenient and very beautiful in workmanship.

The company has already been obliged to increase their manufacturing facilities, and now occupies five floors in the buildings, Nos. 19 and 21 West Sixth street, Cincinnati, which is being crowded to its full capacity to keep up with the rapid increase of business.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

HISTORY AND PROGRESS OF THE MIRROR.

[Continued.]

The ordinary looking-glass for bedrooms is known in the trade as the arch top, and the wholesale value, according to size, ranges from $2.50 to $40 a dozen. Fancy mirrors are almost all imported. The three-fold extending looking-glass, the cheval glass, all mirrors in dainty frameworks of china, come from foreign sources, although in many cases they are shipped in separate consignments, the glass from one quarter, the porcelain or papier-maché from another. The fashion of decorating rooms with looking-glasses has undergone considerable modification during the past ten or twelve years. The mantel mirror in no longer *de rigueur;* on the contrary, the long looking-glass is almost unseen in the modern drawing-room, and if it appears at all is no longer incumbered with a mass of elaborate framework in monotonous gilding, but subordinate to artistic detail in a frame which is usually designed with regard to the coloring and furniture of a room.

In very handsome apartments we find the mirror with a frame of ebony; or sometimes, although the effect is somewhat heavy, the framework will be of carved oak, but, generally speaking, the mirror is discarded in favor of other ornaments. In reception rooms, where the gilded frame is yet to be more constantly met with, the most handsome effects are produced by the introduction of shelves or recesses on either side of the glass. We have seen instances in which the shelves themselves were decorated by the introduction of cameos let into the gilding. Such elaborate mirrors are, of course, entirely out of place in ordinary rooms, and in these the best effects are obtained by multiplying smaller looking-glasses in different positions in the room, rather than by placing one over the mantel-shelf. Oval mirrors, with brackets for lights, are very effective. Long mirrors between the windows savor rather too much of the upholsterer, and are found in many rooms nowadays as fixtures, often very much out of place, indeed. There is very little sense, after all, in a mirror which reflects nothing but the door opposite to it, with, perhaps, a table between them. The charm of looking-glass decoration lies in the possibility of illusion, and we should say their use ought to be restricted to the toilet room, where they are necessities, or to positions where they can excite the imagination by the suggestion of beauties half revealed and half concealed.

Visitors to the European countries have favorable opportunities for the study of looking-glasses. There are, so far as we are aware, no instances in the United States of that exuberant belief in the efficacy of looking-glasses which is so eminently characteristic of the French and German mind—in the Kursaals of fashionable bathing resorts in Germany, for example, where a hall is sufficiently furnished if provided with gilding and mirrors, and where each officer, as he steps forward to take his place in the dance, may be seen combing his mustache and smiling with sublime self-satisfaction at his image in the glass! French taste is proverbial, yet in the matter of looking-glasses it is merged in an ocean of self-appreciation. In the most glittering salons in New York an attempt is generally made to mitigate, in some measure at least, the unblushing effrontery of a long mirror; in most iustances a box of flowers or ferns will find reflection in it; and only in rare cases do we find the decoration of a room limited to the multiplication of overgrown mirrors. The prevailing fashion of hanging many small ones in different portions of a room at varying angles is a great improvement upon the foreign and old-fashioned method, both from a decorative and scientific standpoint. The refraction of light is greater at an angle than in a straight line, and every one realizes how invaluable the mirror has been and must continue to be, for the purpose of scientific investigation. But a consideration of its uses in this respect would lead us into the wide field of optics and optical delusions, which we are scarcely competent to cope with, and we would rather turn our attention to the great interest taken to-day in the decoration of mirrors, not only by means of elaborate framing, but by painting and gilding the glass itself.

[To be Continued.]

If you will follow this rule you will save yourself many a heartache: "Never bite till you find out whether it is bread or stone."

The brain is a very hungry thing indeed, and he who possesses it must constantly feed it by reading or thinking, or it will shrivel up or fall asleep.

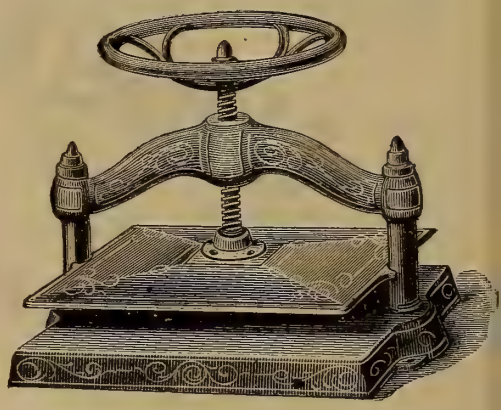
WM. F. MURPHY'S SONS,

No. 509 Chestnut Street, Philadelphia, Pa.

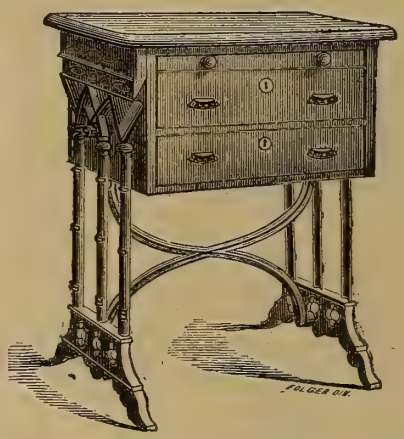


SPECIALTIES:

LETTERPRESS COPYING BOOK,

Railroad and Bank Supplies.

TATUM'S COPYING PRESS.



The attention of foreign as well as American readers is directed to the improved copying press made by Samuel C. Tatum & Co., Cincinnati, Ohio. The cut illustrates their new press for 12x18 books, now largely used for ruled invoice copying-books. Their dished or concave

wheel has proved so popular that they are putting it upon their largest presses as well.

They have also taken advantage of the growing disposition to do away with sharp edges in all castings—a decided improvement, since the round corners add both to the appearance and strength of the press. Their presses can be readily taken apart, there being no screws filled in with solder.

Their copying-press stands have a distinctive

feature in the brace, as shown. This makes the stand much stiffer than the rods usually employed. The cases being made of seasoned lumber, are free from the cracks aad warps so often a cause of annoyance to both dealer and customer.

A LEGAL POINT—WAIVER BY NEGLECT.

The effect of neglect in waiving certain forms of procedure was determined on Saturday last by Judge Wallace in the sewing machine suit of Boland against Thompson. It is well settled that a mere plea denying infringement can be set aside on motion. Such a plea was entered by the defense, but the plaintiff, desiring an adjudication on this head, replied to the plea and took testimony. The defendant then made a motion for leave to withdraw the plea and substitute an answer with other defenses. The court decided that the plea could not be withdrawn, and denied the motion. Turner, Lee & McClure appeared in behalf of the motion, and James A. Whitney against.

An obstinate man does not hold opinions ; they hold him.

THE TRAVELING MAN.

The appended verses were written by a traveling man and read before the "Convention" a year ago. They are reprinted at the request of another traveling man, who regrets that he cannot recall the author's name.

Could I pour out the nectar the gods only can,
I would fill up the glass to the brim,
And drink the success of the traveling man,
And the house represented by him;
And could I but tincture the glorious draught
With his smiles, as I drink to him then,
And the jokes he has told and the laughs he has laughed,
I would fill up the goblet again—

And drink to the sweetheart who gave him good-bye
With a tenderness thrilling him this
Very hour, as he thinks of the tear in her eye
That salted the sweet of her kiss;
To her truest of hearts and her fairest of hands
I would drink, with all serious prayers,
Since the heart she must trust is a traveling man's,
And as warm as the ulster he wears.

I would drink to the wife, with the babe on her knee,
That awaits his returning in vain,
Who breaks his brief letters so tremulously,
And reads them again and again!
And I'd drink to the feeble old mother who sits
At the warm fireside of her son,
And murmurs and weeps o'er the stockings she knits,
As she thinks of the wandering one.

I would drink a long life and a health to the friends
Who have met him with smiles and with cheer—
To the generous hand that the stranger extends
To the wayfarer journeying here.
And at last, when he turns from his earthly abode,
And pays the last fare that he can,
Mine Host of the Inn at the end of the road
Will welcome the traveling man.

MILTON BRADLEY & CO.

The establishment of Milton Bradley & Co., at Springfield, Mass., which turns out a large share of the toys consumed by the children of this country, is now one of the noted manufacturing features of the thriving city where it is located. Like most things of much worth, the present great business sprang from a small beginning, a start having been made with "The Checkered Game of Life," though the greatest early success was with a panorama published in 1865, exhibiting the principal scenes of the war which was just closing. The novelty of the toy and its timely character made it very popular from the start, and from that day Mr. Bradley continued to originate and manufacture toys and games, until now the house, of which he is the head, controls many of the most valuable and popular goods in the market. New toys are added each year, while the best of the old ones survive for many seasons, and the company's annual catalogue is now eagerly looked for when the dealers begin to prepare for the holiday trade.

The company's new quarters are very commodious, but although this is only the first season in them Mr. Bradley says that he is already pinched for room. This would be true, no doubt, if he occupied a good deal more space, and one principal reason is the bulky nature of some of the new toys. The establishment occupies 100 feet in length of a large brick building, using five stories, besides three stories of another structure of the same length in the rear. Here are housed the different departments of a manufacturing business as unique and interesting as can be found anywhere.

The lithographic work, which is demanded in great variety by the needs of the business, is given the basement of the front building, a space 100 by 40 feet large, and another large room is occupied by the printing presses. The difficult process of printing on wood is here done very successfully, the impression on the wood toys being as clear and distinct as on paper. The old way was to do all the printing on paper and stick the paper upon the wood, but we all know what quick work children make of such toys, and therefore it is easy to appreciate the improvement. Last spring when the company's new quarters were opened with a supper, the *menu* was neatly printed on pretty little slabs of wood, and was quite novel and appropriate.

Bradley & Co. now do a considerable export business, though, when they began making toys, almost all of this class of goods used in the United States were imported. Much of the clever machinery used in the work was invented by Mr. Bradley or his men, and is well worth inspecting. Mr. Bradley himself early won distinction as a draughtsman and inventive genius, and he has always been the real brains of this peculiarly Yankee manufactory. The best of the toys and games, and the machinery used in making them, are all patented.

Tha season of 1882 is proving the most successful in the history of the house. More goods have been made than ever before and the demand for them was never so great.

The catalogue, which is a beautiful specimen of the engraver's and printer's art, contains some novelties this season which, from their attractiveness, must take permanent places on the company's shelves. Several new toys and games are for the first time illustrated in this catalogue, which also contains full descriptions of all of the old favorites. Indeed, this catalogue may be regarded as a toy-book in itself, and would attract attention from all classes of buyers.

Mr. Bradley was the first manufacturer in this country of kindergarten material and published the first book in the English language on the subject. It has been a mere work of love for years, but he is now just beginning to make extended sales and to realize a little profit from the business.

To be healthy and complete, we must live alternately—now with our fellows and the world now with ourselves and the universe. If principles grow in the soil of soli citude, actions ripen in the air of society.

ARTIFICIAL LEATHER

Is the only substitute for Upper Leather in the world that has proved satisfactory and practical, and that cannot be distinguished from Leather. It is very durable; not affected by heat or cold; is impervious to oil or water, rendering it for many purposes superior to Leather, as those who have used it have voluntarily testified. It is made in light and heavy weights, so that it can be substituted for cheap as well as costly leather, and costs from one-third to two-thirds less, according to the kind for which it is substituted. It is made 36 and 50 inches in width, and in any color desired; also in Gold, Silver and Bronze. The attention of Bookbinders and Pocket-book Manufacturers is particularly called to this article.

Power Embossing PRESS.

THIS is a powerful and simple machine, and is complete in every respect. The power can be thrown off and a break stops the bed instantly, thereby saving any covers or expensive plates from being damaged. The press is worked by a cam and toggle; the impression is regulated by bevel-cut gears on top, and the bed platen can be run up or down by hand-wheel on left side. Our new method of using steel rods makes the press much stronger than iron cast frames. It has a movable bed; can be used for steam or gas heat; is supplied with oil cups. This Embosser is strong and large enough for all regular work in a bindery.

Space between upright rods, 17 ins. Size of head, 9½ × 13½ ins.

PRICE, $375.00.

BYRON WESTON,

DALTON, MASS., U. S. A.,

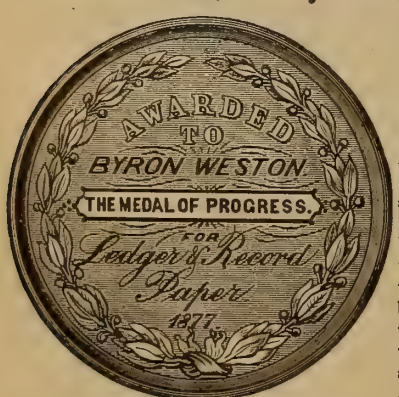
HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

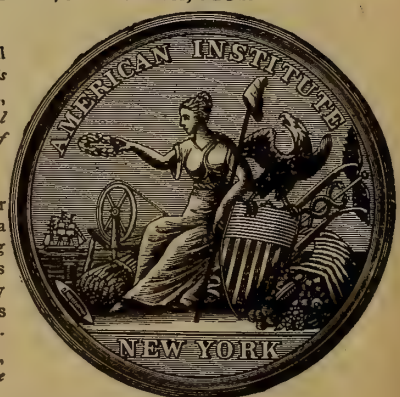
At PARIS, 1878,



This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.



—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**

Each sheet is water-marked with name and date.

LOCKWOOD PRESS, 74 Duane Street, New York.

Correspondence.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, October 23, 1882.

There is a lull in business—retail business—here just now. It is only temporary. The rag product is prodigious, counting it per capita from the region which supplies this material—the local region, I mean—and that is a never-failing indication of general prosperity. The weather has been fine for autumn agricultural work, and men, when working out-doors, do not buy much. The little operation of purchasing luxuries they put off till a rainy day.

By the way, the head of the greatest book printing concern in the West, not to say the greatest in the world in its specialty, told me to-day he had just ordered two splendid stop-cylinder presses. He also said that he was daily in receipt of requests for work that is not adequately supplied here, and suggested that there is no better opening anywhere than in Cincinnati, and that right away, for an establishment somewhat like the Riverside or University Press. What is wanted is an immense concern, provided with ample facilities for producing the best book and job type in all its varieties, and setting up and electrotyping bookwork and the like. A company could be started here immediately, and if brains and skill and experience sufficient to command confidence were forth, coming, a large amount of stock could be obtained here very quickly. Cincinnati is an art centre already, and it aspires to be a literary centre. A word to the wise is sufficient.

Charles Stewart has just returned from Kansas, he says; but it was in fact from Colorado where he has subterranean interests—200 to 300 ounces to the ton; a lucky man couldn't have less.

The Dennison Tag Company is proud of its growth in trade with the South quite as well as of the firmness with which it holds its Western and local field. This refers to the Cincinnati branch house.

John Holland is turning off 2,400 pocket business pencils a week, and 1,200 business desk pencils and 600 stylographic pens at the same time. The variety of his charm pencils of ever-multiplying new designs is almost bewildering. The crowd of orders for pens taxes the capacity of his factory to the utmost, which already employs eight skilled workmen, and occupies extensive shop room. It will have to be enlarged immediately to fill orders promptly. The Iridium concern is quite another thing, in which Mr. Holland's interest is that of proprietor of the patent for fusing the metal. It is remote from the pen factory, has no connection with it, and is managed by other men. In fact, the pen, pencil and stylograph factory is a large customer of the Iridium Company.

The Globe Files Company's cabinets—and beauties they are, too—may be seen on sale everywhere. In all well arranged offices, one finds them in use.

The Peerless Paper File Company is prosperous to the full satisfaction of hopes and wishes within reason. The cheapness, convenience and substantial usefulness of these files commend them.

Some of the electroplating companies have been nickel-plating a few of Samuel C. Tatum's letter presses on individual orders, and the result is beautiful.

Sutphin & Wrenn have a regular boom in calls for their Paragon blotting-paper, and the flow of its current of trade to the East is increasing in volume and rapidity.

Black & Clawson, at Hamilton, ought to be gratified at the favor their perforating machines are finding in the eyes of consumers.

Wilstach, Baldwin & Co. are employing all of their presses to the fullest capacity, to fill orders, which keep crowding in.

W. B. Carpenter, of W. B. Carpenter & Co., has just returned from the South.

In specialties there are printing establishments in Cincinnati which will vie with any in the world. The one opening now par excellence is for that kind of work spoken of in the opening paragraph of this letter.

PRINCE WILLIAM.

LOUISVILLE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

LOUISVILLE, Ky., October 23, 1882.

The buoyant movement that began in Louisville trade circles two months ago attained and maintained an unprecedented volume, establishing the commercial capabilities of the city on a scale that, a year ago, seemed to require a decade to reach. The older business men here who have experienced many occasional "spurts" in bygone years, all agree that they never had a period of exceptional activity so long continued and firmly supported throughout as this present season. Besides, sales were never made on a healthier basis, nor was the percentage of cash transactions ever greater. The heavy demand for goods is partly the natural sequence of the scant purchases and enforced economy of the two previous seasons, but is principally due to the enlarged territory made tributary to and now trading in this market, the smoothness in money matters being primarily due to the bounteous harvests and high prices obtained for farm products. The later crops in Kentucky, corn and tobacco, are now secured in full yield and fine quality.

Houses which operate in the cotton belt have dated bills ahead about thirty days, in accordance with the tardy ripening of the fleecy staple. Well-posted merchants say that their Southern correspondence indicates that the total cotton crop of 1882 will be 6,700,000 bales, and in this connection there is a lively discussion as to whether the South would not make more money out of a crop of 4,000,000 bales than one of 6,000,000 or over. It is agreed, however, that the diversified crop system lately inaugurated is as progressive and successful as the new manufacturing era.

Louisville is vitally interested in Southern prosperity, yet it is a mistake to suppose that all of her trade efforts are in that direction, for up and down the Ohio valley, through the interior of Indiana and Illinois, by direct lines of railroad, and to the east along the Big Sandy River section, and into West Virginia, Virginia, on to Newport News, on the Atlantic coast, salesmen of representative jobbing and manufacturing concerns here are working more numerously than ever.

The annual Exposition has just closed; the attendance during the six weeks exceeded all previous seasons. Now comes the Board of Trade, with the strongest committee that ever interested itself in a public enterprise, presenting a plan to hold a National Exposition in this city in 1883, on the order of the recent Atlanta display. This project is so warmly indorsed that in my next letter I expect to be able to report all of the proposed details as fixed events.

In books, stationery and kindred lines, trade is well up with the general briskness. The Main street houses report the blank-book and mercantile stationery business as especially active.

At Charles T. Dearing's, where all branches of the bookseller's stock are represented, everything is animated and flourishing.

The attractive new store of Jacob Lang, Jr., on West Jefferson street, is a good place to feel the pulse of the retail trade, and there I found it to be throbbing lively. Mr. Lang says that he never saw the time when novelties, stationery and fancy goods found such a ready, easy sale.

Curry & Dearing report a run on high-tint note papers. Louisville ladies prefer a large visiting card—almost square—with name written instead of printed.

The *Volksblatt*, the only German Republican daily and weekly in the city, suspended publica-

tion yesterday. William Krippenstapel, who started the paper twenty years ago, remarks in his valedictory card that the paper has not paid for two years, and that the fatal blunder made in Ohio has caused many Germans in that State, since the election, to write that their subscription will be stopped.

L. A. Williams & Co., who recently published "A History of the Falls Cities," have found it necessary to bring numerous suits in the various courts here to force alleged subscribers to the volume to accept and pay for it. Many of the "alleged subscribers" deny that they ever contracted for it, and several meetings have been held, in which the "book agents" were denounced more severely than even that race is accustomed to be. Among the suits brought is one against the Mayor, who, the publishers claim, agreed to pay $300 for the insertion of his portrait, together with fifty extra copies of the engraving to be furnished him, for which he now refuses to settle. The publishers have obtained several judgments, which have been appealed from, and in other instances the defendants have gained verdicts. The whole trouble, which has furnished a great deal of material for newspaper items and magistrates' juries, seems to have been caused by the rose-colored representations of the subscription agents, which have not panned out.

Robert W. Johnson, a prominent member of the Louisville Typographical Union, died last week; he was for a number of years employed on the old *Journal*, and was a remarkably fine compositor.

The number of trade visitors is rapidly decreasing and most of them are homeward bound; among the recent arrivals were Geo. Freeman, for the American Lead Pencil Co.; Mr. Gibbs, for Willy Wallach; Mr. Koch, of Koch, Sons & Co.; Mr. Chamberlain, for Z. Crane, Jr., & Brother, and Mr. Lyons, of B. B. Lyons & Brother.

BOURBON.

TORONTO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, Ont., October 21, 1882.

The weather, through September and this month so far, has been simply delightful, and we would not object to a long continuance of the same, but, in the natural course of things, a change may be looked for at any time. Already the woods and fields have assumed their autumnal dress and the walks and shady retreats are carpeted with faded leaflets; and soon the chilly winds of November will moan through the bare trees and sweep along the streets. It makes one shiver to think of it.

We should have a queer spell of weather if everybody could make it to suit his views. The mild and equitable temperature of the past week has been good for late crops and the dairyman. Grain and produce are coming in freely; business is brisk, payments good. What more is wanted to make ordinary mortals happy? And yet the dry-goods people say it is altogether too fine—we want cold, stormy weather to make our winter goods move off briskly.

The exports to the United States from the Toronto district for the past quarter amount to $2,783,330. The principal articles shipped are barley, lumber and horses.

Robert Duncan, of R. Duncan & Co., Hamilton, has bought out the business of Bautz, Clayton & Burton, lithographers, &c., and will continue under the name of "The Duncan Lithograph Company." From Mr. Duncan's well-known business tact and energy, we may confidently expect that the establishment will at once take its place among the first in the country.

The rapidly increasing business of the Methodist Book and Publishing House has compelled the management to make further large additions to its premises. This has been done by extending the main building farther back and adding an additional story. The upper flats have been reconstructed, giving nearly twice the amount of room. This, with one additional hoist, will greatly facilitate the handling of stock. An engraving department has recently been added, where wood engraving is done in all its branches. When the alterations, now nearly done, are completed, the house will be one of the largest and most complete in the Dominion.

Kilgour Brothers, paper-bag makers, &c., have erected this season on Wellington street one of the finest warehouses in the city. The building is of red brick, with freestone facings, and one of the most attractive façades on the street.

R. Brown, of Brown Brothers, is away to your city this week.

The wholesale stationers and booksellers of this city have mutually agreed to reduce cash discounts from 5 per cent. to 3 per cent. The reason assigned for this action is that money is not worth 5 per cent., which may be true; but will it not have the effect of reducing cash purchases? It seems to me that to make this move really effective the terms of credit should have been shortened at the same time. As the case now stands, the inducement to pay cash is considerably lessened, and to give bills greatly increased. I am strongly inclined to the belief that the arrangement will not stand.

R. O. Smith & Co., booksellers, &c., have sold their stock to the Standard Publishing Company, which has been recently organized here with an authorized capital of $100,000. The new company has purchased the stock and goodwill of the *Canadian Baptist*, and intends conducting a first-class book and stationery business, at 117 Yonge street, in the interest of the Baptist denomination. Rev. S. A. Dyke has been appointed general manager, and R. O. Smith book and stationery manager. They are fitting up fine premises and expect to occupy them in a few days.

C. H.

A new machine for coloring paper for paper-hangings, &c., has been exhibited at Frankfort. The paper is fed into the machine from rolls, and, being automatically unwound, is colored, dried, smoothed, pressed and re-wound. The principle is simply a series of cylinders, and appears to be effectual. One point in favor of the invention seems to be the fact that a small engine of only ½ horse-power suffices to drive all the cylinders.

Fortune does not change men, it only unmasks them.

ALLOY FOR SILVERING METALS.

A method for silvering, or, more properly, whitening metals, has been recently devised by M. De Villiers. It is a modification of the tinning process, an alloy being used instead of the pure tin. This alloy consists of 80 parts tin, 18 parts lead and two parts silver, or 90 parts tin, 9 parts lead and 1 part silver. The tin is melted first, and when the bath is of a brilliant white the lead is added in grains, and the mixture stirred with a stick of pine wood, the partially melted silver is added and the mixture stirred again. The fire is then increased for a little while, and the surface of the bath assumes a light yellow color, when it is thoroughly stirred up and the alloy cast in bars. The operation is then carried out in the following manner: The article, a knife-blade, for example, is dipped in a solution of hydrochloric or sulphuric acid, rinsed with clean water, dried and rubbed with a piece of soft leather or dry sponge, and finally exposed to a temperature of 70° or 80° Centigrade—158° to 176° Fahr.—for five minutes in a muffle, to prepare the iron or steel to receive the alloy, by making the surface porous. If the iron is not very good, the pores are large, and frequently flaws and bad places are disclosed, which make the silvering more difficult. With steel the process goes on very regularly. The article, warmed to, say, 140° Fahr., is dipped in the bath, melted in a crucible over a gentle fire. The bath must be perfectly fluid, and is stirred with a stick of pine or poplar; the surface of the bath must have a fine white silver color. For a knife-blade an immersion of one or two minutes is sufficient to cover it; larger articles require five minutes of immersion. After taking it out of the bath it is dipped in cold water, or treated so as to temper it if necessary. If left too long in cold water it frequently becomes brittle. It is then only necessary to rub it off dry and polish without heating it. Articles treated in this manner look like silver, and ring like it too, and withstand the oxidizing action of the air. To protect them from the effect of acid liquids, like vinegar, they are dipped in a bath of amalgam, composed of 60 parts mercury, 39 parts of tin, and 1 part of silver, then dipped warm into melted silver, or electro-plated with silver to give them the silvery look. This kind of silvering is said to be very durable, and the cost comparatively small.

A mode of etching on copper has fallen into disuse. Its process may be a matter of curiosity to some. It was styled aquatinta. Imitations of drawing in india-ink and other conceptions could be produced on copper by making a ground of black resin upon which to trace the design. When the design is on the plate, rub a solution of diluted sulphuric acid over it. The design will then be engaved on the copper, and the plate can be used to print from.

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

THE previous success of our Cards, it is confidently expected, will be fully sustained, if not increased this season, an expectation which is already verified by the large advance orders received, justifying our increased efforts to bring out a line superior to all our previous productions. Our line will again comprise Double and Fringed Cards as well as Heavy Mounts. All the Fringed Cards will be provided with protectors, and envelopes will be furnished for all cards costing $1.80 and upward. The names of the artists who have contributed designs are a guarantee of the excellence of our Cards. We will name only the following :

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,

MISS F. BRIDGES,
MISS ROSINA EMMET,
THOMAS MORAN,
ALEXANDER SANDIER,
R. G. BIRCH,
GEO. J. BARNES,

MISS DORA WHEELER,
MISS FLORENCE TABER,
FREDERICK DIELMAN,
HARRY BEARD,
F. SCHUYLER MATHEWS,
H. P. KENDALL.

The literary matter in connection with our designs has been carefully attended to, among others, by MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

NEW PATENTS.

No. 265,556. Printing Machine.—Edwyn Anthony, Hereford. County of Hereford, and William W. Taylor, Ripon, County of York, England, assignors to R. Hoe & Co., New York, N. Y. Patented in England August 31, 1875, No. 3,056.

The combination, with devices for advancing two webs of paper, of a turner arranged obliquely to the path of travel of the webs, whereby one of the two webs will be transferred laterally while both are running onward, and the two webs be associated one above the other, with the surface of the transferred web that was uppermost before transfer still uppermost.

No. 265,557. Printing Machine.—Edwyn Anthony, Hereford, County of Hereford, and William W. Taylor, Ripon, County of York, England, assignors to R. Hoe & Co., New York, N. Y. Patented in England, August 31, 1875, No. 3,056.

No. 265,616. Toy Box for Exploding Fulminate Wafers.—Amos M. Lyon, New York, N. Y., and Henry S. Lockwood, South Norwalk, Conn., assignors to Stein & Lyon, New York, N. Y., and the Lockwood Manufacturing Company, South Norwalk, Conn.

A toy box having a sliding cover, a figure fixedly mounted thereon, a figure pivotally mounted in the box having a curved front, a heel-piece, spring, and a detent, the parts operating to explode a fulminate wafer when the box is opened.

No. 265,623. Machine for Cutting Wooden Types.—Volney M. Moreau, Corunna, Mich.

No. 265,625. Box for Letter Paper and Envelopes.—Henry F. Oakes, New York, N. Y., assignor to White & Stokes, same place.

No. 265,631. Tag-Fastener.—Nathan M. Phillips and John C. St. John, New York, N. Y.

No. 265,638. Mail-Tag Holder.—Leroy S. Sanborn, Portland, Me.

No. 265,643. Machine for Creasing and Pasting Blanks.—Frank H. Strieby and Matthew Rankin, Cleveland, Ohio.

The combination, with a plate provided with creasing knives and pasting pads, a blank-holding table provided with grooves to receive the knives, and a paste receptacle and distributor located below said pads, of devices, for moving said plate to first bring said pads in contact with the paste distributor, and, secondly, to bring both the knives and pads in contact with said table to simultaneously crease and paste the blank lying thereon.

No. 265,651. Printing Machine.—Edwyn Anthony, Hereford, County of Hereford, and William W. Taylor, Ripon, County of York, England, assignors to R. Hoe & Co., New York, N. Y. Patented in England August 31, 1875, No. 3,056.

No. 265,660. Stereotype-Plate Holder.—Charles E. Curtiss, Brooklyn, N. Y.

No. 265,669. Photography.—Hannibal Goodwin, Newark, N. J.

In the process of etching with an acid on a metal or stone surface photographically prepared for the production of a printing plate, flowing the photographically impressed, developed and inked plate with dragon's blood, then removing the ink and its overlying film of dragon's blood by means of turpentine, and then with a suitable solvent removing the hardened albumen.

No. 265,700. Flower Holder and Stand. Joseph Perkins, San Francisco, Cal.

A basket or other receptacle having a reservoir attached to its bottom, and opening therefrom, in combination with a support or stand constructed to sustain the receptacle and conceal the reservoir from view.

No. 265,717. Index.—Lewis B. Tebbetts, St. Louis, Mo.

An index the pages of which have the initials of the names printed diagonally upon the pages, and being ruled to form vertical spaces to enable the reference number to be entered in columns, respectively, beneath said initials.

No. 265,721. Decorative Tile.—Savillion Van Campen, New York, N. Y.

1. A decorative tile made of paper and finished in imitation of pottery tiles. 2. The process of making decorative tiles of paper, which consists in first producing designs in relief on a sheet of paper, spreading over the relief surface a coat of size, and then flooding the surface with a coloring solution, which is allowed to settle thereon in a natural manner. 3. The process of manufacturing paper tiles, consisting in producing figures in relief on a sheet of paper, securing the same to a backing of smooth paper, coating the relievo surface with size, and flowing over it a coloring solution containing size, and then applying a coat of varnish.

No. 265,730. Lead and Crayon Holder —Phillips Abbott and Charles C. Parsons, Brooklyn, assignors to Joseph Reckendorfer, New York, N. Y.

No. 265,743. Paper Perforator. — James B. Bray, Waverley, N. Y.

No. 265,762. Printer's Locking-up Device.—Benjamin F. Curtis, Cincinnati, Ohio, assignor of one-half to Robert C. Fitzgerald, same place.

No. 265,795. Fountain Pen.—J. Fred. Franklin, New York, N. Y.

No. 265,808. Time Stamp.—John C. Hinchman, Summit, N. J.

The combination of a stationary stereotyped representation of a time dial, a disk or plate revolving concentrically upon the face of said dial, and carrying a representation of a pointer, a platen for simultaneously taking an impression of said dial and its pointer, a seat for supporting said disk when struck by the platen, and a spring for supporting said disk out of contact with its seat, except at the moment of taking an impression.

No. 265,832. Machine for Staining and Drying Paper. —Albert Komp, New York, N. Y.

No. 265,836. Advertising Device.—Frank H. Lindner, Brooklyn, N. Y.

No. 265,855. Combined Desk-Frame and Tablet.—William H. Nelson and Moses J. Waterman, Alexandria, Va.

No. 265,867. Printing Ink.—William Reissig, Darmstadt, assignor to Gebrueder Schmidt, Bockenheim, near Frankfort-on-the-Main, Germany.

An improved printer's ink, consisting of black or dioxide of manganese and linseed-oil varnish.

No. 265,872. Hand-Stamp. — George J. B. Rodwell, Toronto, Ont., Canada, assignor of one-half to William Dicks, same place.

No. 265,884. Muslin Paper for the Manufacture of Paper Bags.—Thomas Stewart, Philadelphia, Pa.

As an article of manufacture, paper for the manufacture of sacks, bags or similar articles, having muslin netting embedded in and covered on both sides by the pulp in the process of manufacturing the paper.

No. 265,885. Marking Pen.—James W. Stoakes, Milan, Ohio.

An improved marking pen consisting of two broad, blunt, flexible blades of the same length, lying opposite and converging toward each other at their upper and lower ends, and each provided with one or more slits parallel with the sides of the pen.

No. 265,893. Purse.—Anna M. Town, St. Johns, Kan.

No. 265,894. Lead and Crayon Holder.—Richard W. Uhlig, New York, N. Y., assignor to Joseph Reckendorfer, same place.

No. 265,918. Method of Preparing Matrix Forms for Stereotyping. — Merritt H. Dement, Brooklyn, N. Y.

DESIGNS.

No. 13,330. Photographic Cards.—Frank B. Clench, Lockport, N. Y. Term of patent, 7 years.

No. 13,331. Shelf Cover.—Herman Force, Montrose, N. Y. Term of patent, 14 years.

No. 13,336. Globe. — Jacob J. Nichols, Brooklyn, N. Y. Term of patent, 7 years.

No. 14,328.—Printing-Type.—Joseph W. Phinney, Boston, Mass., assignor to G. J. Pierce, A. Phemister, and A. C. Converse, same place. Term of patent, 7 years.

BUDDHA'S BOWL.

It is reported from India that the fragments of Buddha's begging bowl have been found in a Buddhist's tope or relic mound at Sopara, in the Bombay presidency. Old manuscripts describe the burial of these fragments very minutely. In the mound was discovered a small chamber containing a large stone coffer. This contained, first, a copper casket, which in its turn held one of silver, then came one of stone, next one of crystal, and finally a small domed golden casket, which enshrined thirteen shreds of earthenware, apparently the long-lost relics. The interstices between the caskets were filled with sweet powders and gold-leaf flowers, jewels of small value and Buddhist symbols being also found. According to a coin discovered, the relics are about 1,700 years old.

ACID FOR THE HANDS.—Remember that one can have the hands in soapsuds with soft soap without injury to the skin if the hands are dipped in vinegar or lemon juice immediately after. The acids destroy the corrosive effects of the alkali and makes the hands soft and white. Indian meal and vinegar or lemon juice used on the hands when roughened by cold or labor will heal and soften them. Rub the hands in this, then wash off thoroughly and rub in glycerine. Those who suffer from chapped hands in the winter will find this comforting.

A pearl-making industry has sprung up in the Thuringian forests of Germany, and a large demand for the goods from abroad has made a boom in wages. The secret of making the so-called "lack-lustre" pearls was accidentally discovered by a workman who put one of the original samples in his mouth, and felt a tiny grain of sand upon it. Previous to this, acids had been tried without success, but the lucky workman tried "rubbing up" the pearls with common sand, and in less than a week hundreds of his fellows were making a living at the same work, and handsome goods were produced that now find a ready sale in the markets of the world.

The Chicago, Burlington and Quincy Railroad Company has just issued an illustrated treatise, "The Heart of the Continent," describing the wonderful growth of the six great States. The book is beautifully printed, and numerous engravings of high merit adorn its pages. Any one sending their name and address with two three cent pastage-stamps will receive a copy by return mail, by applying to Perceval Lowell, General Passenger Agent, Chicago, Ill.

Power Embossing PRESS.

THIS is a powerful and simple machine, and is complete in every respect. The power can be thrown off and a break stops the bed instantly, thereby saving any covers or expensive plates from being damaged. The press is worked by a cam and toggle: the impression is regulated by bevel-cut gears on top, and the bed platen can be run up or down by hand-wheel on left side. Our new method of using steel rods makes the press much stronger than iron cast frames. It has a movable bed; can be used for steam or gas heat; is supplied with oil cups. This Embosser is strong and large enough for all regular work in a bindery.

Space between upright rods, 17 ins. Size of head, $9\frac{1}{2} \times 13\frac{1}{2}$ ins.

PRICE, $375.00.

BIRNIE PAPER CO., SPRINGFIELD, MASS.,

—MANUFACTURERS OF—

Regular Sizes of Envelopes in large quantities at low prices. Odd Sizes to Order.

Paper, Envelopes and Papeteries.

We Rule and Cut Engine-sized Paper of any desired length, not exceeding 25 inches wide, by our new patent machinery, at a great saving of expense.
Our Travelers are now out with a choice line of Holiday Papeteries, Plain, Illuminated and "Local," at prices that should insure us a fair share of patronage.

1882. PAPER HANGINGS. 1883.

By way of Customary Annual to the Trade, we beg to submit that the Samples now in our Agents' hands for Fall and Spring have been selected with most scrupulous care, and after an exhaustive examination of **All New Designs** cut by Standard Factories for the season's distribution.

We claim for the product a far **Higher Degree of Excellence** than heretofore compassed by any individual House, approximating, as closely as possible, a **Perfect Assortment.** Prices being equal, the comparative merit of those lines submitted to your notice will doubtless, to a great extent, control selection.

We challenge and respectfully solicit direct comparison of our collection with those of any other Houses representing that branch of artistic industry which is our **Exclusive Specialty.**

The untiring effort of over thirty years, which has resulted in our sales being the largest recorded for the past two seasons, has also given us an intimate knowledge of the wants of that widely extended trade to which we cater. This fact, coupled with unvarying promptness and watchful care of our customers' interests, will, we feel assured, secure for us a continuance of your esteemed patronage.

Our Agent will indicate, by direct correspondence, the date of his visit. Failing receipt of such advice, Samples shall be forwarded, free of expense, upon receipt of request.

Very truly yours,

JOHN J. McGRATH,

174 & 176 State St., Chicago.

To the Booksellers and Stationers

Gentlemen;

We have prepared a catalogue of specialties for the Holiday trade. It is finely illustrated, showing over one hundred choice designs, and will be forwarded to dealers, free of charge, upon receipt of their applications.

Very truly

John Wilson's Sons

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Peter Herder, paper dealer, New York city, has assigned.

Henry Miner, bookseller and stationer, Pittsburgh, Pa., is dead.

Geo. W. Rigby, dealer in second-hand books, Philadelphia, Pa., is dead.

J. W. Ladd & Co., stationers, &c., Shenandoah, Iowa, have made an assignment.

G. Ahner (agent), printer, St. Louis, Mo., has had his stock damaged by water; insured.

W. H. Hyde & Co., fancy goods dealers, Rockland, Me., have sold out to C. F. Kittredge.

Richard Lee has bought out L. G. Riggs & Co., publishers of the *Recorder* and printers, Meriden, Conn.

The stock of Robert D. Patterson & Co., wholesale stationers, St. Louis, Mo., has been damaged by fire.

S. Black has opened an agency at 76 Duane street, this city, for Hildesheimer & Faulkner's (London) art specialties.

Stewart & Chamberlain, publishers of the *Democrat*, Albany, Oregon, have dissolved partnership. Mr. Stewart has sold his interest to T. J. Soles.

The new "B. & O. Red Book" for New York is just out. It can be had gratis by addressing C. K. Lord, General Passenger Agent, B. & O. Railroad, Baltimore, Md.

Eberhard Faber has lately introduced an assortment of pro and repel pencils in celluloid barrels, mounted in gold. The designs represent tortoise-shell, malachite marble and moss agate, and the leads are in two sizes, viz., extra large and artist. These are neat goods for the holiday trade.

Robert Gair & Co., manufacturers of chromo-lithograph cards, with salesrooms at 163 Chambers street, this city, have dissolved partnership, the dissolution dating from September 21. A new firm has been formed under the style of Marques, Gair & Bailey, composed of Maurice Marques, Robert Gair and H. P. Bailey, who succeed to the business of the late firm of Robert Gair & Co., with whom all settlements may be made.

Milton Bradley & Co. have secured the exclusive right to manufacture and sell the Tapley patent self-indexing letter file, and will soon issue a new list to the trade. Although the sale of this file has never been vigorously pushed, it has steadily won favor with houses doing a moderate business and requiring a perfect file, simple in its operation, perfect in its action and economical in expense. The wood-case files, with removable indexes, are the most popular, durable and ornamental in offices, and these have all been made under contract by Milton Bradley & Co., for several years. They have recently made some improvements in the construction by substituting an automatically operating spring catch, which is a great convenience and which is applied to the goods now offered. While there are files and files in the market, the Tapley file is well known as filling a place peculiarly its own, and by its friends is considered superior as a permanent office fixture.

An English contemporary mentions some novelties in cards. One is a menu card, in the shape of a boy's kite, with a satin tail and tassel. One side, bordered in gold, is blank for printing upon; the other side has a characteristic oriental device, also worked in gold. Other cards, adapted for a variety of purposes are, when folded, 2¼ inches square. On the first page is worked in chromo-lithography a registered design, consisting of a painter's palette and brushes. Within this are neat landscapes. The remaining three pages have plain gold borders.

Lee & Shepard have selected eight of their original series of illustrated hymns and songs, including "Ring Out, Wild Bells," "Abide with Me," "He Giveth His Beloved Sleep," "Home, Sweet Home," &c., and will bring them out this season in a style combining the illustrated poem and Christmas card. Each book is in a rich and novel dress, with heavily fringed, beautiful cover designs in gold and colors.

At a session of the Tariff Commission, held at Philadelphia last week, W. E. Lockwood, in the interest of envelope manufacturers, protested against the Post-office Department entering into competition with the manufacturers by supplying stamped envelopes at less than cost. Thomas Donaldson, a picture dealer, asked that the duty on works of art be increased from 10 per cent. to 40 or 50 per cent.

The Chapin Paper and Pulp Company, Springfield, Mass., makes a specialty of the manufacture of engine-sized white and cream flat and ruled papers. Dealers are invited to send for samples and prices. The company keeps full lines of other papers in stock, and makes all kinds of paper to order.

A misprint occurred in the advertisement of E. & H. T. Anthony & Co., last week. The word Indo-tints should be substituted for "indolents." Particular attention is invited to these fac-simile reproductions of fine steel engravings.

Evans & Herger, book and stationery dealers, Buffalo, N. Y., have sold out the entire business to A. S. Barnes & Co., of this city, for whom they were local agents. The liabilities are about $15,000, and nominal assets $25,000.

Tuttle & Co., Rutland, Vt., now have ready for the trade Mrs. Dorr's "Santa Claus Souvenir" with white silk looped fringe. They have sold 20,000 copies of the souvenir in the United States and Canada.

A. H. Byington & Co., printers and publishers of the *Gazette*, Norwalk, Conn., have dissolved partnership. J. B. and G. N. Ells retire and A. H. Byington continues.

George Murdock, stationer, St. John, N. B., who recently failed, owes about $2,000; assets about $900. It is thought the estate will pay about 40 cents.

The judgment entered against Ezra W. Bliss, about a week previous to his assignment, was in favor of the La Belle Glass Company for $293.

Oberholtzer & Co., subscription book dealers, Toronto, Canada, are reported to have left town and sheriff in possession.

Several executions have been issued against W. H. Higgins, publisher of the Whitby *Chronicle*, Whitby, Canada.

H. E. Smallpiece, publisher, Guelph, Province of Ontario, has been sold out under chattel mortgage.

A. L. Phiele, publisher, San Francisco, Cal., is advertised to be sold out by the sheriff.

W. J. McCullagh, publisher, Bradford, Pa., has been sold out by the sheriff.

Mrs. J. Kennedy, dealer in notions, Morrison, Ill., has failed.

Rex Stanberry, printer, Mitchell, Dakota, has sold out to B. D. Cook.

Elmer E. Bellows, newsdealer, &c., Albany, N. Y., has made an assignment.

Harry Bachenbrimer, dealer in notions, Dayton, Ohio, has assigned to G. Stoffel.

Rennyson & Co., publishers of the *Daily News*, Norristown, Pa., have dissolved partnership.

George L. Pease, of Boorum & Pease, was among the five assignees substituted by Judge Van Brunt in place of Solomon Hanford, assignee of Alonzo Follett, the Wall street note broker, who failed for a large amount a few weeks ago. The application was made by Mr. Hanford.

The exhibit in the stationery department at the American Institute Fair is fully up to the standard of past years, and the display is one which cannot fail to interest almost every one visiting it. Among the most prominent exhibits is that of Keuffel & Esser, who occupy two places in the building, one of which is taken up by a handsome case containing a very full assortment of drawing materials, embracing mathematical instruments of Swiss, English and French manufacture, drawing papers, studies, water-colors, brushes, &c. Among the hard rubber and wood articles of their own make are curves, rules, triangles, T-squares, scales, drawing-boards, &c. This firm has the reputation of making only the best goods, all of which are stamped with its trade-mark and name, and sold under guaranty. The firm also agrees to exchange all instruments sold by it not being correct, or as represented. An article worthy of special mention is Bath's life-time or perpetual and changeable calendar. The calendar stands 11½ inches high and 8 inches wide at the base, and is a combination of blocks, cards and figures, and is so arranged that a boy or girl who understands figures can set it, as directions are sent with each calendar. The frame is made substantial and durable, with metal front (nickel plated), and makes a beautiful piece of cabinet work, and an ornament for the parlor, mantel piece, drawing-room, counting-room, bank, desk, store, and, in fact, any place where the days of the month are required, and will last from infancy to old age, in fact as long asdesired. The address of the manufacturer is 79 Washington ave. Brooklyn, N. Y. Thos L. Clacher shows a pamphlet, magazine and letter box. A neat, durable and cheap receptacle for filing magazines, pamphlets, sermons, letters or papers of any description that require to be kept ready for reference and free from dust and wear. It is made of light, strong wood, top and sides covered with paper, cloth on back, with gold lines, and title of magazine or contents in gold letters, giving it the appearance of a well-bound book. Inside the back is a blank index to note contents or any special article, for future reference, and is so arranged as to be easily written on without removing box from the shelf; by its use the contents can be ascertained at a glance by merely opening the back. It is adapted for the bookcase, or stands firmly on the table or floor, and is of strong wood on all sides. The door or cover works automatically by means of a strong concealed spring of music wire, which keeps it dust tight. When the box is opened, the slide on which the pamphlets or magazines rest can be drawn out. The back is then held open by the slide, leaving both hands free to select with. A slight pressure on the slide replaces contents

and shuts the box. The depôt for this article is at 107 East Twenty-eighth street, this city.

Miss H. L. Davis, dealer in fancy goods, Fitchburg, Mass., is closing out.

August Gast & Co., lithographers and printers, St. Louis, Mo., have been burned out; partly insured.

C. M. Hubbs, of the firm of Hoener, Rhoades & Hubbs, wholesale dealers in notions, Kansas City, Mo., is dead.

M. Schwartz & Brother, paper-stock dealers, New Orleans, La., have dissolved partnership. Louis Schwartz succeeds.

H. S. Crocker and wife, of San Francisco, Cal., left here to-day for their home, after quite an extended visit in the East.

Graffe & Harvey, publishers of the *Herald*, Prince Arthur's Landing, Ontario, have dissolved partnership. F. F. Graffe continues.

Edward Niedecken, of H. Niedecken & Co., of Milwaukee, returned from a visit to Europe, by the Britannic, this week, much improved in health. He left here for Milwaukee yesterday.

Roberts & Hillhouse, booksellers and stationers, Kalamazoo, Mich., have been continuously in business for twenty-five years as one firm and without change. Both partners are in the prime of life.

Samuel Carson, 120 Sutter street, San Francisco, is special agent for many leading publishing firms at Boston, New York, London, &c. He handles many of the best publications in the market, and productions in art and stationery novelties. Parties wanting a good representative on the Pacific Coast should confer with Mr. Carson.

Ivison, Blakeman, Taylor & Co. have issued the Spencerian Calendars for 1883. The pad is mounted on an illuminated card, which is produced by Marcus Ward & Co. in their usual style of art. There is a motto for every day in the year. Although Ivison, Blakeman, Taylor & Co. have imported a large lot of these calendars, they have already placed over half of them in the hands of dealers. Orders should be sent in quickly.

Richard L. Campbell, the junior member of the firm of Campbell & Smith, paper manufacturers and dealers, 112 Nassau street, this city, was united in marriage, on Tuesday afternoon, to Emeline F. Coe, daughter of Charles A. Coe. The ceremony, which was performed by Bishop Quintard, of Tennessee, assisted by the Rev. George D. Reese, of Dobb's Ferry, took place in the presence of a large number of friends and relatives. After the reception at the residence of the bride's father, the newly married couple started on a wedding trip preparatory to a tour in Europe. They will sail on the Cunard steamer Scythia, November 15. Congratulations and good wishes are extended.

Henry Levy & Son have just received an elegant lot of bisque and china from Dresden, Plane and Teplitz, consisting of busts on pedestals, artistic statuettes and figures, card and flower baskets. The last are from the celebrated manufactories of Schierolz and Stelmacher. The first-mentioned are ornamented with lilacs, pinks and moss roses harmoniously blended, the latter being of the Etruscan style in plain enamel body, ornamented with large roses in full bloom, so perfectly formed as to appear very like a natural flower. These goods having arrived late in the season will be closed out at a small advance on cost, giving a rare chance to dealers to lay in a first-class article at a low price.

"How to be weather-wise" is the title of a little work by Isaac P. Noyes, just published by Fowler & Wells. This is a brief and plainly-written explanation of the causes of changes in the weather, based upon the system of the United States Signal Service. It also explains the nature of that service. Comparatively few appreciate the value of the Weather Bureau, because its work is but little understood by the people who read the daily "Indications." Mr. Noyes shows how the data are obtained for these indications, and how simple a matter it is to observe weather signs, when the principle involved in weather movements is understood. Everybody, he claims, can observe the weather himself and be his own weather prophet, and in good, square English he indicates the way.

James D. Gill, Springfield, Mass., has done a good thing for his town and his generation. He has just published "Springfield Illustrated," a portfolio of views of Springfield, taken in and around the city. There are thirty-two views, produced by the photolithotype process, and they are certainly of artistic merit and very pleasing. Mr. Gill will also publish "Great Barrington Illustrated." Both of these portfolios exceed local interest in value.

C. K. Ferry has retired from the Connecticut Valley Card and Paper Company, Springfield, Mass. F. C. Lee will continue under the old style.

The Springfield City Paper Company has appointed N. B. Walker, of Baltimore, its Southern agent.

G. W. Wilkes, dealer in notions and fancy goods, Scranton, Miss., has made an assignment.

Brown & Maier, manufacturers of paper boxes, Atlanta, Ga., have dissolved partnership. A. D. Maier continues.

McMillan & McCarter, publishers of the *Monitor*, Meaford, Ontario, have dissolved partnership. McMillan & Co. have succeeded them.

There will be a preliminary meeting of the book trade of Baltimore, on Friday, October 27, for the purpose of reviving the Booksellers' Association of that city.

Spencer Spence, dealer in books and stationery, Ithaca, N. Y., has made an assignment to Charles J. Rumsey, giving preferences for $1,757. The unpreferred claims are said to amount to $1,821, and his total liabilities, inclusive of mortgage on real property, to $7,130.61. His unencumbered assets are valued at $2,718.86, and it is thought that the unpreferred creditors cannot secure 10 per cent. of their claims.

A ruined city has been discovered in the State of Chiapas, Mexico, which, according to report, bears much similitude to Palenque. It is situated fifty leagues to the north of Ococingo, in the department of Chilón, and will at once attract the attention of archæologists. The discoverer is named Isidro Búlnes.

The world does not require so much to be informed as to be reminded.

FOLEY'S PAT. IMPROVED STYLOGRAPHIC PEN.

Great reduction in price: No. 1, $1.75; No. 2, $2.50; No. 3, $2 50; No. 4, $3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

Signed by the following gentlemen and over 1,000 others: G. S. Coe, Pres. Am. Ex. Nat'l Bank; J. A. Beardsley, Cashier Nat'l Bank of North America; Wm. A. Fall, Pres. Corn Exchange Bank; R. H. THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, OCTOBER 26, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

A CORRESPONDENT has taken up the suggestion lately made by THE STATIONER, and has presented his views as to the proper way of displaying stock so as to attract trade. He shows an appreciation of the value of making effective appeals to the taste of buyers. Can we not hear from others on this subject?

THE rush of trade continues, and aside from the affairs of business people seem to be unable to think or talk of anything. If things could always go on this way the stationery trade would be happy. Differences are forgotten and vexed questions are laid aside. When the rush is over what excitement shall we have?

ARE people more extravagant than they were fifty years ago, or are they only keeping up with the developments of the day? We were told by an "old timer" lately that the requirements of people are not what they used to be, but that more and costlier articles of use are wanted. We think that our age is not exceptional for its extravagance. Ancient history gives us examples.

WHILE there are not an unusual number of changes in the constitution of firms, there are more than the average number of accessions by the formation of new houses. The book and stationery trade has so many points of fascination that it is not surprising that it should grow in numerical strength, but we are sometimes forced to ask ourselves if there is not undue expansion. People, we know, must have writing materials, and can still less get along without something to read. Going through a city like New York we are surprised at the combinations in trade whereby the stationery business becomes an adjunct of other pursuits. A man starts a newspaper route and forthwith begins to think of establishing a stand. This brings in the cheap "library" editions of popular publications, which are in turn followed by a few comic cards, which lead up to the finer fancies of lithographic art. So on, by degrees, the dealer takes in paper and envelopes, pencils of graphite and of slate, small school supplies, toys, and a variety of goods, with side-shows of candy or tobacco. Sometimes the tobacconist begins with playing cards, and follows up with a few other lines, until he, too, makes a combination business. The druggist does his share toward dividing up trade, and thus in various ways we reach that point of competition of which the trade proper have so much reason for complaint. We can easily see how, in a city so large as New York, this distribution is effected, and can discern and admit that there is some reason for it here, because the legitimate trade has not kept pace with the increase of population, the growth of the city and the positive necessities of the demand. But it is not so in other places, and the complaint which we have heard so often scarcely arises from the fault of the trade outside of New York, to meet requirements. In the minor way mentioned, the stationery business here is breaking out in this city in all parts; but, besides this, there is new blood in the wholesale business, and the question is whether it will be able to stand. We do not want to see any go under. Persistence and patience, honesty and prudence must win, and if crises arise, these elements will determine as to the "survival of the fittest."

MARRIED.

LOCKWOOD–DONE.—On Wednesday, October 25, by the Rev. Mr. Lathrop, of Stamford, Conn., at Barney Cottage, Irvington-on-Hudson, the residence of her brother, Clinton Gilbert Baker, Carrie Baker Done to Howard Lockwood, both of New York.

ANSWERS TO CORRESPONDENTS.

W. & Co. send sample of tin coin-holder and want to know who the maker is.

Ans.—It is known as the Hatch coin-holder (George C. Hatch, Bridgeport, Conn.), and Van Kleeck & Clark, 76 William street, New York, are said to be sole agents for its sale.

Subscriber wants to know who makes the steel stylus for manifold writing.

Ans.—Lebbeus H. Rogers, 75 Maiden lane, New York.

R. & H. want to know who manufactures "Albuloid" goods.

Ans.—We don't know. "Albuloid" is, we believe, one of several forms of products devised to enter into competition with celluloid, but with what success we cannot say. We are told that articles made from it have been in the market, but no one seems to know much about them.

CHATTEL MORTGAGES.

Window Dressing.

To the Editor of The Stationer:

In no other business is the artistic arrangement of stock so neglected as in the book and stationery trade, and the suggestion in THE STATIONER of September 28, to have the members of the trade exchange ideas in regard to it, is excellent. Why cannot the members of our craft follow the example of the dry-goods dealer, who makes window dressing the most important of his routine duties. It is one of his advertising mediums, in which he puts consid erable labor and expense, because he knows that an inviting window and a well-arranged stock is one of the best and most effective modes of advertising, and is an indicator by which the public gain an insight into the taste and character of the dealer.

It is important that strangers should get a good impression with a tasty window, or a polite reception when entering the store. Remember that first impressions go a great way, and when once formed, good or bad, are very hard to get rid of. Make it a special point to clean the window once a week, put in different stock every time, and do not be afraid to display goods because the dust will spoil them. If the article in question is delicate and easily ruined, leave it in the window only a few days; display samples of the latest goods, and, if necessary, buy some article that is showy and which you think will attract people, especially for the window, even though the amount expended is "sunk." It will certainly pay in the end. If your stock of a certain article or class of goods is large, devote the whole window to it for a week.

It is impossible to give rules for the arrangement, which, of course, depends on the goods to be shown and the taste of the party dressing he window. Stamped papers and visiting cards can be shown effectively in the following manner: Have a number of wooden blocks made the size of a quarter of a ream of paper and a package of visiting cards; wrap these neatly with a sample sheet of paper or cards on the outside, tied with ribbon. Another way to show printed visiting cards is to make a small pyramid of them by taking three small square boxes of different sizes, which, when placed one on top of the other, will form a small pyramid. Cover these entirely with samples of visiting cards, and place in the centre of the window.

The dealer who has no time to devote to his window or to the neat arrangement of his stock is generally unsuccessful. Passers-by do not deign to give a glance to his window, much less to enter his store, as they are tired of seeing the same old goods buried in dust. The glimpse of the inside of the store is less inviting than the window. There is no system to the arrangement of the goods, which are nearly all out of date and shop-worn; the photograph albums are worn; the inkstands have lost their platings by continued polishing; the boxes containing papers are worn and broken at the corners, and their contents are intermingled with dust; sample books are used up and the samples do not agree with the stock; the dealer is well "stocked" with unsalable goods and cannot afford to buy anything new until the old are sold. He cannot understand why his customers will not be suited, or why his enterprising neighbor takes the bulk of his trade.

The dealer who can find time to dress his window is the one who has the least time to spare for it; he makes business hum and has no dull season. His show-cases and counters show only the latest and most attractive goods; the old unsalable stock is either sold at auction or placed on a bargain table. He can't afford to lumber up valuable space with such goods. The tables and cases are regularly dusted and cleaned; the stock is constantly rearranged, so that it always looks new and fresh; his stock of staple goods is always complete, and he is not obliged to disappoint his customers with the information that he just happens to be out of the article needed. His business cards and office stationery are gotten up with great care and taste, in the best style of his art; his sample books are neat, and show the latest styles of paper, printing and stamping. To customers and strangers he is always polite, and earnest in his desire to please and to learn their wants, and they never ask a question in regard to new or old goods without receiving a satisfactory answer.

With the "fussy" customer he takes particular pains, and does not lose his temper when, after spending a half hour in showing and describing his papers, they ask for two or three sheets only, then ask for a good steel pen, which, of course, must be tried before buying, and perhaps returned the next day because it is too fine or too coarse, also with the customer who *will not* be pleased, whose loud voice, quick and sharp, can be heard in all parts of the store, denouncing everything shown as worthless, and the price as exorbitant, and if he does buy something gives him to understand that he is not satisfied with it, but has no time to go elsewhere.

To be successful it is not only necessary to have a neat and well-dressed window, but the stock must correspond, both in the arrangement and newness of designs. The live dealer should always be on the lookout for something new, and never refuse to look at samples that the traveling salesman has to show, as this is the best source of information in regard to the latest novelties, which it is necessary for him to know of, even if he does not buy.

I trust that, as I have broken the ice, some other members of the trade will come out with their ideas and suggestions on this important subject. CHARLES A. BURKHARDT.

SKILLED WORKMEN OF OTHER DAYS.

In the twentieth year of Queen Elizabeth, a blacksmith named Mark Scaliot made a lock, consisting of eleven pieces of iron, steel and brass, all of which, together with a key to it, weighed but one grain of gold. He also made a chain of gold, consisting of forty-three links, and having fastened this to the before-mentioned lock and key, he put the chain about the neck of a flea, which drew them all with ease. All these together, lock and key, chain and flea, weighed only one grain and a half. Oswaldus Norhingerus, who was more famous even than Scaliot for his minute contrivances, is said to have made sixteen hundred dishes of turned ivory, all perfect and complete in every part, yet so small, thin and slender, that all of them were included at once in a cup turned out of a peppercorn of the common size. They were almost invisible to the eye. An artist named Claudius Gallus made for Hippolytus d'Este, Cardinal of Ferrara, representations of sundry birds sitting on the tops of trees, which, by hydraulic art and secret conveyance of water through the trunks and branches of the trees, were made to sing and clap their wings; but at the sudden appearance of an owl out of a bush of the same artifice, they immediately became all mute and silent.

PRINTING ON WOOD.

A machine for printing box sides and ends, instead of stenciling, and doing the work ten times faster than can be done by hand, has been patented by Connell & Dengler, of Rochester, N. Y. It has the advantage of printing in a very rapid and clear manner all cards or trademarks much more perfectly than can be done by hand, thereby rendering it of great importance to the merchant or manufacturer. The type or form is cast in brass, and secured in such a manner that it can be easily and rapidly adjusted to print upon the board at the proper time. The inking rollers can be instantly raised from the type to prevent inking when the machine is not fed with boards. It will print boards varying from ⅛ inch to 1⅛ inches in thickness, and at the rate of 1,500 to 2,000 impressions per hour. The boards or sides of boxes are introduced to the machine in quantities of ten to twenty pieces at a time, and the bottom piece of the pile is fed by a reciprocating bar to its proper place in order to receive the impression at the proper time, the boards above dropping down to be fed in like manner until all are printed.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, October 25, 1882.

THE MONEY MARKET.—The discount rate for best mercantile notes and acceptances is 7@8 per cent., with exceptions at both higher and lower rates, though it is extremely difficult to negotiate loans of even "gilt-edge" paper below 7 per cent. The note brokers are predicting a stringent money market next month. The stock market still shows a weak tone and prices as a rule have further declined. Governments are a fraction easier, the disposition to invest in these securities having decreased with the refunding of the high interest-bearing issues into bonds bearing a low rate. Railroad mortgages are irregular and dull. Sterling exchange is a trifle lower, while Continental is dull and unchanged.

THE PAPER MARKET.—The condition of business throughout the city, jobbing and commission trade, has undergone very little change from that noted a week ago. We cannot say that the demand has improved any, but there is a continuance of that moderate, regular trade, and a steadiness in the prices of most grades which have been characteristic of the market for some weeks. While stocks in the hands of dealers are generally ample for all present demand, they are not immoderately large. The section of country in close proximity to the city has been visited with a plentiful fall of rain during the past thirty days, but portions of the country north and east of us have been less favored, and some manufacturers in those sections are now complaining of short water. If there is a continuation of this very much longer it will be an important element in sustaining the market against a decline in prices.

THE STATIONERY MARKET.—While business in the line of staples has fallen off somewhat since last week, there has been an increase of trade in holiday goods, which now constitutes the chief trade being done. Orders are not only being received by mail in considerable numbers, but out-of-town buyers are in town making purchases to quite an extent. Orders for the regular fall trade yet to come in are to complete assortments and to duplicate. Some of the fancy-goods houses report a larger trade for the season than they ever had, and there is a corroboration of this in other branches of the stationery trade. Business in most all branches of trade may be said to be conservative, the slow discount of mercantile notes and the apprehensions of a more decided stringency of the money market next month exerting a restraining influence generally. Money is said to be finding its way into the Treasury so rapidly that the problem of getting it into circulation again is not an easy one to solve. There are no new features in the prices of staples, and the market generally is firm and steady.

A NEW PROCESS OF PHOTOGRAPHIC ENGRAVING.

The following details are translated from the *Photographische Correspondenz.* The negative of a photograph is coated with yellow varnish, and the portrait etched with the needle on that ground. The yellow varnish, consisting of common negative varnish, to which a suitable quantity of aniline yellow has been added until it has assumed a dark sherry color, may be graved very well for a few days; but the older the varnish film the more brittle it becomes, and, therefore a few drops of castor-oil are added to it to render it elastic. The action of light upon sensitive paper placed beneath the negative is effectually suspended by the yellow varnish, so that only the transparent lines produced by the graver, print. When once the principle lines of the original picture have been faithfully laid down, even an untaught draughtsman may produce an engraving of the portrait that shall at least have some resemblance; while a draughtsman skilled in cross-hatching as a zylographer should furnish a work which, placed beside a good wood-cut, should exhibit a superiority recognizable even by an unprofessional eye. Besides the rapidity with which the engraving can be made, the possibility of the utmost correctness is offered, since lines which have been too deeply graved, or wrong lines, may be filled up again with yellow varnish and engraved anew; a printing frame and silvered paper offering a convenient method of watching and controlling the process. Where broken lines are desired, a pencil may be passed over them, or they may be pricked, &c. By transfer paper an impression from an engraved, yellow-varnished negative plate may be transferred to zinc, and in this way a plate suitable for printing with the letter-press printing press will be produced. A portrait of the President of the Photographic Society of Vienna was engraved in about an hour. The faultless zinc *cliche* is produced in a surprisingly short time, so that a negative, the engraving and the *cliche*, ready for printing from, may all be produced with ease in a single day.

Mrs. DORR'S LAST PRODUCTION.

"Santa Claus Souvenir."

NOT A BOOK BUT A NOVELTY FOR THE HOLIDAYS.

Something New, Rich, Neat and Novel. Each one in White Envelope; 25 in a Box.

THE reputation of the Author is sufficient to guarantee a very large sale, and Mrs. Dorr has received contributions for the Souvenir from well-known writers, among which are Paul H. Hayne, Constantine E. Brooks, E. C. Stedman, J. J. Piatt, R. H. Stoddard, Henry R. Dorr, Mrs. Mary E. Bradley and others. The above cut gives the shape (but not the size) of front cover. Size, 9¼ × 5¼ inches. Both front and back covers are Lithographed in Nine Bright Colors and Embossed, so that the cut gives but very faint ideas of the beauty of this salable novelty. The inside 12 pages, printed in two colors, on tinted paper are all cut out the shape of Santa Claus. Price of this Gem only 50 cents. White Looped Silk Fringed, with Protector, 90 cents. Sample copy mailed any DEALER on receipt of price. It is not a book, but a novelty that every Stationer, Bookseller, Fancy Goods and News Dealer can sell. We can deliver large quantities in New York City. It will sell in every State in the Union for the beauty of the work, reputation of author and popular price. Liberal Discount to Dealers. Address TUTTLE & CO., Publishers, Rutland, Vt. BAKER, PRATT & CO., New York Agents.

With every order for 100 we enclose Electrotype Cut like above free. IT HAS NO COMPETITOR.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

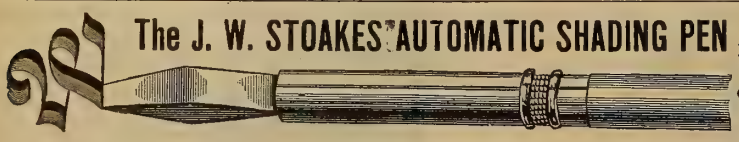
"ABROAD."

Owing to the great success of **"At Home"** last season, we have this year issued the **New Art Gift Book—"ABROAD"**—for the Holidays; to be of uniform size and a companion piece of **"At Home."**



"Abroad" far surpasses its companion both in **Decoration and Illustration.** Each page being a study in itself. The quaint little English Children are in this Book represented on a tour of pleasure through France. Those who have been "Abroad" cannot fail to recognize the beautifully executed drawings of places of interest. The appropriate verses accompanying each illustration make this work a handsome memento and Holiday Gift. Decorated by THOS. CRANE. Illustrated by ELLEN HOUGHTEN.

Price, $2.50. "AT HOME" published this year at $2.00.

HISTORY AND PROGRESS OF THE MIRROR.

(Concluded.)

The framework of mirrors, as we have seen, has undergone great modifications, and it is now no longer essential to have either gilding or woodwork. The popular appreciation of plush and velvet is shown in this branch of decoration, as well as in many more. From using these materials for lambrequins, hangings and screens, the taste has spread to their application to the framing of mirrors, which are usually square in form, but are so placed upon the wall as to appear triangular. Such glasses are beveled, and are supplied to the house decorator already framed to be ornamented by brush, pen or needle, as may be desired. The most fashionable style at present is by painting in oils, and in the majority of cases the design commenced on the frame is carried out upon the surface of the glass. We have seen such a mirror upon exhibition, the framework of which was five inches deep and covered with white velvet. Sprays of apple blossoms painted in delicate tints lay as if thrown upon the corners of the frame, and in the centre one tiny branch with leaflets and budding blossoms depended toward the centre. To paint satisfactorily upon glass it is necessary to have the design traced with a lithographic pencil and to carry it out in oils. Where plush is the material chosen to cover the frame, a stiff bristle brush is needed to stamp the color well in upon the material. Hand mirrors are now mounted in plush or velvet in preference to the carved ivory or wood frames which were popular a year ago.

Large toilet mirrors are now made with additional side mirrors, so that beauty may have no excuse for want of finish in the last details of hair dressing, &c., and the large cheval glass, which either occupies a stand alone or is inserted in the wardrobe, lends efficient aid in the accurate adjustment of tournure and train. This same setting of mirrors in furniture is also somewhat out of date, and we seldom find in the modern home the sideboard with its looking-glass back, or doors lined with mirrors. In their stead we have the exquisite carving, which will assuredly remain as a testimony to the growing art development of our age. Deep consideration abduces the belief that there is a certain magnetism in the looking-glass itself which is scarcely appreciated by us. We see its influence in every grade of human life and, to go still farther back, in the ante-human, for the monkey at Central Park has a looking-glass given him to keep him quiet. No fear of a vicious bite or a sly poke from him so long as he can survey his own charms, and as the monkey is, the future man is, for the crying child will stop the deepest wails to gaze delighted at his own reflection. St. Paul, seeking for the simile of the unreal, reminds us how the man, beholding his face in the glass, "goeth away, and straightway forgetteth what manner of man he was," and no doubt in this fact we must seek a solution of the constant need we all feel for reference to the mirror, and an excuse for the many glances necessary to our happiness.

Apart, however, from such inherent charms, the mirror is an appreciable assistance in many ways—in none more so than in the ease with which it brings objects before us which, without its aid, could only be seen by much stretching of necks and dislocation of spinal arrangements. In many of the Italian palaces, where frescoed ceilings call for the admiration of the multitude, looking-glasses are so disposed that the perfect reflection of the fresco is brought upon a level

with the eyes; a mirrored table enables the inquirer to pursue his investigation of every detail of the exquisite work without raising his eyes. Every one who has frequented picture galleries knows the value of such assistance. In secret correspondence mirrors have played an important part. Ciphers have been complicated by the need of a reflection to decipher them, and words pregnant with meaning have been unintelligible save by the use of mirrors to read them in inverted form. It is needless to dwell upon the use of the mirror as a civilizing agent, when every one knows how invariably looking-glasses are included in the cargoes sent to supplement the efforts of the missionary in the wilds of Africa and India. One firm in New York supplies such glasses in beveled frames at the rate of 50 cents a dozen, so that a savage may be rendered luxuriantly happy at the cost of 4 cents and a fraction. Nothing can give a greater idea of the extension of the trade in mirrors than this one fact, that from the same firm go forth these inexpensive mirrors by the thousands, while at the same time looking-glasses 169 x 84 inches are on hand for the decoration of the home of the millionaire.—*N. Y. Times.*

HOME DECORATION.

BY EDWARD DEWSON.

(Continued.)

It may not come amiss here to give the reader some information regarding the sizes, prices, cost of putting on, &c., of American and foreign paper. The average width of low grade paper is 18 inches—8 yards to the single roll, 16 yards the double roll. The better grades of American are from 18 to 22 wide—8 yards the to roll. English, 12 yards to the single roll. French and German paper averages 9 yards the single roll. The cheaper grades are machine-made, while the better grades are made by hand from wooden blocks, insuring thereby a much nicer result both in tone and finish, and making them, as a matter of course, more costly.

	Per roll.
Cost of machine-made goods varies from	10c. to $1.
Hand-made American " "	65c. to $15.
" English " "	40c. to $25.
" French " "	$1.75 to $25.

These are the average prices; hand-made papers, both in this country and abroad, reach much larger figures, but these are decidedly extreme, and have no place here.

The cost of putting on varies from 15c. to 50c. per roll, according to the quality of paper and the amount of labor involved. For friezes it may be useful and interesting to know the market prices, so that we may know what to depend on in making calculations for papering.

The widest is called the

Single band, and is	18	to 20	inches wide.
The Two band is	9	to 10	"
The Three Band is	6		"
The Four Band is	4½		"
The Six Band is	2⅞		"
The Eight Band is	2 3-16		"
And the last and narrowest is.	1 7-16		"

These last three are generally called "binders," and are more often used to divide the field and dado papers under or in place of the dado rail, and at the top of very low chambers. These also are divided into machine and hand made, and range in price from a few cents to $3 or $4 per yard, according to quality. In giving these sizes, prices, &c., the purpose in view is to enable the householder who may contemplate papering to figure out and calculate for himself, or nearly as possible, the cost of such work before entering into it, and not to be entirely dependent on the contractor. This result may be readily attained by measuring the wall space, deducting the openings for doors, windows, &c. Decide on the quality and price of paper to be used, and with the knowledge herein given of the length and width of rolls, cost of putting on, &c., by a little careful figuring the number of rolls needed and their cost, including putting on, may be quickly found.

These sizes and prices may be of special value to those who, in living at some distance from business centres, find it necessary to order by mail, and thus are enabled to order the number of rolls and yards of border necessary, having first decided on the quality and color by sample. It is well to order one or two rolls and a few yards of border over the exact amount needed, to have on hand in case of accident, for the styles change so rapidly that it may not be easy in a year's time to match either paper or border. In depending on the local jack-of-all-trades, as as some are obliged to, in small towns where skilled workmen cannot be readily procured, for the putting on of wall paper, special care should be taken that the old paper, if there be any, be well scraped off, and the walls properly sized, and also that the new paper is put on with "butt joints," and not with "lap joints," after the old school of ten and more years ago, otherwise the walls are disfigured by long parallel ridges, that no amount of after decoration can preclude.

Having considered the floor, walls and ceiling of our hall, we now come to the question of necessary furnishing. I say necessary, for here, of all places, we want only what is needed for use, for the hall is apt to be narrow, and we cannot afford to crowd ourselves.

The hat-rack and umbrella-stand, two or three plain chairs and a small table, will do in this case for floor furniture. On the wall a few simply framed photographs—the style of which I will speak a little later on—and a fair-sized mirror, the latter being allowable and handy for "my lady" on going out to church or call, to enable her to give a last lingering glance, and a pat here and there to bonnet, cloak or dress. This glass should be 4 feet 6 inches or 5 feet high, and about 30 inches wide, finished with a 3-inch black walnut frame, flat and plain, with an ebonized head on the outer edge. Under this should stand a small black walnut table, with simple turned legs, about 3 feet 6 inches long, 20 inches wide, and 30 inches high. This is to hold a silver card receiver, or, in place of this, a Japanese or English blue and white plate of odd shape and design, such as can be bought for 75 cents or $1, will answer the purpose nicely for holding cards, &c. A table of suitable size can be found in any well-stocked furniture establishment, and costs, in walnut, about $8 or $10. If you have one or two odd-shaped chairs, the hall is the place for them, and they need not necessarily be of the same pattern—either walnut, dark oak or ebonized wood will be in keeping.

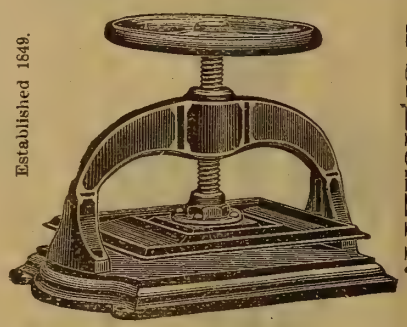
Upholstery, except it be in leather, is out of place, as the object here is dignity and not luxury; the latter quality we will reserve for our dining room and parlors.

In the selection of hall stand, we should be as simple and unobtrusive as possible—avoiding the heavy and ornate article, however tempted by the tradesman.

For pictures or frames, a few good photographs of architectural scenery, or well-known statuary, framed in cherry, mahogany, or dark oak, from ¾ to 1½ inch wide, flat and simple, with an inside molding of beaded or plain gold. I would not advise the use of mats around such subjects and treatment, unless the photo is too small to frame nicely; in that case some dark or low toned pebble paper, with a ¼-inch gold margin next the picture, may be used, taking care to harmonize well with the surroundings. If the photo be a dark one, with details sufficiently marked to warrant it, a pebble gold paper for the mat will look well, using in place of the inside gold molding one of ebonized wood. Do not, under any circumstances, use a white mat, as it will be out of all keeping with the quiet harmony of colors.

The lighting, by gas or otherwise, is the next consideration. When gas is used the prettiest and neatest way of lighting is on the newel post, the pipe being carried up through the post from the flour. When gas is not used and the dependence on oil or other mediums become necessary, the pretty modern oil lamps come nicely into place. I will suggest one or two simple arrangements, that may be found to answer the purpose very nicely.

Pretty little pottery lamps are much in use at the present time. By placing one on the top of the newel, and securing it by a simple arrangement of narrow brass straps, we make a fixture of it, and avoid accident from a chance jar or knock. Still another and more original method is a short brass rod fastened neatly to the top of the post, surmounted by a simple basket made from brass wire, in which is placed one of the pretty corrugated glass lamps of ruby, canary color or blue, that have lately come into the market. The rod and basket may be gotten up and in place by any locksmith with a taste for such things for about $5. The lamps cost $2.50, and at the added expense of $1.50 a neat duplex burner can be obtained, which adds greatly to the quality and quantity of the light. So you see how for a small sum we can have something pretty and neat, besides being a little out from the beaten track of every day experience. If more light is wanted, surely there is room on the little table for another lamp, and standing before the glass, as it will, the reflection gives added brilliancy, illuminating our hall almost as brightly as would a small chandelier.



We may well stop here, but in the interest of those who care to follow I will venture one step further, and touch on the subject of stained glass in the panels of the outside hall doors. During the warm weather the inner doors, if there is a vestibule, will be likely to stand open, both for light and ventilation, and in such a case what could be more pleasing to the eye or the senses than a glimpse of the soft harmony of blended colors, reflecting bright rays here and there, as the sunlight slants through their liquid transparency, giving a brilliant finish to the decorative harmony and a sense of fitness and completion. This feature, like the others, must be unobtrusive in design, but may be brilliant and sparkling in color if properly blended, and selected to tone and accord with the surroundings, as part of a harmonious whole.—*Builder and Woodworker.*

NEW GOODS FOR FALL TRADE.

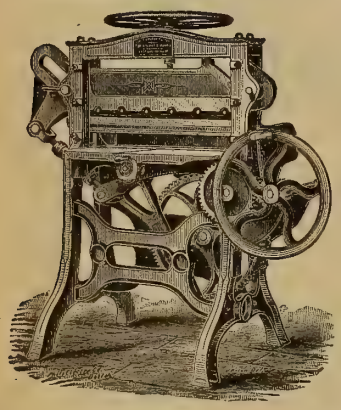
"GRAVITY" PENCIL.

SEND FOR
Catalogue and Price List.



Our assortment for Fall and Winter Trade, while comprising the usual line of STAPLES, has received many ADDITIONS in NEW Goods, that are ARTISTIC and NOVEL, and will supply the wants of the Book and Stationery Trade. Our "Gravity" Pencil (as per above cut) is the LATEST and most desirable Pencil in the market. Carrying the Artist's LARGE Lead, and working on the principle of gravitation, it is unexcelled for business purposes.

ARTIFICIAL LEATHER

Is the only substitute for Upper Leather in the world that has proved satisfactory and practical, and that cannot be distinguished from Leather. It is very durable; not affected by heat or cold; is impervious to oil or water, rendering it for many purposes superior to Leather, as those who have used it have voluntarily testified. It is made in light and heavy weights, so that it can be substituted for cheap as well as costly leather, and costs from one-third to two-thirds less, according to the kind for which it is substituted. It is made 36 and 50 inches in width, and in any color desired; also in Gold, Silver and Bronze. The attention of Bookbinders and Pocket-book Manufacturers is particularly called to this article. Samples sent and information freely given by addressing

ENGLISH HAND-MADE PAPERS

ORIGINAL EYNSFORD MILLS,

WATER-MARK:

"FELLOWS"

KENT, ENGLAND.

These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers for Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.

Proprietor: JOSEPH ARNOLD, Eynsford Mills, KENT, ENGLAND.

A NEW PHOTOGRAVING PROCESS.

A M. Garnier, a Frenchman, has added another to the many processes for photograving drawings, prints and pictures, which have been based upon the discovery of Fox Talbot thirty years ago. A description of it is published in the *Bulletin de L'Imprimerie*, to which we are indebted for the following particulars:

For outline drawings the method is more simple than for more elaborate work, where there are varying degrees of light and shade. We will assume, first, that the subject to be reproduced is a drawing of the former class.

The first thing to be done is to make a positive photograph of it. Then a sheet of copper is to be taken, and its surface is to be coated by pouring, or by means of a roller, with a solution of two grams of sugar and one gram of bichromate of ammonia, in fourteen grams of water. This coating is then equalized and dried by placing the sheet of copper on a frame, which revolves horizontally over a hot chamber or pan of coke. When the coating is dry the positlve photograph is placed upon it face down, and the whole is exposed to the sun for a minute or to the electric light for three minutes. The light will then have communicated to the coating this singular property, namely, that whereas before the action of the light the coating would retain on every part of its surface any powder dusted upon it, after such action it becomes hard in all the "white" places, and will retain powder only in those places which have been under the black parts of the photograph.

The photograph being removed, the sheet of copper is placed on a table, and the coated surface is powdered carefully with any kind of very fine powder by sifting it through a cloth. On this being done the design will at once appear by the adhesion of the powder to the parts mentioned, and when the non-adhering particles of powder are cleared off with a little cotton wool, a very distinct representation of it will be observed. M. Garnier's system of powdering was first described in his French patent of the 4th January, 1858, and was referred to again in his patent of the 10th July of the same year.

The coating on the copper-plate is, however, as yet too soft to resist acids; it must be hardened by heat. The plate is accordingly placed on a frame, and is moved about horizontally over a large flame until those rainbow hues begin to appear on the uncoated part of the plate which are always seen when copper is heated. The coating after this becomes very hard and compact in all the "white" parts, while under the powder it remains porous and permeable to acids. It is then ready to be etched.

The plate is now subjected to a mordant. That most useful for copper is the one recommended by Talbot—perchloride of iron, at a temperature of 45° Centigrade. At the end of five minutes the plate is etched.

It only remains to remove the coating which is still on the surface of the plate, and which, having been hardened by the heat, will resist ordinary washing. It is again warmed over a hot chamber or pan, and rubbed with a dentated brush dipped in a solution of potash. The copper is by this means cleared of it, and the plate is ready for use.

If it be desired to photograve a more elaborate design, such as a portrait or a landscape, the various shades are obtained by repeating the operation detailed above three times in the following manner:

The sheet of copper being prepared, and the photograph placed upon it, as above, it is left under the influence of light for some time—say four minutes under the electric light. The coating will harden where the "whites" light tints and half-shades are, and will remain porous only where the black lines are. The plate is then powdered and etched with acid; the black lines alone will appear.

Then the plate is cleaned and coated again, and placed a second time under the photograph, the last named being properly registered into the same position as before. It is now exposed again to the light, but not so long as before—say two minutes. This time the half-shades are preserved with the blacks. The plate being powdered and etched, we now have the blacks and the half-shades engraved.

For the third time the plate is similarly treated, only on this occasion it is exposed to the light for a still shorter time—one minute, for example. The whites alone will harden, and we shall get the light tints as well as the half-shades and blacks this time. By repeating the process of powdering and etching we get the whole engraving finished.

It is a feature of this process of M. Garnier's that the photograving requires no touching up. The inventor has recently reproduced by it a large collection of Rembrandt's etchings for M. Quantin, the eminent Paris printer, and the results are said to be entirely successful.—*Printers' Register.*

A Parisian novelty in ornaments are *bijoux de chasse*, consisting of brooches made of the tip of a stag's horn, ornamented with a light foliage of silver surrounding the head of a horse or stag, also in silver; from the brooch hangs a chain of pieces of horn, linked with silver, to the end of which are suspended all sorts of sporting emblems in silver, in horn and silver.

A weak man will say more then he does, a strong one will do more than he says.

THE AMERICAN INSTITUTE EXHIBITION.

The Exhibition of the American Institute is one that depends for success upon the support of the general public. It is in no sense a class exhibition, but, in fact, a large and miscellaneous bazaar well filled with an extensive collection of domestic and trade machinery and utensils, as well as furniture, works of art and fancy knick-knacks. It is not an exhibition in which any particular branch of industry or manufacture can be studied, because it is in no sense representative in any branch. It is a sort of encyclopædia, in which a variety of subjects are treated briefly, arousing an interest which must be gratified elsewhere. As a pleasant place to spend an hour or two profitably to one's self, and if the purse happens to be well filled, profitably to the exhibitors also, the exhibition commends itself. There is something to please every one. The miner can investigate rock and ore breakers; the farmer can find all kinds of agricultural machinery; the stock-raiser will find mills for grinding feed; the machinist lathes, drills, shaping machines and die presses; the builder can find wood-working machinery, and the carpenter tools; the steam yachtsman can find one or two good launches and several suitable engines; those seeking motive power for the workshop or the factory can be supplied; and if a motor is wanted for domestic purposes, hydraulic, electric and steam machines can each be investigated. The mature matron can delight herself with studying the economy that might be introduced into the household by washing and ironing machinery, and can recognize how little drudgeries could be transformed to pleasant recreation by spending a dollar for an apple parer, another for a flour sifter, each of which are so "cute" that their merits are immediately apparent. The most fastidious and æsthetic miss can engross herself with the beauties of painted tiles, plaques, perfect specimens of artificial flowers, artistic dress materials and fancy goods, and afterward can visit, with a certainty of pleasure, the art gallery of photographs and sun pictures. Those contemplating housekeeping can make their choice of furniture, both useful and ornamental. The political economist can see in the silk loom the germ of a future extensive manufacturing trade of the United States; the food reformer can listen to the laudations of whole-meal bread; the merchant can appreciate the convenience of a compact desk with an innumerable host of drawers and pigeon-holes. The youth will delight in fret saws and model engines, and children will be wild with joy when they catch a glimpse of the toys and "tally-ho" sulkies, and even the babies will cry for a ride in one of the superb carriages shown. In short, there are very few persons who would not be much gratified by a walk through the hall, and those who have the opportunity should avail themselves of it.

Brevity is a lost art; but it is the fault of time that writers and speakers cannot be brief. There is too much to say, because too many things have happened since the world started.

CARTER'S INKS.

Official Report of Awards at Exhibition, Montreal, Canada, September, 1882.

CARTER'S INKS AND MUCILAGE.—A Silver Medal, the only one given in this class; also First Prize and Four Diplomas.

STEPHEN'S (ENGLISH) INKS AND MUCILAGE.—Second Prize.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**
Each sheet is water-marked with name and date.

LOCKWOOD PRESS, 74 Duane Street, New York.

The American Stationer

A Journal Devoted to the Interests of the Stationery & Fancy Goods Trades

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. XII.---NO. 18. NEW YORK, NOVEMBER 2, 1882. WHOLE NO. 384.

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., October 31, 1882.

General trade among the stationers has been dull during the past week, but an improvement is looked for later on, or in the early part of next month. The unfavorable weather has exerted a depressing influence upon both buyers and sellers, and, perhaps, the stationers feel the effects of bad weather quicker and more seriously than dealers engaged in other departments of trade.

However, trade is not so dull as it might be. Considering that the whirlpool of politics is now attracting much attention and unsettling general trade to a considerable extent, the stationers have no fault to find. The retailers report an increasing custom, and the jobbers are beginning to have a renewal of orders. Local influences work strangely and unexpectedly here sometimes, and we have been in the midst of something of that kind.

Some of our importers are beginning to add to their stocks, preparatory to meeting the holiday trade, but it is a noticeable fact that during the past few years our importers find that they can do just about as well in New York.

The blank-book manufacturers are busily engaged, as they usually are in the last quarter of the year.

In stationers' goods some novelties have appeared. A design for an inkstand, for instance, is a brass alligator of life-size proportions; and another terrifying ornament for an elegantly appointed library table is the Zulu paperweight. The little bronze figure, quite as cleverly modeled at that more peaceful subject, the flock of sheep, is really a masterpiece, and creates a profound impression with all who see it.

Knick-knacks, this season, are of much higher order than has been seen in the past, each design having some motive for being, besides manifesting an artistic inspiration that is creditable.

Many are the choice Christmas fantasies, and many will be the possessors thereof, if all holiday signs do not fail.

The correct stationery for correspondence is a plain, square white envelope, without a mark upon it, except the address and the postage stamp. The paper, a note size sheet of unruled Irish linen, or the American imitation, which is just as good, unsized, and with just one line of lettering to relieve its pure white surface. This lettering is for use more than for ornament. This line is usually engraved, and is stamped into the paper, so as to make a raised surface, and it is generally done in Gothic or old English letter. Under this single printed line the date is written.

At the Institute Fair is an exhibit of specialty printing for souvenirs, ménus and calendars, the latest achievement being a charming little collection of views of the fair itself, daintily bound by knots of ribbon, and inclosed in artistically decorated covers.

Le Page's famous picture of "Joan of Arc" has been reproduced, and will soon be added to to this rich collection of gems.

A throng of curious people at the Institute Fair watched with interest the process of color printing, and all of the machinery and appliances used in heliotyping.

Boston is to have a new monthly magazine, eclectic in its character, called the *Periodical World*—devoted to facts, news and comments upon current periodical literature. A. H. Ralfe & Co. are to be publishers.

The writer of the humorous and satirical articles in the New York *Sun* is Edward P. Mitchell, formerly of the *Daily Advertiser* of this city.

George Cable, the Southern novelist, has been in Boston the past week.

Edmund Hudson, the new proprietor of the *Washington Capital*, is a young man, and the Washington correspondent of the Boston *Herald*.

If Mr. Alcott should pass away, Concord would still have Mr. Sanborn to continue its literary renown—Hawthorne, Thoreau and Emerson having gone.

The Comical Club had a nice time at St. Louis. One of its members told me that the St. Louis stationers are among the most active of the business men of that city, and that Boston stationers could learn something from them as to improved business methods. But I don't know what is meant by "improved business methods." The "methods" of Boston business men are pretty square, at all events. Perhaps, however, they don't give as long credit as the St. Louis stationers do. L.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, October 30, 1882.

The sensation to day is a statement in the public press that Harper & Brothers, of New York, have taken in fee simple buildings and lots fronting 110 feet front by 100 feet deep, on which they propose to erect a splendid eight-story branch publishing house, to be under the supervision of H. W. Derby, now of Columbus. The report of the use Harpers propose to make of this property is doubtless exaggerated. From the known habits and conservative policy of the Harpers, it is not supposable that they will, as it were, go into competition with themselves and divide profits by erecting a great publishing house remote from New York. What they do want here is a storage depot, chiefly for their school books, for giving out supplies promptly on short notice. Still there is room here for a great electro-stereotyping and engraving establishment, which will turn out to order the plates for the finest book work and the best commercial work. Such an establishment would find customers in the multitude of mercantile stationery establishments in this city. The fact must be confessed that, outside of certain specialties in which Cincinnati leads the world, as for instance, the Strobridge Lithographing Company, Russell & Morgan's chromo labels and playing cards, Van Antwerp, Bragg & Co.'s school books, there is an aching void in the best, the very highest and latest facilities for job printing.

It is a bitter fact that there is not an establishment here that is provided with facilities for turning out job work equal to that produced by your own, "The Lockwood Press." Nor is there means in any establishment here for supplying such facilities. Leading capitalists, skilled in this class of work, and daily reminded of the value of this field for such an enterprise, are ready and willing to testify their faith in its success, by subscribing largely for making a big stock company to start such a concern. Here is an opening for men of youth, enterprise, mechanical skill, character, energy, ability, experience, in fact all the qualities necessary to successful management. These qualities will count for money and for an interest in the enterprise.

At the Literary Club on Saturday night, Prof. James T. Hart, of Cincinnati University, read a paper complaining of the New York Custom House opening a book mailed to him, with compliments of the author, from England. The cover was torn off in New York, and the book was examined and a dollar duty was assessed on it. The Professor bounced the United States Postal Department roundly for this proceeding. He evidently forgot that the department is acting under a construction of the revenue laws made a few years ago by the Secretary of the Treasury, and that books exceeding a certain weight are dutiable when sent by mail, and are to be sent by the Postal Department to the Custom House to be examined and assessed. He forgot, also, that to professional men books are importable duty free, otherwise he might have

asserted his rights and saved his dollar. One target he missed because he didn't seem to see it. It was that, as the book was mailed to him at Cincinnati, where there is a custom house, it should have come here by mail and been referred to the Cincinnati collector of customs for adjustment of duties. The action of the New York Post-office in taking the matter in hand, instead of leaving that to the Cincinnati office, which is bound by the same rules, he might have assailed as a case of meddlesome super-officiousness.

Some years ago Robert Clarke & Co. found their sales of Bagster Bibles dropping off suddenly. On inquiry they found people were ordering them direct and saving $3 or more on tariff. They complained then to the department about letting matter through duty free when it came by mail to consumers and charging duty on it when it came by freight on the order of a dealer. So really the complaint of the Professor, if it has any grounds at all, has its foundations in our present tariff system. Indeed, he directs some blows at that system.

John Shillito & Co., the dry goods merchant princes of Cincinnati, with a stock capital of three millions, most of which is paid in, and who have long been carrying a heavy stock of furniture, housefurnishing goods, trunks, valises, staple and fancy stationery, and all manner of stationery goods, to the disgust of local stationers, come out this morning, to the dismay of old standard bookdealers, with a newspaper announcement that they have opened a holiday book department "replete with the best standard literature of the day," also "German books," and furthermore a full assortment of all descriptions of festival and holiday cards, and, finally, of Bibles, hymnals, prayer books and juveniles. What stares the legitimate trade most fiercely in the face in this proceeding is the fact that they treat these departments as side-shows to their dry goods business, and sell at the thinnest of margins.

Stewart & Co., in addition to their paper stock, keep a wide range of albums, cards and novelties, in which they have a deservedly extensive trade.

Snider & Hoole form an exception to the general rule that trade is now experiencing a lull. Like the wicked, they find no rest.

Louis Snider's Sons are driving a brisk business, considering the general quiet in business on account of the fine weather. It's the business that is generally quiet because of the quiet weather. Louis Snider's Sons are never quiet.

Samuel C. Tatum has personally a very quiet exterior, but his business won't let him have any quiet in his country room.

J. R. Mills and Billy O'Neil, of J. R. Mills & Co., are quiet talkers, but between them and their business there is an eternal hubbub. They won't let their business keep still, and their business won't let them keep still.

John Holland is up to his eyes improving and adding to the range of his styles of gold pens and pencils, and to his new, rich and numerous original designs for charms and charm pencils, and other art works in gold, silver, platinum, iridium, using iridium splendidly as a jewel.

W. B. Carpenter & Co., have put in an elevator. They have also increased their steam power and will run their new perfection perforator by steam, also all their cutters and presses.

Among recent trade visitors are Mr. Vernon, of S. & E. M. Vernon, New York; H. B. Handy, of Morgan Envelope Company, Springfield, Mass.; Mr. Sears, of Acme Stationery and Paper Company, New York; A. I. Crowell, of A. J. Holman & Co., Philadelphia; Mr. Turner, of Langfeld, Turner & Andrews, Philadelphia; A. Saunders, of Brooklyn Rubber Works, Brooklyn, N. Y.; Will F. Ponk, of W. H. Hasbrouck, New York; F. J. Patten, of Chapin Paper and Pulp Company, Springfield, Mass.

W. B. Carpenter & Co. have the agency here for Boorum & Pease, line of photograph albums. They also have the agency for the advertising chromos of Alf. Cooke, of Leeds, England.

PRINCE WILLIAM.

[NOTE.—A misprint occurred in the Cincinnati letter in THE STATIONER of October 26. It was stated that John Holland employed eight workmen. It should have read eighty.—ED.]

FALL AND WINTER STYLES IN JEWELRY.

One of the most beautiful bracelets of the season is composed of three or four very narrow bands of gold joined at intervals by simple clasps of the same. The centre stone is a lovely sapphire surrounded by small diamonds; at each side, a little distance apart, are placed two large and beautiful diamonds. This is, without exception, one of the handsomest things ever displayed.

A novelty is a nine-carat blue diamond. The tint is ice-blue and very marked. This species of stone is more valuable than the pure white gem, on account of its greater rarity. It is set as a stud, but is almost too large to be in particularly good taste.

A hair ornament takes the form of a bird of paradise. The entire surface is covered with diamonds, and the spiral hairpin, to which it is attached, gives sufficient freedom of motion to the ornament to show its beauty to the fullest extent.

A second hair ornament is even more effective than the one just mentioned. The design consists of a single flower of polished gold, the four broad petals curled slightly toward the centre; the stamens are of burnished enamel of a rich purplish color. The whole effect is good, and the yellow blossom, lacking fragrance only, is very beautiful. Stars and Marguerites of diamonds and other gems are also shown for the hair.

Next in order comes lace-pins. These are of every conceivable variety, and are always serviceable and handsome. The long bar pin is preferable to almost any other design, but some novelties in the more costly kinds are shown. One elegant design shows a solid bar of gold with a large solitaire diamond set in the centre; another has a sapphire bordered with diamonds; a third is composed of large diamonds set close together, while others yet are of a similar pattern, with the addition of a swinging fringe of smaller gems. Sometimes fancy designs are adopted, and crosses, crowns, wreaths, flowers, leaves and various other devices are displayed, but the simple bar set with one or more fine gems is the most elegant. A dainty device shows a loose-knotted bow of yellow gold set with small diamonds and sapphires, or rubies, as the wearer may desire. The effect produced by this quaint pin will be artistic and fanciful. Other bar pins are set with diamonds and similar precious stones. The style of setting and the arrangement of gems are varied in many ways, and are very beautiful.

In chatelaines there are some very rich designs in the new styles, prominent among which are the woven class, which consists of alternate woven bands of gold and silver.

Bangle bracelets are still fashionable, and some very pretty though not specially new designs are to be found in the supply of fall goods. The plain gold bands with fancy hook or clasp are still fashionable, and are very stylish in appearance. The usual floral designs are shown in pearls, turquoise, small rubies, sapphires and other stones. The serpent, coiled and diamond-eyed, is frequently seen. This seems to be a popular design, but it would not appear to be a very desirable addition to a collection of pretty things, as the majority of people have an aversion to reptiles which is too strong to be overcome by the richness of the gold or the brilliancy of the diamond eyes.

Small bands, with raised and enameled wreaths of blue forget-me-nots, are dainty and pretty, but by far the newest thing in this line is the slender rolled or plain cord bracelet, finished with two dangling balls, either plain or ornamented with precious stones.

A lovely necklace is of gold, set with pearls; but the quaintest design in necklaces consists of a collarette of solid gold, narrow at the back and widening into points at the front, after the shape and fashion of a V-shaped turn-down linen collar. The entire surface is covered with enamel in various patterns, and the whole makes one of the most curious ornaments which has been displayed in some time.

A beautiful purse is made of small gold rings, woven together after the manner of the knitted silk purses which were so fashionable a short time ago. The texture is absolutely as soft as silk, and the broad gold rings which hold it together, as well as the balls which finish the ends, are studded with small diamonds, rubies, emeralds and sapphires, making a costly and handsome purse.

A rich scarf-pin has a pinkish cameo; the setting consists of small diamonds, which are arranged in two rows. This makes a lovely pin, and accords well with the pretty things, so numerous and attractive, by which it is surmounted.—*American Jeweler.*

Surmises are not facts. Suspicions which may be unjust need not be stated.

THE PRINTING TIMES AND LITHOGRAPHER,

An Illustrated Technical and Fine-Art Journal of *Typography, Lithography, Paper-Making, and the Auxiliary Trades.*

THE NEW SERIES COMMENCED JANUARY, 1875.

THE PRINTING TIMES AND LITHOGRAPHER is a high-class journal, devoted to the Printing and Graphic Arts, in all their various forms. It derives its information from, and circulates in, all parts of the world. No pains are spared to insure the accuracy of its intelligence and to render it in every respect worthy of the support of Letterpress Printers and Lithographers, as well as Artists, Antiquaries, and Literary Men generally.

Published on the 15th of each month, 4to, in wrapper, price 6d. Annual subscription (payable in advance), 8s., post free to the United States. Rates of Subscriptions for foreign countries on application. Post-office orders to be made payable at the West Central District Post Office, High Holborn, to **WYMAN & SONS**, 74 and 75 Great Queen Street, London, W. C., England.

NATIONAL PUBLISHING COMPANY,

724, 726 & 728 Cherry Street, Philadelphia.

FAMILY AND PULPIT BIBLES.

We invite the attention of the Book Trade to the ONLY Quarto Bibles Published, containing CONTRASTED EDITIONS OF THE NEW TESTAMENT, in which the Old (King James Version) and the Revised Version are placed in parallel columns.

— ALSO —

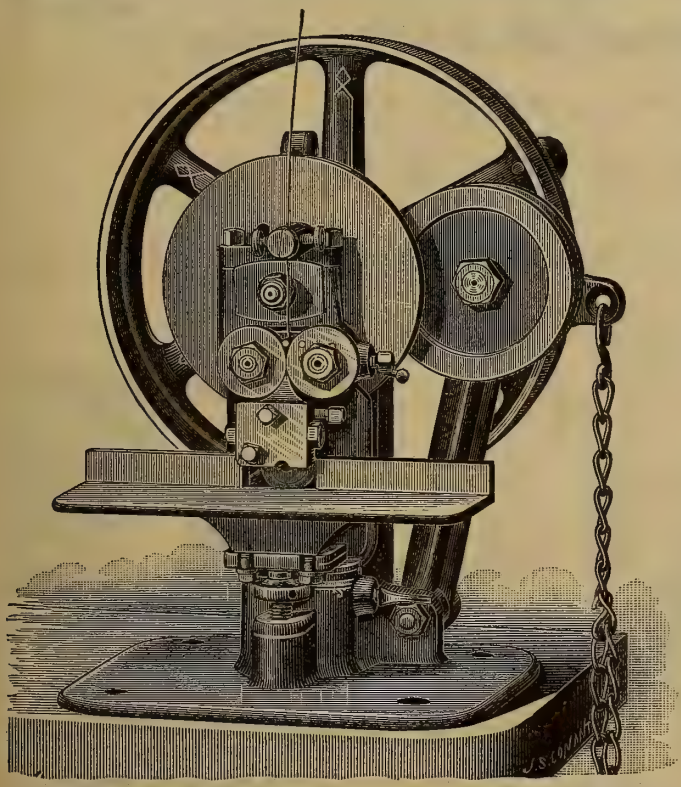
MARTIN LUTHER'S ILLUSTRATED GERMAN BIBLES,

— AND —

HAYDOCK'S APPROVED HOLY CATHOLIC BIBLES.

All of the above contain an Illustrated Bible Dictionary, Pictorial History of the Books of the Bible, Maps, Illuminated Plates and other valuable Illustrated and Descriptive Features.

We employ the most skilled workmen, use only the best materials, and guarantee better grades of paper and handsomer printing than can be found in any other Family Bible published in America, while our prices are as low as any other publisher's.



Having the largest establishment in the United States for the manufacture of Family and Pulpit Bibles, we can furnish them in great variety of new and attractive bindings and warranted first-class in every particular.

ORDER ONLY "THE NATIONAL CONTRASTED EDITION."

FOR SALE BY ALL BOOKSELLERS in the UNITED STATES and CANADA.

CATALOGUES AND TERMS FURNISHED ON APPLICATION.

BOOK-BINDERS' WIRE STITCHING MACHINE

Of Largest Capacity and Range. Power and Hand Combined.

Wire per thousand books costs but *one-third* that used by any other Stitcher.

Manufactured by CHARLES CARR,
Granite Street, South Boston, Mass., U. S. A.

1882. PAPER HANGINGS. 1883.

By way of Customary Annual to the Trade, we beg to submit that the Samples now in our Agents' hands for Fall and Spring have been selected with most scrupulous care, and after an exhaustive examination of **All New Designs** cut by Standard Factories for the season's distribution.

We claim for the product a far **Higher Degree of Excellence** than heretofore compassed by any individual House, approximating, as closely as possible, a **Perfect Assortment.** Prices being equal, the comparative merit of those lines submitted to your notice will doubtless, to a great extent, control selection.

We challenge and respectfully solicit direct comparison of our collection with those of any other Houses representing that branch of artistic industry which is our **Exclusive Specialty.**

The untiring effort of over thirty years, which has resulted in our sales being the largest recorded for the past two seasons, has also given us an intimate knowledge of the wants of that widely extended trade to which we cater. This fact, coupled with unvarying promptness and watchful care of our customers' interests, will, we feel assured, secure for us a continuance of your esteemed patronage.

Our Agent will indicate, by direct correspondence, the date of his visit. Failing receipt of such advice, Samples shall be forwarded, free of expense, upon receipt of request.

Very truly yours,

JOHN J. McGRATH,

174 & 176 State St., Chicago.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW PATENTS.

No. 265,955. Combined Cane and Fan.—William H. Fuller, Cincinnati, assignor to Mark L. Fuller, Milford, Ohio.

No. 265,985. Paper Box Basket.—Charles B. Seabury, New York, N. Y.

The combination of a box having holes in its sides, a cover having four holes, and a string passing over the cover between two of its holes and through these holes, thence through the holes in the box, and thence through the other two holes of the cover.

No. 265,986. Pin Tag.—Theodore W. Searing, New York, N. Y.

A stuck-up or embossed tag or similar article, with a flange forming a recess, into which is fitted and secured the shank and body of the fastening-pin by cement.

No. 266,053. Production of Materials for Castings, Cement, Lead Pencils, &c.—Joseph J. Sachs, Manchester, County of Lancaster, England. Patented in England September 8, 1880, No. 3,650; in France, October 23, 1880; in Austria, October 24, 1880; in Belgium, October 25, 1880; in Germany, October 25, 1880; in Italy, December 21, 1880; in India, April 9, 1881, and in Spain, April 26, 1881.

Compositions comprising sulphur and plumbago or other non-metallic substances or mixtures containing the same in substantially the proportions specified—that is to say, four parts of the former to three of the latter, or thereabout.

No. 266,064. Stylograph Fountain Pen.—Alexander M. Sutherland and Francis C. Brown, New York, N. Y., assignors to the MacKinnon Pen Company, same place.

No. 266,073. Combination Toilet Implement.—Aaron M. Austin, Rockland, Me.

No. 266,098. Protector for the Edges of Book-Covers.—Alfred L Clark, Dubuque, Iowa.

A protector for the edges of book-covers, consisting of a metal plate, to the concave surface of which is attached a metal blade, said blade being wedge shape.

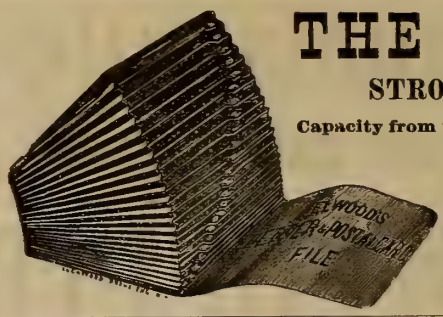
No. 266,099. Drawing-Table.—Edwin C. Cleaves, Cortland, N. Y.

No. 266,111. Inkstand.—Charles De Roberts, Albion, Neb., assignor to himself and Thomas P. Stephens, Red Oak, Iowa.

No. 266,118. Blackboard and Support.—George Elsey, Springfield, Mass.

No. 266,137. Pattern-Draft.—John La Rue Groves, Elizabeth, N. J.

The pattern-drafts are printed, have outlines varying for the same size, and base-lines and scales graduated thereon, serving as guides for producing a pattern for a standard, a stooping, or an erect form.



No. 266,168. Perforating Hand-Stamp.—George W. Le Vin, Chicago, Ill.

No. 266,169. Letter-Copying Book.—George C. Lipman, Brooklyn, N. Y.

A letter-press copying book having leaves of absorbent paper bound in at intervals with the copying leaves.

No. 266,189. Copying-Book.—James L. O'Connor, Toronto, Ontario, Can.

A copying check-book having a black impression-leaf bound substantially in the centre of the book, with the leaves numbered consecutively and correspondingly from either side of the back leaf.

THE ELWOOD FILES.

STRONGEST! CHEAPEST! BEST!

Capacity from two to four times as great as any other file made.

No. 31 Maiden Lane,

New York, 1882

To the Booksellers and Stationers

Gentlemen;

We have prepared a catalogue of specialties for the Holiday trade. It is finely illustrated, showing over one hundred choice designs, and will be forwarded to dealers, free of charge, upon receipt of their applications.

Very truly

Jno. Wilson's Sons

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

The publisher of the Hopkinsville *News*, Hopkinsville, Ky., has been burnt out.

Sinclair & Michaels, bookbinders, Stamford, Conn., have dissolved partnership.

Armstrong & Co., paper dealers, Philadelphia, Pa., have made an assignment.

F. Anderson & Son, stationers, &c., Ashton, Dak., have sold out to M. F. Scofield.

C. P. Markle, of C. P. Markle & Sons, paper manufacturers, Pittsburg, Pa., is dead.

E. A. Parsons, publisher of the *Bradford Argus*, Towanda, Pa., has been burnt out.

Murray & Ryan, publishers, Pine Bluff, Ark., have dissolved partnership. Mr. Ryan continues.

Rice & Martin, publishers, Los Angelos, Cal., have dissolved partnership. George Rice continues.

N. W. Durham, publisher of the *Oregon Tribune*, Hillsboro, Oregon, has sold out to Dr. F. A. Bailey.

The paper stock warehouse of the Graham Paper Company, St. Louis, Mo., has been burnt out; insured.

E. & H. T. Anthony & Co. have issued two new "Ideals" in indo-tints. They are charming figures of young girls and will be handsome accessions to the portfolio, and are well adapted for framing.

The Bradford, Pa., *Argus* office, together with other property, were destroyed by fire on Friday, October 27. The total loss is $10,000, partly insured. The fire is supposed to have been of incendiary origin.

The New York Silicated Book Slate Company, 191 Fulton street, manufactures silicate book slates, black diamond slating, black-boards, flexible "stone-cloth" (lapilinum) for black-boards and ivorine sheets in assorted colors. Attention is called to an advertisement in another column.

August E. Gans, upon leaving E. Jaccard Jewelry Company, of St. Louis, closed with August Gast & Co., lithographers, and is now in town placing orders in their hands which, owing to their recent fire, they cannot handle in St. Louis; office with L. de Jonge & Co., 71 and 73 Duane street.

The Post Office Department has decided that the privilege accorded publishers of second class matter, namely, to print upon wrappers of periodicals a request that "if the same be not called for in a limited time it may be delivered to any one of a class of persons named," cannot be extended to the senders of third class matter.

Roberts & Rolls, 757 Broadway, have issued a new Xmas Patience card. They have also got out two other novelties. One is the "George Washington Axe," which is not only a reminder of the "Father of his Country," but will serve to impress on youthful minds the importance of veracity. It is in the form of a hatchet and consists of chromo-lithographs mounted on wood; the handle is natural in appearance, and on the blade are two scenes in Washington's life, one of them being the cherry-tree episode. The other novelty is "Our Teddy," a first-rate portrait of a pug dog, in crayon imitation.

M. J. T. Edson, who has been secretary of the H. H. Thorp Manufacturing Company, Cleveland, Ohio, has resigned for the purpose of engaging in the manufacture of papier-maché type cases. These cases will be made by a process and with machinery invented and patented by Mr. Edson, there being three patents in all—two on the case and one on the machinery. The inventions are the result of six years' labor on Mr. Edson's part, he having conceived the idea while at the Centennial Exhibition in 1876. The difficulties in the way of reaching the end he had in view were peculiar, and had no reference to the adaptability of papier-maché for the purpose, as will be apparent to those who have seen pails and such like articles made of the same material. But Mr. Edson is satisfied that he has successfully overcome all obstacles, and can, as soon as he can get the machinery built, make a practically everlasting type case at as small or less cost than the wooden ones now in use. If this proves to be the case it will be something of a bonanza for the inventor, for he will have the whole civilized world for a market.

As some of the fall customers of McCarty & Hasberg have complained of not being informed of the firm's removal to 487 Broadway, corner of Broome street, the latter requests THE STATIONER to announce that they sent notices to that effect to the trade at the time their removal occurred, and that some of these they believe must have been mislaid. It may be here stated that the removal was noticed several times in THE STATIONER, and that the firm has been in its new quarters since January, and has now one of the finest showrooms in the city. The trade generally are invited to call and inspect its lines of holiday goods, which are said to be superior to that of any previous years. It is claimed that the assortment is the largest in the city and that the terms and prices are reasonable.

The American Tract Society has published three new series of Sunday-school cards, viz., Nos. 41, 42 and 43, or the "Overcomes" of the Bible, Words of Strength and Words of Truth. Each consists of twelve cards comprising twelve texts. They are floral designs, No. 43 representing vases with flowers and the other sprays.

The *Electrotype Journal*, A. Zeese & Co., 155 Dearborn street, Chicago, is a handsomely printed and serviceable paper. The last number contains a variety of samples of calendar work.

Spaulding Brothers & Co., paper stock dealers, Providence, R. I., have dissolved partnership, Messrs. Carpenter and Bartlette of the firm having withdrawn.

Edward Rice, picture frame dealer, Norwich, Conn., has admitted to partnership George W. Rich, under the style of Rice & Rich.

Warner Brothers, dealers in fancy goods, Georgetown, Col., have dissolved partnership. Gray Warner continues.

Wolfe & Alder, dealers in wall paper, Terre Haute, Ind., have dissolved partnership. William Alder continues.

T. M. Newell, dealer in books and stationery, Newton, Iowa, has been succeeded by E. E. Sydsay.

Anderson & Hamilton, booksellers and stationers, Mitchell, Ind., have made an assignment.

John J. Curry & Co., publishers of the *Evening Miner*, Bodie, Cal., have dissolved partnership.

Ingraham & Howard, publishers of the *Transcript*, Cincinnati, Ohio, has been attached.

Hunter Wood, publisher of the *New Era*, Hopkinsville, Ky., has been burnt out.

William Witteberg, publisher of the *Colorado Journal*, Denver, Col., has sold out.

Speer & Cummings, publishers, Macon, Ga., have sold out to John P. Boifeuillet.

J. M. Sheeder, bookseller and stationer, Demson, Tex., has made an assignment.

Lewis S. Holmes, stationer, &c., Bridgewater, Mass, has sold out to Horace E. Fox.

Mrs. McEachern, fancy goods dealer, Peterboro, Ont., has sold out to Vint & Lee.

Z. Crane, Jr., & Brother have filed a caveat for a patent on rough edge paper and envelopes.

Charles J. Cohen, Philadelphia, has just issued a revised net price list of envelopes. The trade are asked to apply for the same; it is known as No. 46.

The new cards styled the "Lights of New York," recently introduced by M. F. Tobin, have met with such favor that he is about to bring out a second edition. He has just issued two new plaques, which are neat in design and well finished. One represents a scene in the Scottish Highlands, and the other the Jeannette when caught in the ice in the Arctic regions.

John B. Davids & Co. are just issuing a new price list of their various inks and mucilage. Their patent horseshoe reservoir stand is having an increased sale and takes with the trade. This stand is modeled from the hoof of a thoroughbred horse, of which they are, when inverted, a perfect fac-simile. It is made of rich flint glass, and in point of beauty and utility is claimed to be superior to any reservoir stand heretofore produced.

On October 18 C. E. Le Bourgeois, of the Springfield City Paper Company, was in Baltimore, Md. The object of his visit was to confer with Wm. B. Walker regarding an arrangement whereby this gentleman has become the sole representative of this company for Baltimore and Southern States. Mr. Walker is the representative of some of the largest houses in the trade, and is doing an extensive business throughout the South. His headquarters are at 16 Hanover street, where samples are on exhibition.

It is, of course, the correct and proper thing to notice "Our Little Ones" as a beautiful little book for the children we love, but if the candid truth were told, probably parents find fully as much pleasure in perusing the simple tales and poems as their offspring derive. The sweet little faces depicted in the illustrations are so life-like and engaging, and the incidents are so well chosen, that it is impossible to glance through the magazine without associating every item with some little cherub known to the reader. The November number is just out.

C. Flood & Sons, St. Johns, N. B., keep on hand a large stock of stationery and fancy goods, which is said to be very complete, and contains all manner of articles necessary for an office, such as blank books, blank forms, inkstands, of which there is a large variety, and every other requisite. They also keep all the school-books, which they import direct, and a general selection of the standard authors in fact and fiction. A specialty of the firm is panel pictures and colored engravings, which include many favorite subjects. Hundreds of articles that have not been enumerated, such as pocket-books, &c., are kept in endless variety. The line of fancy goods comprises albums, card-cases, cigar-cases, portfolios, pocket-books, satchels, picture frames, easels and palettes, holly goods,

&c. The firm is pushing its wholesale trade all over the maritime provinces, and it reports a very successful business.

Henry L. Warren (formerly with A. J. Holman & Co.) is now associated with the National Publishing Company, whose advertisement will be found in another column this week. The family Bibles published by this company contain the contrasted Testaments—that is the King James and Revised versions, in parallel columns, making it exceedingly convenient to compare the two in reading. The company has issued some very handsome new designs in buildings and its large facilities are thought to be a guaranty of good work and promptness in filling orders. The trade are solicited to examine this line of Bibles before completing their purchases.

MACHINE FOR STITCHING COPY-BOOKS.

French trade journals report that a new machine for stitching copy-books has been invented by M. Auvinet, of Paris. The obstacle to the employment of book-stitching machines has hitherto been the expense of the wire, which has therefore been replaced by cotton, two pennyworth of which is sufficient to sew a thousand copy-books. M. Auvinet's system is automatic. A work girl counts the sheets, places them on the machine against a guide, where a system of rollers, furnished with twine, conducts the copy-books beneath the needle. While one book is being sewn, the girl has enough time to count a fresh number of sheets, forming a second copy-book, which she adds to the first, the latter being carried to the end of the machine, where an automatic folder, working by means of a lever, falls on the middle of the copy-book, and folds it in two. Meantime the covers are prepared, in order that they may be pasted on as soon as the sewing is finished. In this manner the sewing is quite hidden. Pasting down the covers separately is a drawback, but making allowance for this, a saving is effected by the use of the machine.

We think our civilization near its meridian, but we are yet only at the cock-crowing and the morning star.

W. B. CARPENTER & CO.,

—MANUFACTURERS OF—

Odd Sizes and Shaped ENVELOPES Only for the Trade,

THE BEST FLAT TOP DESK IN THE WORLD!

None of the various appliances we have presented for facilitating Desk labor have met with greater approval than the above. The lower sections are pivoted to the framework of the body of the Desk, which, with a touch of the hand, rotate at the will of the operator. Awkward draws and doors are thus done away with, and proper facilities afforded for the convenient classification of Books, Papers, &c. Twenty-four Pigeon-Holes in left case filled with our Patent Filing Boxes. We apply the same principle to Cylinder and other styles of desks. For particulars and prices send 3-cent stamp to THE WOOTON DESK MANUFACTURING CO., Indianapolis, Ind.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, NOVEMBER 2, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

WITH great regret we announce the death of Charles O. Chapin, whose life and services have been such as to command the respect and confidence of his fellow citizens. With personal knowledge of Mr. Chapin and his character, we share with those to whom he was dearest and nearest the sorrow which they experience, and condole with them in their grief.

ANOTHER correspondent contributes some suggestions as to "window dressing." We shall be, and we are sure that our correspondents who have so far taken up this subject will be, glad to hear from other members of the trade their opinions of the best methods for displaying goods. Any one whose ideas do not accord with those already given is at liberty to express his dissent in our columns. There are a great many young men in the trade who are capable of making suggestions, and who pride themselves on their artistic taste and discrimination. Let us hear from some of them.

MEMBERS of the paper trade are discussing the propriety of forming a club, to be located somewhere in the centre of business and where paper men and stationers most congregate. The project has been publicly broached and seems to be securing favor not only with the local trade but with manufacturers and dealers in other localities whose business frequently calls them to the city. Such a club, if formed, would always be a headquarters where friends could be met, interviews arranged, letters sent and social feeling be practised. Any one visiting the city, whether as a regular member or enjoying the rights of temporary affiliation, would feel the advantages of such a club, and to city residents the benefits would doubtless be of great convenience. The proposition is to extend the privileges to all who have to do with paper either in the raw material or the manufacture and sale of the product. Is there any suggestion that our readers would like to make concerning the formation of such a club?

AN English paper talks about "American taxes on knowledge." This is one of the empty expressions which the average free-trader attempts to force into the place of argument. The duty on books, which this windy logic is put forth to oppose, is the subject of debate, and the paper in question, admitting that Americans are second to none in their efforts to promote education, asserts that we "maintain a heavy tax upon knowledge for the sake of protecting a few booksellers and a mere handful of printers engaged in the reprinting of European books." Now, the journal which makes this statement knows very well that the reprints are not so much the things that are protected as that we propose to keep European cheap labor and foreign paper makers from getting jobs which they would take at almost any price if their work could pass our Custom House, free of duty. The tariff acts as much in the interest of the printers and paper makers of this country as it does in behalf of the publishers of reprints. International copyrights will secure the privileges of authors and publishers, and the repeal of the duty on books would be to give away everything. We don't see any reason for so doing, and the "tax upon knowledge" clamor is only a dodge. The same paper says that the United States "cannot be expected to take a foremost place in original research," and that "it must, therefore, for a considerable time, be dependent upon older countries with wealthy and leisured classes." The snobbishness of this remark is apparent. Its ignorance is amusing.

OBITUARY.

CHARLES O. CHAPIN.

The sudden death of Charles O. Chapin, of Springfield, Mass., occurred on Saturday last. He was attending the monthly meeting of the Board of Prison Commissioners of the State, of which he was a member. Being taken ill, and complaining of a sharp pain, he died within an hour after the attack. An autopsy revealed that the cause of death was heart disease. He was fifty-seven years old.

The Springfield *Republican* gives an interesting account of Mr. Chapin's career, from which the following extracts are taken:

"From boy to man Mr. Chapin had grown with Springfield, and he was so loyally and entirely identified with her interests and people that no one possessed a more complete and cordial local acquaintance. The good name and fame of the city were very dear to him, and he cherished the local memories and traditions with ardor and an almost tender care. From a bright boy who had his own way to make in the world, Mr. Chapin developed rapidly into a thorough man of affairs, and resolutely made himself an attractive and cultivated individuality. How large a place he came to fill in this community is evidenced by the universal sadness which follows upon his death. But beyond almost any other citizen of Springfield, Mr. Chapin gained the esteem of men outside of her limits, and this without the assistance of public office. His native force, good sense, large views, and power of clear and intelligent statement, led his fellow-manufacturers to make him secretary of the American Paper Makers' Association, and in that capacity he appeared in Washington and elsewhere, and became widely known and esteemed, as the accepted representative of a great industrial interest. 'There was no more popular paper maker in the country than Charles O. Chapin,' said a prominent out-of-town manufacturer on Saturday, 'it was a pleasure to do business with him.' As a man Mr. Chapin was robust and honorable, pure in life and charming in social intercourse. In controversy he was opinionated and sometimes sharply impatient, but men respected his views, and no lasting enmities grew out of his vigor of expression. We do not think it too much to claim that Mr. Chapin was the ablest living representative of our local business interests; not ablest in the success with which he garnered for himself; but in the breadth of his mind upon public questions, the capacity and disposition for studious research into economical questions. In his acquaintance at Washington and influence with leading manufacturers and public men, this quality of breadth and mental grasp gave him a prominence before all his associates now left upon the stage. As

the secretary of the Paper Makers' Association, he prepared the able and temperate statement of the paper makers' views which he read to the tariff commission at Chicago on the 1st of September, and which was printed in full in THE PAPER TRADE JOURNAL of September 16. Although he has always been identified with protection, he was no unreasoning stickler for the maintenance of the present rate of duties and was prepared to welcome a moderate and general reduction. Always alert to seize and press every new discovery and application in the industrial arts, he came home from his association with the Tariff Commission, greatly interested in an interchange of views which he had had with Commissioner Kenner of Louisiana on the practicability of using as a material for paper the fibrous residue (called bagane) from sugar-cane and sorghum, after the expression of the juice. Only last week, he secured from the Chapman sorghum mill in West Springfield a specimen of this fibre and obtained important results which he told to his friends with great satisfaction. All such improvements found in him a receptive disposition.

"Mr. Chapin came of good stock, being of the same ancestry with the late Rev. Dr. E. H. Chapin of New York. His father, Whitfield Chapin, came from Chicopee, and Charles O. Chapin was born in a house which stood on the east side of Main street, near Bridge, being one of five children. Elizabeth, the oldest, became the wife of Dr. J. G. Holland, Charles was next, then came two sisters, now Mrs. Knight and Mrs. May, and then a brother Henry. He was a pushing and earnest boy who early felt the responsibilities of life, and when the father died he became head of the family. He attended the public schools, and when G. & C. Merriam asked principal Lawton to recommend them a clerk he picked out young Chapin, who was regularly apprenticed to learn the business. Of this period Charles Merriam says: 'He did the miscellaneous work that then fell to clerks and proved a splendid boy capable and reliable, with remarkably pleasing manner, and was beloved by everybody. He remained as clerk about six years, when we went into the dictionary business, and then we organized the firm of Merriam, Chapin & Co., in which my brother and I were partners with Chapin, to carry on the bookstore, and Chapin had the entire management of it. Finally we went out altogether, Mr. Chapin took in Bridgeman, and the firm was Chapin & Bridgeman.' Mr. Chapin was raised in a Congregational family, and was known as a promising young man, and in May, 1854, made a home for himself by marrying Mrs. Norman Peck.

"In the spring of 1858 Mr. Chapin formed a partnership with H. A. Gould, under the name of Chapin & Gould, and they bought the Crescent Paper Mills, at Russell, which they have since operated. Because of the business depression at the beginning of the war, the mills were shut down for eight months in 1861; and Mr. Chapin meanwhile had a clerkship at the armory under Captain Balch, whose business it was to buy up throughout the surrounding country supplies of various kinds for army use. Mr. Chapin's warm devotion to the cause of the Union and his business judgment made him of great value in this undertaking, while in other ways he forwarded the interests of the government. Near the close of the war Messrs. Chapin & Gould, in company with the former's stepson, B. B. Peck, and H. M. Castle, started Columbia Paper Company, for buying and selling paper and paper stock, with an office on the corner of Main and Taylor streets. The concern lived about three years. Mr. Chapin also had the management of the Collins Paper Mill, at North Wilbraham, for a few years, a trust which he relinquished some twelve months ago.

"Mr. Chapin was a Whig in early life and during the war, and afterward a strong Republican. He always kept a warm interest in municipal matters, and in 1854, '56, '57 and '58 he served as clerk of the Common Council. In 1870 he ran for Mayor, but the party was defeated by the Democrats. Since then he has been more than once solicited to head the Republican municipal ticket, but steadily declined to again enter the race. This year he was the choice of many leading men for the first office in the gift of the city. The greatest direct public service which Mr. Chapin performed for Springfield was in connection with the building of the Ludlow reservoir, and as chairman of the Water Commissioners from 1873 to 1880. He was elected to take the place of Horace Smith just as the Ludlow project was taking shape, and he assumed the brunt of the work of building the reservoir in 1873, '74 and '75, being assisted by Daniel L. Harris, A. D. Briggs, George C. Fisk and Samuel W. Porter. His superintendence of this work was marked by rare fidelity and scrupulous honesty. It was a hard task, involving the expenditure of large sums of money and subjecting the commission to adverse criticism on every hand. He continued at the head of the board after the reservoir was built until that body was reorganized and brought more directly under the control of the city government. He was at the time of his death president of the Springfield and Longmeadow Railroad Company and also of the Cemetery Association. He was director of the Massachusetts Mutual Insurance Company and of the Agawam Bank, and a trustee of the Hapden Savings Bank.

"Mr. Chapin's service of some years as prison commissioner is worthy of special mention, not only as illustrating the depth of his own sympathetic nature, but as well showing the character of that service which good men and women are giving to the Commonwealth of Massachusetts. The people are told that grave abuses exist because of the State commissions, but here was a man overrun with private cares serving the public without pay or the hope of personal emolument, attending to duties which require a chapter of the General Statutes for their enumeration, and which lie among prisons and criminals. He brought to the commission business training which proved of great value, and that body suffers with us in the removal of an efficient agent for good. What Mr. Chapin personally did to aid those who needed help will never be fully known, but he was willing to suffer deception and loss, and yet ready again to lend a hand. Never a 'goody-goody' person, Charles O. Chapin was genuine and true, a man whose living made the world better. He was for many years connected with the First and South Church choirs, but has latterly attended the Episcopal Church. He leaves a widow and two sons—Charles L., who was associated with him in business, and Harry, a member of the last class at Harvard, and one daughter."

The funeral took place at the Episcopal Church, Springfield, on Tuesday. The manufacturers of Western Massachusetts, and particularly of the Connecticut Valley, were present in large numbers. Among them were Wellington Smith, Henry L. James and George S. Taylor; the State Government was represented by Lieutenant Governor Weston, Auditor Charles R. Ladd and Councillor Woods. Of the Prison Commission there were present Thomas Parsons, of Brookline, chairman; William Roberts, of Waltham; Mrs. Ellen C. Johnson, of Boston, and W. F. Spaulding, Secretary of the Board; also Mrs. Mary G. Ware and Dr. Joseph Burnett, former members of the Board; Capt. D. M. Earle, Warden of the State Prison; Capt. Daniel Russell, agent for discharged convicts; Dr. Lucy M. Hall and Miss Susan P. Harrold, Chaplain, both of the Reformatory Prison for Women; and other prominent people were Judge Soule, President Bliss and Vice President Rumrill, of the Boston and Albany Railroad; J. Willard Rice, associate of ex-Governor Rice in the firm of Rice, Kendall & Co., and Tilly Haynes, of Boston, and President L. Clark Seelye, of Smith College. The church was beautifully decorated with flowers.

ARCHIBALD G. CONSTABLE.

Archibald G. Constable, well known among the book publishers of this city, died on Wednesday, Oct. 25, at his late residence, No. 10 Lefferts place, Brooklyn, after an illness of several months. His death was the result of a complication of diseases resulting from liver troubles, which it is supposed he contracted during his service in India. For the past six weeks he has been confined to his room and unable to transact any business, though able to receive visits from his friends. He leaves a widow, who was his second wife, and two boys.

Mr. Constable was the youngest son of Archibald Constable, of Edinburgh, Scotland, who was Sir Walter Scott's publisher. He was born in London, on March 22, 1818, and his youthful days were spent in that city. After a liberal education he entered the military service of the East India Company, leaving England at the age of seventeen as a member of the Bengal Artillery, and serving in India for sixteen years. After leaving India he remained for a few years in England and Scotland, and then, about thirty years ago, came to this country and visited the Eastern cities, not remaining long in any one. At the breaking out of the civil war Mr. Constable immediately joined the army, his interest having been thoroughly aroused by the slavery question. He was a major of artillery, and also for a time was connected officially with General Schenck's department at Baltimore, and before the close of the war was offered the positions of colonel and major-general, which offices he declined. While connected with an Ohio regiment he taught ex-President Rutherford B. Hayes how to drill both before leaving for the campaign and while on the field. Soon after the termination of the war Major Constable became connected with Harper & Brothers, publishers, and remained with them up to the time of his death, occupying for some time a position as confidential clerk to the firm. He had great literary ability and was the author of a work on Afghanistan, which was published by Harper & Brothers as one of their Half-Hour Series, and also delivered several interesting lectures on India before the New York Historical Society. Major Constable took a great interest in athletic games and sports, being an expert in archery, lawn tennis, and angling, and at one time was president of the National Archery Association. He was also president of the Thomas Jefferson Club, in Brooklyn, being an old war Democrat. He had not engaged, however, in active politics of late on account of ill-health. Among the other societies he belonged to were the Long Island Rod and Gun Club, the Sons of St. George, and the Oxford Social Club, of Brooklyn, also being a member of the Masonic order. During his life in this country he made several visits to England and Scotland,

and in the latter part of 1871 was sent to India by order of the court, in charge of a Parsee merchant who became insane while visiting in this city, and who had with him, as a portion of his luggage, over $100,000 in gold. Major Constable was well known in Brooklyn society, and had hosts of friends, being a genial companion, warm-hearted and generous. All speak of him as a man of high intellectual culture and of the brightest character, always being full of life, vivacious, and sparkling over with wit, and ever ready with an anecdote. In personal appearance he was a fine-looking man, standing over six feet three inches in height, and with a well-developed, large physique. Mr. Constable's late associates met at the office of Harper & Brothers, and passed resolutions testifying to their high regard and their regret at their loss.

A new process, termed *similigravure* by its inventor, M. Charles Petit, has been brought before the French Academy of Sciences by M. Marey. The details of the process are still kept secret, but it reproduces in fac-simile the successive photographs of moving animals and apparatus taken by the instantaneous process, and hence is likely to prove valuable in the scientific applications of the camera.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, November 1, 1882.

THE MONEY MARKET.—The money market is still fairly supplied with loanable funds, and the rates remain 6@8 per cent. discount for prime mercantile paper, and 5@8 per cent. on call. The tendency, however, is toward higher rates, as currency continues to be shipped freely to the South to assist the movement of cotton. The stock market continues in an unsettled and feverish condition, with frequent but not very wide fluctuations. Government bonds continue firm but quiet, and railway mortgages dull and irregular. Sterling exchange has declined a fraction on an increased supply of cotton bills, Continental bills sympathizing to some extent.

THE PAPER MARKET.—Our city paper houses quite generally report a falling off in trade during the past week. This contraction is being experienced in most lines of general business. Various causes are assigned for it, not the least important among which, although somewhat remotely connected with dealers in paper, is a tight money market, and holding back of grain from the market for higher prices, thus tending to keep money from circulating in channels which it would otherwise reach. Most of the strong and conservative paper houses which have been accustomed to handle good qualities of paper and to keep up their prices for it, generally have all the orders they can take care of, and it is principally dealers in very common qualities, in which trade is irregular, who are in the market seeking orders. There is said to be some scarcity of tissue manillas, and prices firmly held. Straw wrappings show considerable weakness and low prices are being made.

THE STATIONERY MARKET.—Business in holiday goods has made considerable progress during the week. Large orders are being received, and, to judge from the character of the goods in quality and quantity, extraordinary preparations are being made this season, and an unusual demand is generally anticipated. In the fancy goods line a little falling off in activity has been shown in some branches, but this is only regarded as temporary, and is due to some extent to the interest taken in the coming elections, which has kept a great many buyers from the city. In some lines of staple as well as fancy goods stocks are becoming very much depleted, rendering additions necessary. Some of our houses are receiving fresh importations of new goods especially adapted to the holiday trade. Prices continue very steady and firm throughout.

THE PLIMPTON MFG. CO.

Window Dressing.

PHILADELPHIA, October 30, 1882.

To the Editor of The Stationer:

The many good suggestions made by Mr. Burkhardt, in THE STATIONER of October 26, cover the subject of window dressing exceptionally well. I scarcely know what more can be said than he has said to induce the many stationers throughout the country to try the experiment of making frequent changes and displays of new goods in their windows, unless you frequently reprint his able article; for our stationers ought to waken up in this matter. There evidently must be a demand for stationery, books and fancy articles in every city and town throughout the country.

To look at the windows of the majority of the book and stationery stores, you would become convinced that people are compelled of necessity to buy these goods, for they most assuredly are not allured by poetical fancies, beautiful symphonies, and artistic beauty, or even the suggestion of them, by the usual exhibits of goods to be seen in windows of most stationery stores.

Allow me to make a few practical suggestions concerning the arrangement of goods in a window.

Avoid, as far as possible, placing cards or note sheets flat; endeavor in some manner to have them erect, leaning against a box or placed upon a small easel. Neither crowd your window nor place things in exact rows.

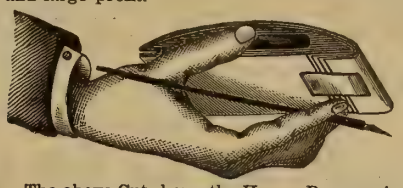
Give each article plenty of space in your window; then you do not need so much to fill up, and on the following week put in the pieces you might have displayed the previous week, had you crowded your window.

Watch the blending of colors. Never place anything pink aside of or near a red article; likewise with light blue against dark blue, or purple against blue.

If you have a large line of goods of a particularly fine character, try as far as possible to display only sample pieces either in your window or store.

Don't group together on your counter or showcases your full line. Nothing makes fine goods look more ordinary and common than an overabundance; and not only do they look less elegant when bunched together, but the beauty of one detracts from the charms of another, and your customer is puzzled to know which he likes best.

A person seldom wants more than one or two of the same articles to place in his boudoir, library or office, and consequently when an article is entirely separate from others of the same kind, its effect in the position for which your customers may intend it is more readily conceived and emphasized than when the article is brought in contact with a dozen or more of the same pattern.



Again, in dressing a window, endeavor to place goods of pronounced color near the centre and the less striking colors at the sides. As far as possible have everything erect or slightly elevated from the back, as the effect is more likely to be impressed upon the passer-by than when goods are placed perfectly flat in the window.

Always have articles in the background much more elevated than those in front, upon the principle that a high and graceful mountain pleases the eye and fills one with awe and wonder in a more marked degree than a wide stretch of flat prairie.

These are a few ideas brought to my notice from time to time, and, like Mr. Burkhardt, I would be pleased to hear from others throughout the stationery world. I. M. LOUGHEAD.

BOOK ILLUSTRATION, OLD AND NEW.

BY J. COMYNS CARR.*

It is a remarkable fact, in regard to the history of art, that the most important principles which should guide the artist in his work are commonly most clearly expressed in the earliest productions. What is called progress is very often as much a departure from such principles as the development of them, and in all periods of artistic revival there is as much to unlearn as to acquire. If we seek, for example, for the highest principles of pictorial design, we find that they are as firmly established in the work of Giotto as in the more mature achievement of Michael Angelo; and in regard to that particular branch of art which I am about to discuss, the earliest examples offer to us the best and finest models of system and style.

With such a text as book illustration, it would be easy to wander into a general consideration of the progress of design. In its widest scope, book illustration has afforded a reflex of every variety of artistic invention; and it is, indeed, difficult so to limit our view of the subject as to make it possible for discussion within the time at our disposal. But my intention is to consider book illustration less in reference to the intrinsic merit of the art that has been produced in its service than in regard to the particular conditions which should govern its expression; and here I may say at once that I do not intend to discuss in detail all the varied processes that have been from time to time employed in the adornment of printed volumes.

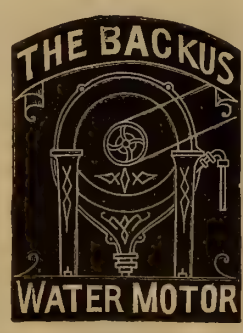
In the stricter view of what really belongs to the art, it may be said that the history of book illustration is, in fact, a history of wood engraving. It is no doubt true that, in later times, other modes of artistic expression have been employed, and many sumptuous volumes have issued from the press adorned with admirable specimens of lithography, both of monochrome and color, of photography, and of engravings on steel and copper. Such adornments, however, although they may give added interest and beauty to a printed volume, can scarcely be said to come legitimately within the scope of our subject.

The very finest steel engravings, however adroitly and tastefully they may be introduced into a printed book, have no natural right to the place which they occupy. They are like the bright petals of a flower which has been accidentally imprisoned in its pages, and the more delicate and refined the execution displayed by the engraver, the less will the result be found to harmonize with its surroundings. In order clearly to understand why this should be so, it is necessary to advert for a moment to the different mechanical conditions which govern the production of engravings on wood and steel. The principles of beauty in art are nearly always determined by simple physical laws, and the reason why there is no natural companionship between printed text and impressions from steel or copper plates, is that the processes em ployed in their production have absolutely nothing in common. I may, perhaps, be allowed to insist upon this distinction, which is no doubt already familiar to most of you, for it possesses paramount importance in connection with the subject we have to discuss. A wood block, however elaborately it may be cut, is in principle only a complex piece of type. It is printed in the same way, and by the same means, and its effects should always possess something of the same simplicity of character. You are

* Lecture before the Society of Arts.

aware that the impression of a printed page is taken from the raised surface of the type. The ink rests upon this raised surface, and is transferred, under moderate pressure, to the surface of the paper. Precisely the same description applies to the production and printing of a wood engraving. The wood block, before the artist has begun to carve his design upon it, is represented upon paper by an even surface of pure black. In order to transform this black space into a picture, the wood engraver proceeds to cut away all that he does not require for his purpose. His method is, in fact the method of the sculptor, who gradually liberates his subject from the surrounding mass of marble in which it is imprisoned, and the block, when completed, is like a piece of sculpture in relief, with this difference and qualification, that the forms have no contour or modeling, but present throughout a uniform surface, upon which the ink rests, and from which it is ultimately transferred to the paper. Now, the methods of the artist who works upon copper or steel are exactly the converse of this. If we could suppose that a copper plate could be placed upon a printing press, the impression produced from it, instead of corresponding with the artist's design, would give us everything that the artist had intended not to represent. The methods of the engraver on metal exactly correspond to the ordinary methods of an original drawing ; and that is why a painter who would be puzzled if he had to express himself on wood can, with comparative ease, produce an etching on copper. The printer's impression here tells line for line as it has been traced upon the metal. The ink, instead of resting upon the raised surfaces, rests in the furrows produced by the acid or the graver, and is transferred to the paper by means of strong pressure, in a press specially designed for the purpose. But the process here employed has nothing in common with typography. The plate has to be carefully prepared for each separate impression, and the mechanical means employed for the rapid reproduction of printed text and wood engraving are wholly inapplicable to the more delicate work of the engraver on metal.

It is remarkable that, in the earliest examples of the art, the whole page, text and picture alike, were all carved upon a block by the hand of the artist. But, before block-books were known, the taste for illustrated books had been established and cultivated by the exquisite designs to be found in illuminated manuscripts. No illustration that has since been offered to the world can equal in beauty and taste the lovely pages of illumination, where the thought and skill of the artist seem almost as much concerned with the text as with the ornament or design on which it is framed, and where the two elements are so skillfully combined as to leave the sense of the whole being a picture of which the written portions form an integral part. The authors of the illuminated manuscript fixed for ever the true principles of book illustration. The exquisite sense of fitness between the page and its picture, which belongs to the best of these early works of art, has never been surpassed, even by the most sumptuous and splendid examples of modern typography ; and so deeply were these principles of design impressed by the artist of these early times, that they were successfully transferred to the mechanical process of printing. From the illuminated manuscript to the block-book the transition is easy and natural. Here, again, the whole of the page is designed as a single picture, the balance of text and illustration is carefully adjusted, the forms of the old characters are carved with the same artistic feeling and finish that animates the illustrative design. It is remarkable that an English artist of modern times should have almost exactly reproduced this early system of book illustration. William Blake, whose instinct in all matters of decorative fitness was always true, produced several of his works, which are now so prized by collectors, by means which strictly resemble the early block-book. He understood and appreciated the beauty that comes of a perfect correspondence between the text and its adornment, and he was wont to engrave his poems upon zinc plates, biting away with acid all that was not required for the purposes of the text and the bordering design. The principle which Blake here apprehended, and which we find again in the earliest examples of book illustration, is that which is most often neglected by the modern artist. It is too common to find that the engraving inserted in the text has been executed without regard to the position in which it is to appear. The artist is apt to forget that, in the effect produced upon the eye, the text which surrounds his picture will, of necessity, have an important influence ; and he is disposed to treat his illustration as an isolated picture that has no particular connection with its surroundings.



The various modes of modern wood engraving I shall reserve for description on a future occasion ; but in considering what are the principles that should determine book illustration, it is impossible not to be struck with the constant neglect of those finer qualities of taste which are so clearly established in the very earliest specimens of the art. By this I do not mean, of course, that the block-books are the earliest extant examples of wood engraving. The block-books belong to the middle of the fifteenth century, but wood engraving had already been known and produced for some considerable period ; it was used, as we are told, in attesting documents so early as the thirteenth century ; but its first important development is found in connection with the production of playing cards by the German cardmakers in the beginning of the fifteenth century.

Power Embossing PRESS.

THIS is a powerful and simple machine, and is complete in every respect. The power can be thrown off and a break stops the bed instantly, thereby saving any covers or expensive plates from being damaged. The press is worked by a cam and toggle; the impression is regulated by bevel-cut gears on top, and the bed platen can be run up or down by hand-wheel on left side. Our new method of using steel rods makes the press much stronger than iron cast frames. It has a movable bed; can be used for steam or gas heat; is supplied with oil cups. This Embosser is strong and large enough for all regular work in a bindery.

Space between upright rods, 17 ins. Size of head, 9½ × 13½ ins.

PRICE, $375.00.

TO DYE LEATHER BLACK WITH COMPOUND OF VANADIUM.

This process is due to M. Soerensen of Sweden, and he thinks that it will make black dyeing on leather easier, cleaner, and more durable than that obtained by present methods.

The leathers to be treated by this process ought to be tanned with nut-galls, and consequently contain gallic acid or its derivatives, which gives a black color on treatment with salts of vanadium. The author admits as well known the compounds of gallic acid with which vanadium ought to produce a black dye, as well as the salts of vanadium which are commonly used for this purpose. It is of no importance what particular time after the tanning is chosen for dyeing the leather black. The dyeing is effected by simply applying over the surface a solution of suitable salt of vanadium, so that the chemical reaction may take place within the texture of the leather. Thus the author recommends as very efficacious a solution of the neutral vanadiate of ammonia, one pound in ten gallons of water. The operation should be conducted at moderate heat, which is favorable to obtaining a fine black. This process is recommended in place of currier's blacking for leathers of an open texture, as for shoes, harness, &c. It is easy to produce reserves by applying the solution of vanadium only to some particular parts of the leather, leaving the rest untouched. In saddlery a very elegant effect is produced spontaneously, owing to the circumstance that the waxed thread of the seams does not take the color, but retains its own color, and appears as a light design upon a black ground. The operator in this kind of leather dyeing does not soil his hands. There is produced a true, penetrating and durable dye in place of a mere superficial coating, which often requires renewal, and becomes lighter with time.—*Teinturier Pratique.*

WORCESTER, MASS., U.S.A.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD AND LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot. Each sheet is water-marked with name and date.**

Correspondence.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., November 6, 1882.

Business has commenced booming again all along the line. The reaction following the Exposition, having passed a lively time, has come in earnest. Dealers are happy as a lot of wild-flowers—that is, as big sunflowers, which are Oscar Wilde flowers. The crop of smiles this week is abundant, and the smiles are well developed.

In the bookselling, the paper and the stationery departments of trade there is briskness which animates one by infection. Signs of the times are that the Christmas trade in stationery of the fine-art sort will be large. The stocks here were never so beautiful, nor were they ever so large, nor were they ever in so large, early and steady demand. No off lots have any place in this market, except at rag-paper prices. Discreet dealers won't handle them.

The sale of oil paintings, of rugs, of art pottery, of plaques and bronzes, of engravings and etchings, this fall have been large and liberal. The Frederick Keppel lot of engravings now in a corner of Robert Clarke & Co.'s store, with Albert Roullier in charge, is finding ready sale. A gratifying feature is the extraordinary call for standard literature in good handsome print and binding. This is really a healthy sign of the times. Oil paintings and fine engravings sell here in Cincinnati chiefly, but they go out into the country, too, more than formerly. Standard books and fancy stationery go everywhere. They are the precursors of beautiful domestic architecture and the fine arts. It is notable that the order of growth in this part of the West seems to be in communities, solid knowledge, industrial arts, belles-lettres, refined domestic architecture, the fine arts. By the way, there is one fine art, cultivated to a higher degree in the suburbs of Cincinnati and more generally than perhaps anywhere else in this nation, and that is landscape gardening. All the other arts follow it, and where one sees a group of pretty homes, one may take it for granted that they are inhabited by consumers of fine stationery.

The visits from representatives of the trade have not been numerous during the past fortnight. Among the number here were: W. S. Stedman, of Worthington & Judd Paper Company, Holyoke, Mass.; Mr. Dickinson, of Union Paper Company, Holyoke, Mass.; W. H. Sears, of Acme Stationery Company; J. Val Koch, of Koch, Sons & Co., and O. Muller, of Nicholas Muller's Sons, New York.

There are no changes pro or con in the stationery business here, and none are in prospect except in the way of securing more factory room and better facilities. There will be a great deal of building in Cincinnati next year unless material should be too high, and stationers will do their share of this sort of work.

THE STATIONER articles and letters on fitting up show-windows are attracting attention here, where there are some pretty windows and a multitude of connoisseurs in this quasi fine art. Prince William has been interviewing several of these connoisseurs, and he here gives some of the results of this enterprise.

He asked a dealer who had fitted up his window most artistically, "How did you go about making such a show of goods in your window?" What do you think he answered? You can't guess. Why, he said, "I don't know." Prince William reflected upon the unconscious spontaneity of genius, and propounded the same query to another tradesman who had made his show-window brilliant, and got for an answer, "Why, I just fixed it and fixed till I got it right."

It occurred to Prince William that workers in the mint are seldom workers in the mine, and *vice versa*, and that if he wanted the foundation principles of arranging goods artistically he must seek men of analytical minds. So he called upon a gentleman well known as a soldier, a painter, a builder and a musician. Here he got principles. "Art is one," said the professor. "There is no such thing as fine art and art that isn't fine. Art is art, whether it be making a lady's dress or dressing her hair, whether it be sculpturing an Apollo Belvidere, or fashioning a mantle, or building a house, composing a symphony, or painting a landscape, fixing up a show-window, or making a plaque or a jug. It's all art when it satisfies the conception of the beautiful, and if it satisfies them nearly or quite perfectly, it's fine art. All men are either latent or practical artists, only they differ in degree as to this power, just as they differ in other respects."

Prince William didn't see that he was approaching anything practical in the way of getting rules for making a show-window beautiful, and he remembered that, only a short time before, the professor had in a lecture suggested that all art was one, and that out of a splendid symphony could be constructed a plan for a magnificent gothic. This tempest of profundity rather discouraged him.

Discouraged, however, but not quite overwhelmed, he repaired to a painter skilled in composition and color, and asked him. "I should think," said he, "that the application of a few principles of the art of construction and of the balancing of colors might be applied to the arrangement of a stationer's window. The display should have a foreground, as in a landscape picture. That might be made of suitable objects set on a slight slope at the bottom of the window. Then, in the arrangement of objects farther back, which must be shown vertically, reference should be had to color and light as in a landscape. Broken colors answer best. In fact, as strong, positive colors are rarely seen in masses in nature, so they should be used sparingly in the decoration of a window. Also objects which in themselves are strikingly attractive should not be used except when suitable as a centre of interest—a sort of key, as it were—to which the whole composition was to be attuned. In general, such objects kill, as it were, those that surround them, detracting from the appearance of the display as a whole, and destroy its harmony. Then, care must be used in selecting light tints for the upper part of the sky, with a belt of deeper tints for the distant hills and forests, with darker ones for the foreground shadows and solid earth, so to speak. Ingenuity might be used in passing from top to bottom, in a gradation from light to deep tones, observing at the same time a transition from warm to cool colors from the bottom to the top." This sounded as though it might be comprehensible, so Prince William stepped out and looked at Robert Clarke & Co.'s window, and he thought he saw something like the artist's principles carried out. The artist also said: "The principles of architecture hold good in dressing a show-window. In the vertical arrangement the larger pieces should not be on top, so as to give the whole a top-heavy look." Prince William asked: "But how are people who are not artists and who must fix show-windows to observe these principles of art?" The artist replied: "If they can arrange a window they are artists, and if they are artists a hint is all they will need."

Prince William observed that some of the showiest windows obtained a perspective effect by means of an interior recess five or six feet deep, and that a projecting front of large, fine plate-glass helps matters amazingly.

PRINCE WILLIAM.

To make paper which shall be luminous in the dark, it is sufficient to mingle with the pulp the following ingredients in their proportions: Water, 10 parts; pulp, 40 parts; phosphorescent powder, 10 parts; gelatine, 1 part; bichromate of potash, 1 part. The paper will also be waterproof.

PHOTO-ENGRAVING ON ZINC OR COPPER.

BY LEON VIDAL.

This process is similar in many respects to the one which was some time ago communicated to the Photographic Society of France by M. Stronbinsky, of St. Petersburg, but in a much improved and complete form. An account of it was given by M. Gobert, at the meeting of the same society, on the 2d December, 1881. The following are the details, as demonstrated by me at the meeting of the 9th of May last.

Sheets of zinc or of copper of a convenient size are carefully planished, and polished with powdered pumice stone. The sensitive mixture is composed of :

The whites of four fresh eggs beaten to a froth	100	parts
Pure bichromate of ammonia	2.50	"
Water	50	"

After this mixture has been carefully filtered through a paper filter, a few drops of ammonia are added. It will keep good for some time if well corked and preserved from exposure to the light. Even two months after being prepared I have found it to be still good ; but too large a quantity should not be prepared at a time, as it does not improve with keeping.

I find that the dry albumen of commerce will answer as well as the fresh. In that case I employ the following formula :

Dry albumen from eggs	15 to 20	parts
Water	100	"
Ammonia bichromate	2.50	"

Always add some drops of ammonia, and keep this mixture in a well-corked bottle and in a dark place.

To coat the metal plate place it on a turning table, to which it is made fast at the centre by a pneumatic holder. To assure the perfect adhesion of this holder, it is as well to wet the circular elastic ring of the holder before applying it to the metallic surface. When this is done the table may be made to rotate quickly without fear of detaching the plate by the rapidity of the movement. The plate is placed in a perfectly horizontal position, where no dust can settle on it ; the mixture is then poured on it and distributed by means of a triangular piece of soft paper, so as to cover equally all the parts of the plate. Care should be taken not to flow too much liquid over the plate, and when the latter is everywhere coated, the excess is poured off into a different vessel from that which contains the filtered mixture, or else into a filter resting on that vessel. The turning table should now be inverted so that the sensitive surface may be downward, and it is made to rotate at first slowly, afterward more rapidly, so as to make the film, which should be very thin, quite smooth and even. The whole operation should be carried out in a subdued light, as too strong a light would render insoluble the film of bichromated albumen.

When the film is equalized the plate must be detached from the turning table and placed on a cast iron or tin plate heated to not more than 40° or 50° C. A gentle heat is quite sufficient to dry the albumen quickly; a greater heat would spoil it, as it would produce coagulation. So soon as the film is dry, which will be seen by the iridescent aspect it assumes, the plate is allowed to cool to the ordinary temperature, and is then at once exposed either beneath a positive, or beneath an original drawing the lines of which have been drawn in opaque ink, so as to completely prevent the luminous rays from passing through them ; the light should only penetrate through the white or transparent ground of the drawing.

I say a *positive* because I wish to obtain an engraved plate; if I wanted to have a plate for typographic printing, I should have to take a *negative*. After exposure the plate must be at once developed, which is effected by dissolving in water those parts of the bichromated gelatine which have been protected from the action of light by the dark spaces of the cliché; these parts remain soluble, while the others have been rendered completely insoluble. If the plate were dipped in clear water it would be difficult to observe the picture coming out, especially on copper. To overcome this difficulty the water must be tinged with some aniline color ; aniline red or violet, which are soluble in water, answers the purpose very well. Enough of the dye must be dissolved in the water to give it a tolerably deep color. So soon as the plate is plunged into this liquid the albumen not acted on by light is dissolved, while the insoluble parts are colored by absorbing the dye, so that the metal is exposed in the lines against a red or violet ground, according to the color of the dye used.

When the drawing comes out quite perfect, and a complete copy of the original, the plate with the image on it is allowed to dry either of its own accord, or by submitting it to a gentle heat. So soon as it is dry it is etched, and this is done by means of a solution of perchloride of iron in alcohol. Both alcohol and iron perchloride will coagulate albumen ; their action, therefore, on the image will not be injurious, since they will harden the remaining albumen still further. But to get the full benefit of this, the alcohol and the iron perchloride must both be free from water ; it is therefore advisable to use the salt in crystals which have been thoroughly dried, and the alcohol of a strength of 95°.

The following is the formula :

Perchloride of iron, well dried	gr.	50
Alcohol at 95°		100

This solution must be carefully filtered so as to get rid of any deposit which may form, and must be preserved in a well-corked bottle, when it will keep for a long time. The plate is first coated with a varnish of bitumen of Judea on the edges (if these parts are not already covered with albumen) and on the back, so that the etching liquid can only act on the lines to be engraved. It is then placed, with the side to be engraved downwards, in a porcelain basin, into which a sufficient quantity of the solution of perchloride of iron is poured, and the liquid is kept stirred so as to renew the portion which touches the plate; but care must be taken not to touch with the brush the parts where there is albumen remaining. The length of time that the etching must be continued depends on the depth required to be given to the engraving ; generally a quarter of an hour will be found to be sufficient. Should it be thought desirable to extend the action over half an hour, the lines will be found to have been very deeply engraved. When the etching is considered to have been pushed far enough, the plate must be withdrawn from the solution, and washed in plenty of water ; it must then be forcibly rubbed with a cloth so as to remove all the albumen, and after it has been polished with a little pumice, the engraving is complete.

It will be seen that this process may be used with advantage instead of that of photo-engraving with bitumen, in cases where it is not advisable to use acids. One of my friends, Mr. Fisch, suggested the plan—which seems to deserve a careful investigation—of combining this process with that where bitumen is employed ; it would be done somewhat in the following way : The plate of metal would be first coated evenly with bitumen of Judea on the turning table, and when the bitumen is quite dry, it should be again coated with albumen in the manner as described above. In full sunlight the exposure need not exceed a minute in length ; then the plate would be laid in colored water, dried, and immersed in spirits of turpentine. The latter will dissolve the bitumen in all the parts where it has been exposed by the removal of the albumen not rendered insoluble by the action of light. But it remains to be seen whether the albumen will not be undermined in this method ; therefore, before recommending the process, it ought to be thoroughly studied. The metal is now exposed in all the parts that have to be etched, while all the other parts are protected by a layer of bitumen coated with coagulated albumen. Hence we may employ as mordant water acidulated with 3, 4, or 5 per cent. of nitric acid, according as it is required to have the plate etched with greater or less vigor.

By following the directions above given, any one wishing to adopt the process cannot fail of obtaining good results. One of its greatest advantages is that it is within the reach of every one engaged in printing operations.—*Photo News.*

EASY PROCESS FOR DEXTRINE.

Five hundred parts of potato starch are mixed with 1,500 parts of cold distilled water and eight parts of pure oxalic acid. This mixture is placed in a suitable vessel on a water-bath, and heated until a small sample tested with iodine solution does not produce the reaction of starch. When this is found to be the case the vessel is immediately removed from the water-bath, and the liquid neutralized with pure carbonate of lime. After having been left standing for two days the liquor is filtered, and the clear filtrate evaporated upon a water-bath until the mass has become quite a paste, which is removed by a spatula, and having been made into thin cakes is placed upon paper and further dried in a warm situation; 220 parts of pure dextrine are thus obtained. When needed for making mucilage, the solution has only to be evaporated to the proper thickness.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., *79 Beekman Street.*

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

THE previous success of our Cards, it is confidently expected, will be fully sustained, if not increased this season, an expectation which is already verified by the large advance orders received, justifying our increased efforts to bring out a line superior to all our previous productions. Our line will again comprise Double and Fringed Cards as well as Heavy Mounts. All the Fringed Cards will be provided with protectors, and envelopes will be furnished for all cards costing $1.80 and upward. The names of the artists who have contributed designs are a guarantee of the excellence of our Cards. We will name only the following :

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,

MISS F. BRIDGES,

ENGLISH HAND-MADE PAPERS

ORIGINAL EYNSFORD MILLS,

WATER-MARK: "FELLOWS"

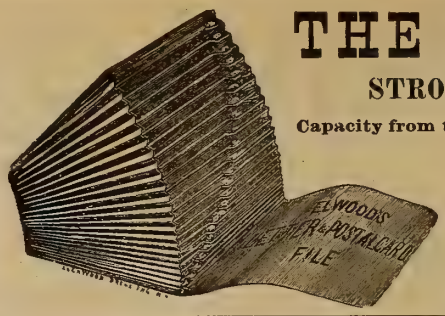
KENT, ENGLAND.

These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers

Lor Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.

Proprietor: JOSEPH ARNOLD, Eynsford Mills, KENT, ENGLAND.



THE RAILWAY POSTAL SERVICE.

The annual report of Mr. Elmer, the Second Assistant Postmaster-General, presents an exhibit of the general business of the Post Office Department which must be gratifying to the taxpayers throughout the country, convincing them that the work of this great department is at last conducted on economical and sound principles. In the railway mail transportation service the increase in mileage during the year was nearly nine thousand miles, figures that, while they may seem small in view of the rapid expansion and development of our country, yet represent a greater railway mail service than existed in the whole country in 1851. There are now more than one hundred thousand miles of mail service in operation, extending into every State and Territory in the Union, and the whole country is now filling up so rapidly that in the nature of things the demands upon the department in this branch of its administration must increase from year to year. In view of the large immediate probable increase Mr. Elmer wisely suggests that the relation of the railroads to the government in the transportation of mails should be considered by Congress at the earliest possible moment. He regards that, for the protection of the department against the rapacity of corporations, some fixed rules in regard to transportation should be adopted. While the railroads should be given a fair compensation for the service performed, the Treasury should also be protected against the extortions which the history of the department shows have been frequently practised on it. One of the most interesting features of the report is that which deals with the star service. Mr. Elmer says nothing of the frauds which were alleged to flourish under the last administration, but the figures he adduces show how outrageously rotten was the conduct of this particular branch of the service. The cost of the star service the past year was in round numbers $5,500,000. In the performance of this service the number of miles traveled over in 1882 was 76,924,867. In 1880 the number of miles traveled was 76,079,995, and the cost $7,321,499. The result shows that 853,872 more miles were traveled in 1882, and this at a less cost of $1,767,650. It may be perhaps impossible to convict the swindlers on account of the difficulty of fixing the responsibility, but the facts and figures presented by Mr. Elmer will make it exceedingly difficult for such extravagance and frauds again to occur.

TO MAKE A CARMINE.

Take 9 ozs. carbonate of soda and dissolve it in 27 quarts of rain-water, to which add 8 ozs. of citric acid. When boiling, add 1½ lbs. of best cochineal, ground fine, and boil for one and a quarter hours. Filter and set the liquor aside until cool. Then boil the clear liquor for ten minutes with 9½ ozs. of alum. Draw off, and allow the mixture to settle for two or three days. Again draw off the liquor, and wash the sediment with clear, cold, soft water, and then dry the sediment.

Not long ago a printing press was founded in Constantinople, under the patronage of Osman Bey, Second Chamberlain to the Sultan, for the purpose of reproducing the chief works of Mussulman historians and theologians, at a price that would render them accessible to the great mass of the followers of Islam. The first installment of this series, a copy of the Koran, has been already issued by the press.

John Wilson's Sons,
Importers.
No. 31 Maiden Lane,
New York, 1882

To the Booksellers and Stationers

Gentlemen;

We have prepared a catalogue of specialties for the Holiday trade. It is finely illustrated, showing over one hundred choice designs, and will be forwarded to dealers, free of charge, upon receipt of their applications.

Very truly,

John Wilson's Sons

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

E. C. White, dealer in fancy goods, Newberry, S. C., is dead.

Don A. Salyer. Valparaiso, Ind., has sold his paper mill to D. E. Simons.

Furber & Brothers, fancy goods dealer, Corinna, Me., have been burned out.

Dunn & Quinn, stationers, &c., Danville, Ill., have sold out to Patrick J. Quinn.

Davies & Woodruff, stationers, &c., Walla Walla, W. T., have dissolved partnership.

S. F. Hamilton, printer and stationer, Vine land, N. J., has been closed out by the sheriff.

Hatch & Bemis, toy dealers, North Adams, Mass., have dissolved partnership. A. J. Hatch continues.

Sellers, Hanna & Kenkle, publishers of the *Review*, Crawfordsville, Ind., have sold out to John E. Hanna.

The Mid-Continental Printing and Publishing Company, Kansas City, Mo., has been incorporated with a capital of $2,000.

J. N. L'Heureux & Co., booksellers and stationers, Lewiston, Me., have failed, and have made an offer of twenty-five cents on the dollar.

E. G. Locke & Co., Philadelphia, have issued a new sample-book of glazed and fancy papers, which they have sent to their customers. Any one in the trade will receive it on application.

McCarty & Hasberg are working until late at night to fill their orders in time. From present indications the firm expects to be busy up to the holidays.

The attention of the trade is invited to an advertisement of Henry Levy & Son in another column. It refers to the closing out of the season's holiday fancy goods. Having lately received large shipments of elegant and well-assorted designs in these goods, the firm can offer advantages to buyers who may make an early call.

J. H. Bufford's Sons have this week introduced a large and elegant line of cheap chromos, all of which are richly varnished. The house is now doing an unusually large business. And, as many of the numbers in Christmas cards are running low, it might be to the advantage of the trade to place their orders for these goods as soon as possible. The line of New Year calling cards is said to be one of the largest and rarest in the city. A special price-list for this stock will be forwarded to the trade in a few days.

The Floto Manufacturing Company has this week introduced several new plaques. Two of the designs have each a beautiful centre-piece of porcelain richly hand-painted with rare floral designs. Each centre-piece is surrounded with a deep border of corrugated satin, embellished with plush corners, the whole being surrounded with suitable fringe. Two other designs are designated "plush plaques for easels," and are strikingly pretty. The outer edges are of rich plush while the body comes in satin to match. This part of each plaque is embellished with a satin centre-piece on which is lithographed an ideal head. Both of these designs come in different shades of plush and satin, and they are meeting with a large sale.

Z. Crane, Jr., & Brother, of Dalton, are constantly getting out new designs for their elegant papeteries, which are now sought for in all parts of the country. A few years ago fashionable people would use no stationery but imported goods. The American styles and makes did not come up to what they required. Z. Crane, Jr., & Brother determined to prove that as good or better goods could be made in this country as abroad. How well they have succeeded is shown from the fact that the foreign goods are now scarcely quoted in the market, while "Crane's goods" are staple stock with every dealer of any pretensions. This firm has done much during the past two or three years to produce a taste for dead-finish papers, and to-day its brands of "Grecian Antique," "Parchment Vellum" and "Distaff" are as popular as their finest "Satin Finish" goods. Each of these brands are copyrighted, and the envelopes, which match each style and size of paper, are high-cut pattern, so that the gum cannot come in contact with the letter enclosed while sealing up.

A. J. Holman & Co., Philadelphia, are kept busy at this season to meet the demand for their photograph albums. In their line of plush bindings the call is especially brisk, and they are turning out some elegant goods of this description which they claim are superior in the quality of plush used and in their general make-up to foreign goods of this class, while much lower priced. Their revised price-list has just been issued, and will be sent to the trade on application. Dealers who desire these goods for their holiday trade should send in their orders at once, to insure their being filled in season. In family and pulpit bibles Holman & Co. are recognized as leading publishers in this country. Their line is well known, with the exception of their imperial red-line edition, which is new this season, and which is the first effort in this direction in America. These books are printed from entirely new plates, and are beautiful specimens of typographical work, fully equal to London and Oxford editions.

George McDowell & Co., Philadelphia, have taken into their employ Samuel Simons, who was until recently associated with C. Sherman & Co., and for many years with the old house of John Gladding & Son. Mr. Simons, who is very popular in the trade, will start on the road about January, 1883. Meanwhile his old friends will find him in the store ready to look after their commands. In addition to a splendid line of blank-books he can interest them in staple and imported stationery, which includes many novelties for holiday sales, in which George McDowell & Co. have an excellent assortment.

George B. Hurd & Co., this city, have got out a new line of hand-made paper, octavo size, and known as "Ancient Note." This is a very nice paper, fashionable in the style of sheet and envelope, and is altogether *comme il faut.*

C. M. Horner, of the firm of Horner, Rhoades & Hobbs, dealers in notions, Kansas City, Mo., is dead, and not C. M. Hubbs, as previously reported.

Lynch & Thornton, stationers, &c., Atlanta, Ga., have dissolved partnership. M. Lynch & Son succeed.

Harding & Clay, publishers of *The Miner's News*, Hailey, Idaho, have dissolved partnership.

Schultz & Harrington, lithographic printers, Boston, Mass., have been damaged by fire.

C. E. Kirkpatrick, news dealer, &c., Anna, Ill., has sold out to H. Stock.

N. Ure, of N. Ure & Co., books and stationery, Toronto, Ont., is dead.

Alexander B. Walsh, of J. W. Bond & Co., Baltimore, Md., is in town.

J. W. Barnhart, of Watkins & Barnhart, publishers of the *Democrat*, Lincoln, Neb., has sold his interest to A. J. Sawyer.

T. B. Lippincott & Co., Philadelphia, have this year a very extensive assortment of fancy goods, which includes photograph albums in great variety; American and imported Christmas cards of the best manufacturers; cigar cases, comb and brush sets, dressing-cases, and fine leather goods of every kind; games, inkstands, mirrors, nail sets, opera glasses and papeteries, manufactured in this country or in Europe. All of these are exhibited in the spacious store of the firm, which, at this time of the year, is always crowded with buyers.

A pretty and nicely conceived card souvenir is the "Longfellow." It has a portrait of the poet in a medallion, with a fac-simile of his autograph. On either side of the medallion are quotations from the "Village Blacksmith" and "Hanging of the Crane," and at the upper corners of the card are handsomely lithographed views, one being that of a village smithy, reproduced from a drawing by Mr. Longfellow's own hand, and the other that of a wide-mouthed chimney with the old-fashioned crane swung within it. The token is chaste and well executed in colors, and is likely to find favor.

ETCHING FOR COPPER-PLATE PRINTING.

Etching is a method of working upon copper, zinc or other surfaces, by which the lines of a picture or other figure are "bitten" or eaten into the surface by the action of acid instead of being engraved by the needle. The art seems to have been revived to a considerable extent during the past few years. This fact is partly attributable to the freedom attainable in a drawing done by this method, especially as contrasted with one produced in the mechanical manner of line engraving, and also to the scarcity at the present time of competent engravers in the other line of art.

In etching, a metallic plate is first coated with a waxen surface, which resists the action of acids. The lines intended to form the picture are then pierced through the wax with a pointed instrument and afterward eaten or "bitten" into the metal by the application of acids.

Plates may be either bitten in by immersion in hydrochloric or nitric acid solution, or by galvanic agency. The following description of the process is extracted from a lecture by Seymour Haden, one of the most celebrated etchers of the present day. Mr. Haden divides the methods of etching into two, which he terms the ordinary or interrupted, and the "continuous" processes; the latter being his own invention. He says:

"In the ordinary process the results are produced by first drawing the whole of the desired object on a metal plate previously protected by a resinous coating, taking care that the needle does not wound the copper; then removing portions of the copper so laid bare by an acid capable of biting, usually hydrochloric acid. This may be called the 'interrupted' method, as contra-distinguished from mine, which I call the 'continuous' method, and which consists of drawing in and biting at one and the same time.

"The 'interrupted' process takes place thus: The drawing upon the plate is made in its entirety with lines of equal thickness, the strokes in the extreme distance being of equal thickness to those in the foreground; the plate is then placed in the mordant bath, and when one part, say the extreme distance, is thought to be suffi-

ciently bitten, it is taken out of the bath and protected from further biting by a coating of varnish of Brunswick black, and so on by interrupted bitings until those parts which require to be most enforced are bitten sufficiently. It will be apparent what a delicate and hazardous process this is.

"The 'continuous' process is the entire reverse of this. The plate is inserted in a glass bath, with four bits of wax in each corner of the bottom to fix it; and the whole etching is done, or can be done, without removing the plate from the bath. The lines which require to be the broadest and deepest are drawn in first, and so are longest subject to the action of the mordant; these generally represent the foreground; then the middle, then the extreme distance, and lastly, the sky is drawn. Thus the picture is carried through in successive planes, and a gradation of valves and ærial perspective is obtained by the action of the mordant. It will never be found difficult to draw in the mordant in the open air or in an ordinary lighted room.

"Opinions differ as to what is the best metal on which to etch. Steel is never used by etchers; it is entirely an engraver's material. It makes too strong and wiry a line for etchers. Copper is generally used, but zinc is to be preferred. Copper is sometimes soft, sometimes hard, and this very materially affects the execution, the biting in, and the endurance of the plate. An etching on copper is perhaps more delicate and refined, but one on zinc gives a more painter-like and artistic impression, is richer in color, and is bolder; it has, besides, the advantage of being more easily bitten.

"Then as to the mordants. The following are what I recommend:

FOR COPPER.

(*a*) Nitrous acid.....	33⅓	(*b*) Hydrochloric acid	20
Water.....	66⅔	Chlorate of potash	3
		Water.....	77
	100		100

"1. Dissolve the chlorate of potash in 38 parts of boiling water. 2. Mix the hydrochloric acid with the remaining 39 parts of cold water. 3. Add the two solutions together.

FOR ZINC.

(*a*) Nitric acid.....	25	(*b*) Hydrochloric acid..	10
Water.....	75	Chlorate of potash.	2
		Water	88
Total.....	100	Total.....	100

"Make the solution as for copper.

"The biting-pin of the etching is, though it may be hardly thought so, the most important part of the whole process! It corresponds to the painting of the picture—on it depends all the color and effect of the work. It is astonishing how few of our etchers possess the two essentials to a good etching—the power of drawing and biting-pin!"

A battery may, however, be employed for biting the etched copper, in lieu of the foregoing processes. Smee says that the great advantages of biting the plates by the battery process are "the absence of poisonous nitrous fumes which are evolved in the ordinary process; the greater uniformity of action which takes place than when acids are used; and the rapidity of biting, which may be regulated to the greatest nicety. The lines may be of any depth, and are sharper and cleaner; and, lastly, no bubbles are evolved, which the engraver well knows are apt to tear up the ground, or to cause unequal action."

A copper plate with a highly prepared surface is covered with engraver's varnish, or a composition made of asphalte, wax, pitch, and Burgundy pitch. The design is made with an etching-point through the composition, so as to expose the surface of the metal. The plate must be connected with the positive wire and the circuit thus completed. The solution should be made with sulphate of copper, or dilute sulphuric acid, a second plate of copper being used for the negative pole. The oxygen and acid set free on the surface of the plate will quickly eat into those portions laid bare by the etching tool.

In a short time, say ten minutes, the fine work will have been attacked sufficiently, and these parts of the plate must be stopped out with the varnish to prevent further action. The various gradations of shades are treated in the same manner. When the plate is finished it should be taken out, and the varnish taken from the surface, when it is ready for use. It is obvious that this method is open to the same objections as those alleged against the interrupted method by Mr. Haden.

Another process of reproducing a drawing for printing is the following, which we take from a paper by M. G. Derincenzi, in Roret's Manual on "Galvanoplastie." In this method a plate of zinc is employed instead of copper. The plate is first grained by fine sand in a similar manner as the lithographic stone is prepared for the artist. The drawing is made upon the grained surface with specially prepared ink and crayons. When the drawing is completed it is gummed, rolled up, and etched in the same manner as a lithograph is treated by the printer. After washing it out with turpentine it is finally rolled up in varnish, when it is ready for the immersion in the battery.

For the rolling up, Brunswick black is used, together with a little essence of lavender.

When the varnish is dry the plate is put into a solution of sulphate of copper, together with a sheet of copper. A Voltaic pair is formed by the circuit being completed with copper wire. Those portions of the zinc plate uncovered by the composition are eaten away, the depth being regulated by the time the plate is allowed to remain in the solution. M. Derincenzi considers four or five minutes sufficient for chalk work, and from seven to ten minutes for ink.

By this simple process the most delicate drawings may be reproduced, as the acid is powerless to attack any portion of the plate covered hy the varnish.

This method is capable of being extensively used in a variety of ways, as a transfer may be made in the ordinary method, either from the stone, a wood block, or even from a page of type, upon the zinc, and treated in the above manner. Although, doubtless, a very useful and simple process, we cannot altogether agree with the author that it will supersede ordinary stereotyping. He says: "According to this process the pages of a book may be transferred upon very thin zinc plates, and from these to more substantial plates, which may be etched every time a reprint is necessary. The plate upon which the original transfer is made costs but little more than a proof pulled on good paper."

Of course this process may be applied to the fac-simile reproduction of old works, by means of photography.—*Printing Times and Lithographer.*

FOLEY'S PAT. IMPROVED STYLOGRAPHIC PEN.

Great reduction in price: No. 1, $1.75; No. 2, $2.50; No. 3, $2 50; No. 4, $3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, NOVEMBER 9, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THE Cincinnati correspondent for THE STATIONER presents some thoughts on window dressing which deserve consideration.

Now that election distractions are over, we expect that trade will take its turn at making all of the excitement necessary to sustain interest in things mundane. There will be enough of it to keep men busy.

AN English contemporary has struck upon an obvious swindle. Somebody has been writing under various names from Cape Coast inviting different English manufacturing stationers to send samples, and in some instances small consignments of goods, for which a return in gold dust, ivory, &c., is promised. About fourteen fictitious firm-names are used, and the character of the communications ought to suggest swindling to any merchant who might receive one of them. We think that we might be able to tell —without knowing the individual—the nationality of the swindler. Has any American house received like communications?

IT is stated that the Postmaster-General intends to suggest a reduction in letter postage by reducing the price of stamped envelopes to the cost of the adhesive stamp, and that he has not yet decided to recommend two-cent postage. This is getting things crooked. What the country wants is two-cent letter postage, pure and simple. The stamped envelope may be a convenience to many people under certain conditions, but it certainly is not as useful to the masses, who would not profit by Mr. Howe's suggestion. Such a postal change would be a weak attempt to defer to popular demands and be only a seeming show of cheap postage. If, as asserted, Mr. Howe claims that stamped envelopes will insure delivery in cases where letters are not fully prepaid, we are of opinion that our Postmaster-General wants some one to take him to one side and teach him his business. If people need stamped envelopes why should they not buy such envelopes as they may choose and have them stamped by the government to order, as in the case of bank checks?

GERMAN paper makers have again been considering the subject of extending their export trade, and at least one branch of the paper-making industry in Germany has decided to form a confederation of manufacturers for the purpose of extending the sale of German papers in different countries. This plan, which is only a repetition of the scheme at one time put into operation here, promises to be more systematic in its method, and will probably result, if carried out as proposed, in greatly extending the sale of the German product. While other countries are thus taking effective steps for controlling markets which are as open to our enterprise as to theirs, the American trade look with seeming unconcern upon their movements, and apparently are not averse to allowing the trade of the world to go by default. We are ashamed of the indifference which our manufacturers exhibit. It is extraordinary in the face of the admitted fact that we must find a market for our surplus products. How long shall this indifference last?

CRANESVILLE LIBRARY.

The well-known generosity of Z. Crane, Jr., and W. M. Crane has found practical expression in the erection near their mill of an elegant library and Lyceum building for the use of their employees and neighbors. It is a Gothic structure, two stories high, size 24x36 feet, and is heated by furnace in basement, and lighted by gas throughout. It cost upward of $2,000. The building contains an elegant reading-room, with smoking-room on the second floor, wash-room, toilet-room, &c.

This generous gift is highly appreciated by those whom it is intended to benefit, and cannot fail to have a good effect on their morals and intelligence.

OBITUARY.

JAMES W. SIMONTON.

James W. Simonton died suddenly from heart disease, at Napa, Cal., on Thursday, November 2. He was one of the best-known journalists in this country, and was for many years the General Agent of the Associated Press, with headquarters in this city. Mr. Simonton was a native of Columbia County, in this State, where he was born in 1824. He received his education in the public schools of this city, and when twenty-one years of age began his journalistic career as a law reporter and subsequently as a general reporter on the *Courier and Inquirer*. He subsequently went to Washington as a Congressional reporter for that paper. While acting in that capacity he became interested in the San Francisco *Courier*, and in 1850 went to California and was one of the editors of that journal for a year. In 1851, when the New York *Times* was started, Mr. Simonton left California and came to this city, to accept a position on the editorial staff of the new paper. For seven years he was the Washington correspondent of the *Times*, and during his term of service at the capital was instrumental in exposing a number of cases of bribery and corruption among the members of Congress. The most noteworthy of these was the exposure of the clique interested in the Pacific Railroad land grabs. Because of his allegation that members of Congress were interested in the scheme he was brought before the bar of the House, January 21, 1857. Refusing to give the sources of his information, he was held in custody until the adjournment of Congress, being held to be in contempt of the House. In 1859 he became in-

terested in the San Francisco *Evening Bulletin* as one of its editors and proprietors, and served during the war of the rebellion as its correspondent at the front. In 1866 he became the general agent of the Associated Press, still retaining his connection with the San Francisco *Bulletin*, the publishers of which, in 1869, acquired possession also of the *Morning Call* of that city. Mr. Simonton remained the general agent of the Associated Press until 1881, when he retired and again went to California, purchasing the Theodore Winter estate, a large tract of land in the Sacramento Valley. To the management of this extensive farm and vineyard, for which Mr. Simonton is said to have paid over $60,000, he has devoted his energies since his return to California. He was also interested in a number of mining enterprises. He was understood to be in the enjoyment of perfect health, and his sudden death was a great surprise to his many friends in this city.

While acting as agent of the Associated Press, Mr. Simonton resided on the Terrace, at New Brighton, Staten Island, and the circle of his intimate friends there was a large and influential one. He was a man of great energy and perseverance as well as of genial social qualities. He was a ready writer, and known, when in active journalistic work, as an exceptionally good descriptive writer. He had also the faculty of sharp, incisive writing in a marked degree, which made him especially obnoxious to such as deserved and received castigation from his pen. While connected with the Associated Press he lectured in various cities of the country on "The Associated Press; or, How We Get the News." In politics Mr. Simonton was originally a Free-Soil Whig, and acted with the Republican party from its foundation. Mr. Simonton leaves a widow, his second wife, in California, and three children, the latter residents of this city—Frank L. Simonton, contracting agent of the Chesapeake and Ohio Railroad Company, W. J. Simonton, and a daughter, the wife of Adolph Flamant. Mr. Simonton's mother also survives him, and resides in this city. Arrangements for the funeral are not yet fully perfected, but it is probable that the body will be brought to this city for final interment.

INDIAN INK.

Maurice Jametal has compiled, from native sources, a monograph upon Indian, or rather Chinese, ink. M. Jametal, following Chinese historians, attributes the invention of ink to Tien-Tchen, who lived between 2697 and 2597 B. C. At this time, the ink used by the Chinese was a kind of lacquer, which was spread upon silk with bamboo sticks. Afterward, some kind of black stone, to which water was applied, was employed, and finally, about two centuries and a half before the Christian era, in the province of Kiang Si, they began to make balls of lampblack, obtained by burning a mixture of lacquer, firwood and size. The new ink soon found favor, the older fashion died out, and the province had the distinguished satisfaction of having its industry supervised by an official of the Imperial Court, and of sending an annual tribute of ink for the special use of the emperors of the Tang dynasty. Toward the close of the sway of that family, lived an ink-maker, whose name, Li-Ting Kouei, is still remembered with admiration. For the production of the lamp-black of "Indian ink," various methods have been employed, but firwood has generally been used in combination with various oily substances. The best ink is said to have an aromatic flavor, and this, we are told, leads some persons to drink it dissolved in water. It has been suspected that some part of the Chinese processes now used have come from Corea, if, indeed, that it is not the real birthplace of the industry.

ORIENTAL MANUSCRIPTS.

The trustees of the British Museum have recently acquired a most important collection of Oriental manuscripts, consisting of 138 volumes, more or less fragmentary, containing—1. Arabic commentaries on the Bible, with the Hebrew text written by Karaite Jews. 2. Liturgies and hymns, both of the Karaites and the Rabbinic Jews. 3. Karaite polemical treatise. 4. Grammatical, lexicographical and philosophical treatises. Among the commentaries on the Hebrew text are some of the highest importance, ranking among the oldest manuscripts hitherto known. Besides being of so early a date, these manuscripts show the cause of the law laid down in the Talmud, "that the sacred Scripture must not be written in anything but the square Hebrew characters." They demonstrate for the first time that the Jews were in the habit of writing the Scriptures in other characters. Another point of extreme interest to the Oriental student is the fact that, though the commentaries are written in Arabic, they contain large quotations from Anan's commentaries in Aramaic, thus proving beyond doubt that Anan, the founder of the Karaites, wrote in Aramaic—the language spoken in Palestine in the time of Christ.

IMPROVEMENTS IN CHROMO-LITHOGRAPHIC PRINTS.

Several interesting improvements in chromolithography, and in the production by its means of imitations of oil paintings and water-colors, such as chromos, oleographs, &c., have been invented by S. Czeiger, of Vienna.

According to the method hitherto employed, as is well known, each stone is prepared by making drawings upon it with chalk or with a pen, which are then etched by a well-known process. By this invention a great part of the manual labor is done away with, as for the preparation of the stones a transfer paper is used, upon which are printed a series of equidistant parallel lines which are transferred to certain parts of each stone as hereinafter described.

In this process, as in the method hitherto employed, a separate stone is used for every color that has to be printed, and on each stone are impressed the outlines of the design to be produced. Those parts of each stone which are not needed in the printing are then covered with a coating, consisting of a mixture of vermilion with dissolved gum arabic (about five parts vermilion to ninety-five parts gum solution), and on to the stone thus prepared are transferred the lines printed upon the transfer paper. The stone, upon which the lines only take effect at those parts which were not covered with the coating, is then washed clean with water, and there only remains on the parts a series of parallel lines suitable for producing the lighter shades of coloring.

At those parts on the series of parallel lines where more color is required, that is to say where it is desired to obtain a darker shade, after the stone has again been prepared with the same gum solution, other parallel lines are printed, but in such a way that a simple intercrossing of the lines is obtained.

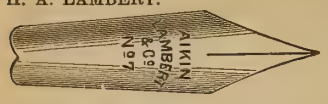
Again, on those particular parts of the simple intercrossing where it is desired to get a still darker shade the lines are again impressed in a similar manner, whereby a double intercrossing is obtained. If desired, by means of further impression of the lines upon particular parts of the double intercrossing, a threefold intercrossing, and so on, may be obtained. By further intercrossing of the lines all the modulations of shades of color which are to be printed with the particular stone can thus be produced.

After the stone has been thus prepared, it is etched with a somewhat stronger etching solution than has hitherto been used for the purpose, and the stone is thus made ready for printing. It must not, however, be etched until all the lines and intercrossings are impressed upon it, which are necessary for the production of the different shades of color which are to be printed with that alone. Instead of parallel lines being printed upon the transfer paper, it may be provided with lines which cross each other once or several times, and, if desired, lines may be used which instead of intercrossing lie closer to one another, so as to produce by the impression the different shades required.

The new process certainly seems deserving of a trial, for there is the outline of an idea which might, probably, be usefully developed.—*British and Colonial Printer and Stationer.*

To Make Copying Inks.—Dissolve in a pint and a half of writing ink (violet or any other color) an ounce of lump sugar or sugar candy. A copying ink, so slow drying that writing in it can be copied by the use of no greater pressure than the hand can produce when passed over a sheet of paper, may be made by boiling away nearly half of some ordinary writing fluid and then adding as much glycerine.

Market Review.



Office of the American Stationer,
Wednesday, November 8, 1882.

THE MONEY MARKET.—The local money market is stringent, the supply of loanable funds being comparatively light and the demand brisk. The rates for call loans vary from 6 to 10 per cent., and these figures also represent the discount rates of prime mercantile paper. The stock market has been very dull, and quite devoid of new or interesting features. The fluctuation in prices, with few exceptions, has been in favor of the "bulls." Government bonds were firm, and railroad bonds were dull and steady, but with the changes in prices only fractional. Foreign exchange is quiet and steady.

THE PAPER MARKET.—Business in the paper trade among the city dealers has not improved since our last, and the distributive movement, as a whole, is not equal to the usual average at this time of the year. The closing of inland navigation has compelled manufacturers, having orders to fill for the West, to exert themselves to execute them in time, and considerable shipments have gone forward this week for this reason. In the line of Fine Papers, Loft-Dried Writings are particularly firm and steady in demand. While News and Machine Finished Book Papers are not very strong in price, they still retain the steady position in value they have held for some time and show no further decline. Manilla Wrappings are irregular and weak, and very low prices are ruling.

THE STATIONERY MARKET.—Although business has been somewhat interrupted this week by the elections, trade keeps up to very good proportions. Mail orders continue very large, and there is a fair number of out-of-town buyers in the city who are ordering goods quite liberally to meet the wants of the holiday trade. Orders for Christmas and New Year cards are being received on a very large scale, and out of the large variety of designs offering, and with the sharp competition existing for trade, buyers cannot fail to be suited. The fancy-goods houses are most of them doing a very active business, and the toy trade is beginning to show considerable activity, and large stocks of goods, embracing the two lines are being sold. There is a steady trade in staples, and prices continue firm.

1882. PAPER HANGINGS. 1883.

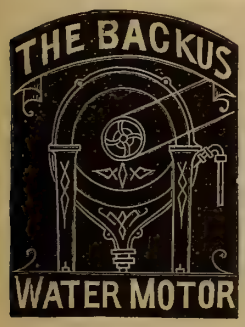
By way of Customary Annual to the Trade, we beg to submit that the Samples now in our Agents' hands for Fall and Spring have been selected with most scrupulous care, and after an exhaustive examination of **All New Designs** cut by Standard Factories for the season's distribution.

We claim for the product a far **Higher Degree of Excellence** than heretofore compassed by any individual House, approximating, as closely as possible, a **Perfect Assortment.** Prices being equal, the comparative merit of those lines submitted to your notice will doubtless, to a great extent, control selection.

We challenge and respectfully solicit direct comparison of our collection with those of any other Houses representing that branch of artistic industry which is our **Exclusive Specialty.**

The untiring effort of over thirty years, which has resulted in our sales being the largest recorded for the past two seasons, has also given us an intimate knowledge of the wants of that widely extended trade to which we cater. This fact, coupled with unvarying promptness and watchful care of our customers' interests, will, we feel assured, secure for us a continuance of your esteemed patronage.

Our Agent will indicate, by direct correspondence, the date of his visit. Failing receipt of such advice, Samples shall be forwarded, free of expense, upon receipt of request.



Very truly yours,

JOHN J. McGRATH,

174 & 176 State St., Chicago.

COPYING PAPER.

The following is communicated to the *Polytech. Notizblatt* by E. Dieterich, in regard to the method he employs for making the copying paper which has obtained so good a reputation in Germany. The manufacture may be divided into two parts, viz., the production of the color and the application of the same to the paper. For blue paper, Dieterich uses exclusively the blue color known as "Paris blue," as covering better than any other mineral color. Ten kilogs. of this color are coarsely powdered and mixed with 20 kilogs. of ordinary olive oil; 0.25 kilog. of glycerine is then added. This mixture is, for a week, exposed in a drying room to a temperature of 40° to 50° Centigrade, and then ground as fine as possible in a paint mill. The glycerine softens the hard paint, and tends to make it more easily diffusible. Then Dieterich melted 0.5 kilog. of yellow wax with 7.5 kilogs. of ligroine, and added to this 3 kilogs. of the blue mixture, mixing slowly at a temperature of 30° to 40° Centigrade. The mass is now of the consistence of honey. It is applied to the paper with a coarse brush, and afterward evenly divided and polished with a badger's-hair brush. The sheets are then dried on a table heated by steam. This is done in a few minutes, and the paper is then ready for shipment. The quantities mentioned will be sufficient for about 1,000 sheets of 50x90 centimetres, being a day's work for two girls. For black paper aniline black is used in the same proportion. The operation must be carried on in well-ventilated rooms protected from fire, on account of the combustibility of the material and the narcotic effects of the ligroine. The paper is used between two sheets of paper, the upper one receiving the original, the lower one the copy.

Supplies from **HYDRANT PRESSURE** the Cheapest power known. Invaluable for blowing **CHURCH ORGANS**, running **PRINTING PRESSES, SEWING MACHINES** in Households or Factories, **TURNING LATHES, COFFEE MILLS, SAUSAGE MACHINES, ELEVATORS, etc.** It is noiseless, neat, compact, steady; will work at any pressure of water above 15 lbs.; at 40 lbs. pressure has 4-horse power, and capacity up to 10-horse power. Prices from **$15** to **$300.** Send for Descriptive Circular to **BACKUS WATER MOTOR CO.**

I make heavy manilla envelopes of any size and shape: either flat or bellows pattern

No. 100. Mounted Enamel Pencil.

ANNOUNCEMENT TO THE TRADE.

The New A. T. Cross "Business" Pencil,

U. S. PATENT AUG. 29, 1882. PATENTED IN ENGLAND.

We take pleasure in presenting to the Trade our lately perfected, neat, substantial and convenient Pocket Pencil, made in various styles, and for which we claim superior excellence over any pencil ever placed on the market. Its most prominent feature is known as a **"Propel, Re-pel and Ex-pelling Lead,"** three features never hitherto brought into one combination. It is also made strong and durable in all its parts, the cases of every style (save one) being of Day's best quality hard rubber, and the mountings are of superior gold stock plate (not the ordinary electro plate or fire gilt, which soon wears off) and will keep bright and do service for years. Prices are nearly 50 per cent. less than any goods of the **same grade** that have ever been offered, and we recommend the early attention of the Trade to this pencil.

The accompanying are cuts of the four leading styles, retailing from 35 cents to 75 cents each.

Illustrated Circular and Price-List on application.

Power Embossing PRESS.

THIS is a powerful and simple machine, and is complete in every respect. The power can be thrown off and a break stops the bed instantly, thereby saving any covers or expensive plates from being damaged. The press is worked by a cam and toggle; the impression is regulated by bevel-cut gears on top, and the bed platen can be run up or down by hand-wheel on left side. Our new method of using steel rods makes the press much stronger than iron cast frames. It has a movable bed; can be used for steam or gas heat; is supplied with oil cups. This Embosser is strong and large enough for all regular work in a bindery.

Space between upright rods, 17 ins. Size of head, 9½ × 13½ ins.

PRICE, $375.00.

OVER 20,000 SOLD BEFORE OCT. 20th.

Mrs. DORR'S LAST PRODUCTION.

"Santa Claus Souvenir."

NOT A BOOK BUT A NOVELTY FOR THE HOLIDAYS.

Something New, Rich, Neat and Novel. Each one in White Envelope ; 25 in a Box.

THE reputation of the Author is sufficient to guarantee a very large sale, and Mrs. Dorr has received contributions for the Souvenir from well-known writers, among which are Paul H. Hayne, Constantine E. Brooks, E. C. Stedman, J. J. Piatt, R. H. Stoddard, Henry R. Dorr, Mrs. Mary E. Bradley and others. The above cut gives the shape (but not the size) of front cover. Size, 9¼ × 5¼ inches. Both front and back covers are Lithographed in **Nine Bright Colors and Embossed,** so that the cut gives but very faint ideas of the beauty of this salable novelty. The inside 12 pages, printed in two colors, on tinted paper are all cut out the shape of Santa Claus. Price of this Gem only 50 cents. White Looped Silk Fringed, with Protector, 90 cents. Sample copy mailed any DEALER on receipt of price. It is not a book, but a novelty that every Stationer, Bookseller, Fancy Goods and News Dealer can sell. We can deliver large quantities in New York City. It will sell in every State in the Union for the beauty of the work, reputation of author and popular price. Liberal Discount to Dealers. Address **TUTTLE & CO., Publishers, Rutland, Vt.** BAKER, PRATT & CO., New York Agents.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

THE GREAT ERIE RAILWAY,

LANDSCAPE ROUTE

OF AMERICA.

E. S. BOWEN, General Supt., New York.

JNO N. ABBOTT, Gen. Passenger Agt., New York.

Erie and Chicago Line

PASSENGER ROUTE.

THE SHORTEST, QUICKEST, AND SAFEST ROUTE to all points EAST. Fine tracks and lowest rates. The only route running **PULLMAN PALACE HOTEL COACHES** from

CHICAGO to NEW YORK,

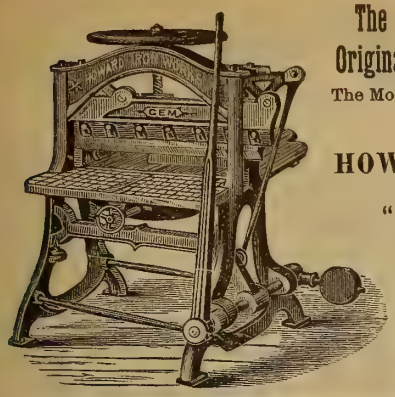
LEAVING AT 6.10 P. M.

and the only route by which passengers from the NORTH-WEST can connect at CHICAGO and secure locations in these Palace Hotels on Wheels.

You should travel by the **E. & C. LINE,**

BECAUSE its trains run **through** from Chicago to New York, avoiding the dangers of transfers, the risks attending the changing of cars, and the possibility of missing connections.

BECAUSE the PALACE HOTEL COACHES run in connection with its trains, furnish Meals as good as can be had at any first-class hotel, and allow passengers to eat with as much comfort as at their own homes.



BECAUSE not one passenger has been killed or even injured on its trains since the opening of the line five years ago. Nor has an accident of any kind occurred.

BECAUSE the great variety of scenery on this line renders the journey pleasant and profitable.

BECAUSE provision has been made for running the trains from Mansfield, "Special" to destination, whenever they arrive after departure of train forming regular connection. This insures a continuous passage between New York and Chicago.

W. B. SHATTUC, Gen'l Passenger Ag't, Cleveland, Ohio.

J. T. HOSFORD, Gen'l Western Ag't, Chicago, Ill.

BOOK ILLUSTRATION, OLD AND NEW.

BY J. COMYNS CARR.

(Continued.)

The Germans were the first to practise card-making as a trade, and they largely exported their wares, produced at Augsburg, into the cities of North Italy ; nor was it until the year 1441 that the card makers of Venice obtained an order from the magistrates, directing that no foreign manufacture of printed cards should be any longer imported. These printed cards were usually colored with a stencil placed over the block. It was only natural that this mode of reproducing impressions of a design should speedily be adopted by the church, for the purpose of circulating among the people figures of the saints. Possibly the card makers were themselves employed in the service of the church ; and it is at any rate certain that the earliest sacred subject engraved on wood, the celebrated block representing the St. Christopher, in the possession of Earl Spencer, and which bears date 1418, was found in a convent within 50 miles of the city of Augsburg. This print, like the early cards, is colored by means of a stencil plate; the design is of considerable size, measuring 11¼ inches in height, and 8 inches in breadth, and shows a quality of art superior to that which enters into the illustration of the earliest printed books.

There are several other early wood blocks which rank with the St. Christopher in point of time and style. One of these is the design of the Annunciation, preserved in the same volume which contains St. Christopher; another represents the Martyrdom of St. Sebastian, and a third, St. Bernardin, is preserved in the National Library at Paris. There is one characteristic which belongs to wood engravings of this period, and which is dependent upon the process by which they are afterward colored. In the original block, it is not uncommon to find that certain parts are left untouched, or partly indicated, with the view of being afterward filled up by means of the stencil plate.

It would not serve our purpose to enter into a detailed examination of these early woodcuts, although they possess the highest interest in connection with the development of an art which was destined to be permanently associated with the production of printed books. Our special concern just now is to follow the progress of pictorial illustration in its relation to literature, and here, as I have already stated, the next step in advance is marked by the production of what are known as block-books, which date from about the middle of the 15th century. The block-book forms an important connecting link between the illuminated manuscript and the later achievements of the printing press. It has this in common with the illuminated manuscript, that it is the harmonious and coherent result of a single artistic process, and the finest block-books possess for this reason a certain completeness of effect, which could never be secured even by the most elaborate and beautiful specimens of mechanical typography. The great charm of the illuminated manuscript consists in the fact, that the spirit of the artist seems to enter as much into the transcription of the text as into the invention of ornament or design which accompanies it. The whole bears the stamp of human handiwork and of human individuality ; a quality that, from this point of view of art, is of higher value than the utmost perfection of mechanical skill. Something of the same peculiar fascination belongs to the block-books ; although many of them are of comparatively little value, in point of artistic refinement and skill. The block-book, as its name implies, is a book, printed text and illustration together, from a carved block. Before the invention of movable type, the demand for the general circulation of popular religious works, doubtless, led to the employment of the wood engraver's art, which had already found exercise in multiplying the figures of the saints. The exact date and place to which the origin of these block-books is to be ascribed is somewhat uncertain, but it seems probable that the earliest specimens were produced in Holland, some years before the middle of the fifteenth century. I have said that these books have an intimate connection with the illuminated manuscripts which they superseded, and this is clearly shown by the fact that, in many instances, original manuscripts are still in existence, from which the engravers of the block-books obviously derived their inspiration. The works most freely circulated by this means are the "Apocalypse," the "Biblia Pauperum," and the "Ars Moriendi ;" and in several instances the manuscript prototype is still in existence. But although these early engravers were clearly dependent upon the illustrators of the illuminated manuscripts for the material of their work, it would be misleading to assume that the results they achieved are in any sense comparable to the models from which they are taken. Mr. Quaritch, to whom I am indebted for much valuable suggestion in connection with this subject, has pointed out that the labor of engraving these books must, in many instances, have been entrusted to workmen with little art or skill in the management of their material ; and certainly there are several considerations which go far to support this theory. In the first place, the engravings in the block-books are, in many instances, not up to the level of the art of the time. Mr. Chatto has pointed out that the block of the "St. Christopher," of which mention has already been made, and which is, undoubtedly, to be ascribed to an earlier date, is artistically of much finer quality than most of the illustrations to the works issued from the printing press ; and there are instances of blocks inserted in manuscripts produced before the year 1440 which prove that the cuts in the block-books do not, as a rule, afford a fair index of the resources of the art at the time. A superb manuscript of the "Apocalypse," secured by Mr. Quaritch at the Didot sale, containing designs of the highest artistic beauty and excellence, goes further to prove that the block-books, as a rule, were rough and rude imitations of the originals, executed by journeymen rather than by trained artists. But there are brilliant exceptions to this general rule, and the British Museum is fortunate in possessing one of the very finest of these block-books, which has recently been reproduced by the Holbein Society. This is the "Ars Moriendi," acquired in 1872, from the Weigel collection at Leipsic, for the sum of £1,072 10s., the highest price ever paid by the trustees for any printed book. But this precious possession, whatever it cost, must be reckoned of inestimable value, as an early and admirable specimen of book illustration. Unlike most of the other block-books of the period, it is a genuine and admirable work of art, and it is only necessary to compare the cuts with those contained in other versions of the work, in order to realize the superior claims possessed by the author of the original edition. Mr. Bullen, in a most interesting essay, prefixed to the Holbein Society publication, fixes a later date for the "Ars Moriendi," than for most of the other block-books with which we are familiar. "The manufacture of block-books," he writes, "commenced in Holland, and afterward practised in Belgium, appears to have traveled about in the middle of the fifteenth century into Germany, and fixed itself at Cologne, where this edition was in all probability executed;" and it is certainly true, as he proceeds to point out, that the illustrations betray the influence of the lower Rhenish school.

It may be taken as a capital illustration of the skill and resource possessed by the earliest wood engravers, and it seems to settle once for all the principles which determine all manner of decoration for printed books. Of course, the general qualities of art displayed in these designs are those which might only be expected in the period in which it was produced ; but what we have now to remark is the fine tact and taste with which the execution is adapted to the purposes of book illustration. The lines, though few, are admirably chosen to give effect to the artist's purpose, and throughout his work he would seem to have been constantly mindful of the relation which his picture should bear to the cut letters of the text. It may, of course, be said that the style which I am here holding up for admiration was imposed upon the artist by the imperfect resources at his command, and that he would have come nearer to the modern view of the wood engraver's craft had he possessed the necessary knowledge and experience of what can be accomplished. But this, even if true, cannot be held to affect the question we are discussing. The world of art is not an arena for the exercise of feats of manual dexterity, and the greatest artist is not he who encounters and conquers the greatest difficulties, but who most willingly submits himself to the obvious conditions which the particular style of design imposes. To my mind, the most elaborate and intricate specimen of wood-engraving which our modern times have produced, compare but poorly with the simple and abstract qualities displayed by the engraver of the "Ars Moriendi;" and I believe that many of the failures which have overtaken modern art, are due as much to the temptation which is afforded by increased facilities in technical practice, as to any other cause.

There are many other of the block-books which, if time allowed, would be worth description and study; but their use to us on this occasion lies in the fact that they mark a particular epoch in the development of book illustration. The last of them, which is also to be seen in the British Museum, was produced in Venice, in the year 1510, and is the work of Giovanni Andrea Vavassore. It is more elaborate in character than the "Ars Moriendi," and in the picture design there is a more ambitious attempt to secure fuller effects of light and shade. It anticipates, in a measure, the next revolution in the art of publication, consequent upon the invention of movable type. This invention, at first, seems to have exercised a depressing influence upon the practice of wood engraving.

The cutting from the letters for the text had, no doubt, formed an important part of his business, and the introduction of typography of necessity deprived him of a valuable means of subsistence, but the decline was but temporary. Under the protecting influence of the printing press, the wood-block rapidly acquired increased prominence, for it became the means of circulating engraved designs throughout every part of civilized Europe.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**
Each sheet is water-marked with name and date.

Correspondence.

DAYTON DASHES.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, Ohio, August 11, 1882.

Warm, wet weather does not have the effect of wreathing the faces of our merchants with smiles. This has been the experience of all throughout this section. The weather is more like spring than late autumn, and we are all looking for the advent of cold weather to give an impetus to trade. Never in my experience did I see Christmas goods displayed so early. For weeks past Christmas cards and other holiday specialties have graced the windows. The retail trade seems to follow in the manufacturers' and jobbers' custom of selling or displaying their wares in advance of the season. One enterprising salesman I know of, in order to be in advance of all competitors, is selling goods for the season of 1884.

C. E. Hopkins was here last week, and was in his usual enthusiastic mood. His line of albums for next year's importation orders is said, by those who saw it, to be simply immense. I suppose that his orders must be correspondingly so, or the bright smile would not sit so serenely on his face.

Travelers are getting to be very scarce, and with the exception of an occasional blank-book man, *non sunt*.

Among new enterprises in our city is the Miami art pottery, the outgrowth of the Ladies' Decorative Society. It is under the superintendence of Isaac Broome, formerly of Trenton, N. J., and is the only one in operation in the United States. Great things in the way of artistic ware are looked for, and Mr. Broome's peculiar ability in his line, it is thought, will justify the expectations of his friends.

I find all of our local jobbers of stationery very busy. The Holden Manufacturing Company is making a most attractive display. And when it opens out the Christmas rooms in addition to its present one, it will surpass all former efforts. It has leased for the manufactory—in advance of erection—a four-story building with all modern conveniences, and says that next year its customers will have no cause to complain of delays on its part.

R. A. Rogers & Co. have leased for their factory and printing office a five-story building on St. Clair street, which is supplied with power, steam-heater and elevator. The business in the line of oyster buckets, butter plates, printing, &c., has outgrown their present quarters.

Reynolds & Reynolds tell me that their trade is all that they can handle, and that they don't want any more until they get more facilities for handling it. All the same, I don't believe they would refuse a good order. Try them and see.

Our city has become the central point of a system of telephones, and all of the mills throughout the Valley are in connection with us; so that business is much more easily managed than formerly. Calling several of them up I find the same response from all—plenty of orders, but not very good prices. Why this should be so, is beyond the comprehension of

MIAMI VALLEY.

CINCINNATI TRADE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., November 13, 1882.

The question of absorbing interest among Cincinnati printers and stationers now is this one: "Are the Harpers going to start a publishing house in Cincinnati?" The New York *Sun* says: "John Harper says no." You know what "Harper says" used to be a settlement of the question, a final *ipse dixit*. But H. W. Derby is Harpers' agent, and he has been trying to negotiate, or he has negotiated, for the purchase of a beautiful property on the northeast corner of Plum and Fourth streets, this city, fronting 110 feet on Fourth street and 100 feet on Plum street. It was reported in the daily press that the negotiations and the purchase had been completed. The latest street report is that a hitch was caused by the holder of a lease, with three years to run, on one piece of property asking too much to let go. The whole affair now is beautifully shrouded in mystery, and therefore intensely interesting to guessers. In fact, it is a case of congestion of mysteries, serving to afford people gifted with curiosity a great deal of enjoyment. Some say that the Harpers are going to set up a regular Riverside Press concern here and supply a want that is now becoming clamorous. The report that the present beautiful dwelling structures on the ground are to be razed to make way for a monster seven-story concern makes a granite basis for the theory or hypothesis just stated. Others say Harpers mean to make this a sort of storage and distribution depot for their publications and books, chiefly school books, and that the present buildings will serve for that purpose. Others still say that they have negotiated for new presses and for the property, and that they will build on it and go into school book publishing in Cincinnati. H. W. Derby is here, and a gentleman, who says he conversed with him last Saturday, states that Derby represents himself as the agent of the Harpers, and that they are going into the publishing of school books. So you see there is no untying this knot in a hurry, and that it will be better to turn the whole matter over to old Father Time, who makes a business of untying many kinds of hard knots and stripping the gaberdine from all sorts of mysteries.

Speaking of printing presses brings up the fact that a new Democratic three-cent (single copy fifteen cents a week) paper is to be started here in Cincinnati. Its name is to be the *Daily News*. It will appear of mornings. The press is already in position at the southeast corner of Race and Longworth streets. It's a second-hand Bullock. The paper also has two presses under contract to cost $60,000. Carriers are busy making up routes. A full corps of editors has been engaged for the solid, serious work. Everything is ready for operation by not later than the last of this month or the first of next month. "The lacking ingredient"—if indeed in these modern times it can be called such—is an Associated Press franchise. It is not likely to get that. Everybody knows that it is quite impossible; but if some of the New York dailies are correctly informed and report their information correctly, the Associated Press is in a fair way to lose its grip on exclusiveness in low telegraph tolls. Jay Gould, you know, has been reported as expressing himself in opposition to monopolies in general, and particularly as opposed to a monopoly of the privilege of becoming exclusive customers of the Western Union Telegraph Company for a limited quantity of daily news at low rates. It is well to remember in this connection that Jay Gould is supposed to be largely interested in the Western Union Telegraph Company as an owner, and supposably would like to see the number of its customers greatly increased. Still, in that event, the Associated Press would be scarcely less a power than it is now, for its facilities and its organization for gathering and distributing news would remain intact—doubtless would be improved. But in the event of the telegraph company determining to treat all customers for news alike, the dawn of a new era for commercial journalism might be expected, and fresh enterprise would doubtless be swift to cultivate it.

While on the subject of great publishing enterprises, even though some of them be as yet in the air-castle state, it will be emphatically appropriate to mention the immense deep-rooted old Cincinnati establishment and great printing-house of adamantine foundations. It is almost superfluous to add "the house of Van Antwerp, Bragg & Co.," for to describe it is to name it. Its progressive spirit has been the glory of that house, and never in its shining history has that spirit

been so manifest in its products and in its management as on this very thirteenth day of November, eighteen eighty-two. Call its blank-book department a side-show if you please. That term is only applicable in one solitary situation, and that is when the great school-book publishing establishment is the main show. In any other comparison the blank-book branch will take rank nearly always as the main show, seldom as low as co-ordinate and never as subordinate. This, of course, is subject to limitation to the lines of work it turns off. Taking the public as the judge rendering judgment in orders for goods, a most emphatic verdict in favor of these products is already of record. Then the répertoire (speaking from the standpoint of "soprani" and "tenori" stars) of this department is formidable to competitors. The establishment as a whole, including all of the departments, has the advantage of knowing its territory and being known therein, and it has unlimited backing not only in capital but in power to increase that capital in case of an emergency.

The Peerless Paper File Company is enjoying an extraordinary demand for its products, which is a continuance of a popularity long since acquired and well sustained by proven merit.

In the way of sudden and immense success, the history of the Globe Files Company in this city has been phenomenal. It seems to be an exception to all rules in that its orders come pouring from all quarters in a continuously increasing ratio and keep everybody about the concern hustling to fill them.

The Charles Stewart Paper Company has its hands full, what with providing the daily press with news paper, the job press with every description of plain and fancy material and stationers' cases and show-windows with an indescribable variety of beauties in fancy goods, to say nothing of the no end of styles of stationery. It would take less space to tell what this house has not in the stationery line than it would to record what it has. At all events, that is the impression an inspection of the stock makes on the beholder. After all, blank-books and wedding and visiting cards have not been suggested, and the range of styles of this class of goods in the firm's stock is—is——well, it is bewildering.

John Holland's original designs for holiday goods in the way of charm pencils and other beauties are meeting the favor they deserve in copious orders from far and near and from all parts of the compass. His trade in gold pens is rapidly extending its field, especially in the East, where their swift growth in favor is almost astonishing. The West he holds, as he always has held it, with a steel grip. In the matter of business pencils and the Mackinnon stylographic pen, which he manufactures, they speak for themselves. They are going everywhere.

Fulton, with his gravity scales, is reaping a harvest. The Novelty Paper Company is receiving substantial reward for its enterprise in devising so widely useful a contrivance as its reversible wrapper.

Snider & Hoole, in bookbinders' supplies and machinery, are outdoing themselves—that is, by comparison of this year's business, month by month, with that of last year.

Samuel C. Tatum has a bonanza in his letter-presses, simply because every press he sells is a bonanza to the purchaser.

W. B. Carpenter & Co. find no lack of life in their general trade, and there never is a lack of liveliness in that house.

Wilstach & Baldwin are rushed to fill orders, and find their trade profitably extending everywhere, but most rapidly in the rapidly developing South.

C. T. Woodrow could tell, if he would, how to dress up a showcase and a window. He does it, and he has his hands full of job printing.

W. H. Pounsford & Co. are prepared for a fine run of Christmas trade, and they have their presses all humming on commercial work.

C. F. Bradley is always busy, and so are his presses.

Louis Snider's Sons have the appearance of doing a live and lively business in their long line of goods, and they are doing it.

The branch house of the Dennison Tag Company never had a richer or rarer assortment of holiday goods, and seldom, if ever, got rid of them more rapidly or to better advantage.

The Strobridge Lithographing Company, in its immense house, finds its work growing, and it looks longingly forward to the completion of the immense new house it has undertaken to build next season.

Russell, Mangam & Co. are in a similar boat, looking forward out of a great building to a vastly greater one, whose immense foundations are laid, and which is being rushed to completion, for an extension of their line of business next year.

All of the book stores are cheerfully busy, and are happy in anticipation of a large holiday retail and jobbing trade.

There are complaints of dullness, but no relaxation of activity. The dullness, everybody knows, is temporary. Briskness will come with the first winter storm. Now, as these lines are penned, the winds are rattling the window panes and howling without, as they career southward in serpentine flight with chilling wings, the harbingers of the swiftly approaching winter. To the man of business these notes, dismal enough in themselves, are musical by association with a certainty of a revival of briskness in trade. The crops have ripened and are garnered ready for the market. Winter will drive the farmer from the field and bring him and his products to the marts. The crops are abundant and the state of business almost universally is healthful. Only let the surplus products start to the tens of thousands of little markets and the channels of trade will have a freshet, if not a flood. PRINCE WILLIAM.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., November 14, 1882.

With the return of cool and seasonable, pleasant weather business has improved, and stationers report a very fair trade in all lines of goods. In fact, some dealers have about all they can jump to. 'Tis well; but this is only an indicator of what is coming a few weeks hence, when the holiday trade shall fairly set in. Indeed, the trade in holiday goods has already reached large proportions, dealers making the observation that trade has commenced a few weeks earlier than usual. This is accounted for in part for the reason that people hope to avoid the grand rush and crush that always prevails just before Christmas.

Importers report quite a demand for expensive goods of the bric-à-brac order. With some customers price is a secondary matter. This would seem to indicate that there is plenty of money somewhere.

Christmas cards are a special feature just now, and a great deal of room is given to this department in the shops that deal largely in this class of goods. In addition to the Prang and Lowell American cards, which, by the way, are equally as good as English and French in an artistic point of view, there are all kinds of foreign cards. A novelty for the season is a card of pressed natural flowers, so closely glued to the card that they will endure any amount of hard usage. Another novelty is a tiny round card, with a hand-painted figure. The snow and ice of winter are represented by ground glass strewn over the paint when it is wet, giving just the proper glistening effect.

Prang's Christmas designs are attracting a good deal of attention. Last year the prize series were pronounced beautiful, but an examination of those prepared for this year will convince all that they even excel those of last year.

Some of the nice nonsense in stationery suggests the use of polar-blue paper by the youthful damsel, with a lily thereon inscribed, for epistolary purposes. Engaged people, it is assured, adopt orange flowers as a fitting emblem for their writing paper from the moment of betrothal to that of marriage. Sporting characters are lavish of horse-shoes and jockey caps, even where billet-doux are concerned. A successful marriage proclaims its happiness to the world by showing two partridges contentedly sitting side by side on a tuft of greensward, as the description of the family note-paper.

The present styles of stationery for correspondence are neat, many of them artistic. The fashionable shades abound in terra-cotta, mazarine, marguerite, cadet-blue, café, drab, &c., with the prevailing ragged edge.

The advertising card mania still keeps up, and one concern in town now gives away 10,000 cards a week.

The "Old Farmer's Almanac" for 1883, the spirit of poor Richard surviving in it still, is out. It has safe advice as to thrift and economy if for nothing else, and it has been giving the usual advice, together with facts for farmers, and quaint facts and quotations, &c., since 1793.

Edward P. Call, who has been private secretary to Mr. Pulsifer, of the Boston *Herald*, has been appointed to fill the position of business manager of the *Daily Advertiser*, made vacant by the resignation of Edwin F. Waters.

General Butler, Governor elect, was the principal guest of the Boston Press Club, on Saturday evening last. He closed his speech (which was full of excellent advice to young newspaper reporters) with this sentiment: "The press, the watch-tower of liberty, the palladium of our principles, and the instructor of the people." General Butler once alluded to the press as a "forty-jackass power." But that was before he was elected Governor. "It all depends."

Speaking of dressing show-windows, I have traveled some and am bold to say that Boston stationers' shop-windows are about as artistic as they get them up, quality, not quantity, considered. A finely dressed show-window is almost equal to an advertisement in THE STATIONER.

L.

TO MAKE A GOOD SAND PAPER.—As in cleaning woodwork, particularly pine and other soft woods, one process is found to answer better than another, we may describe the manner of manufacturing a stone-paper, which, in some cases, will be preferred to sand-paper, as it produces a good face and is less liable to stratch the work. Smooth on both sides with pumice-stone, any good tough paper, and tack it on a board, giving the paper a coating of strong glue, size and then sift a quantity of finely powdered pumice-stone through a sieve of moderate fineness. When the surface has hardened, repeat the process till a tolerably thick coat has been formed upon the paper, which, when dry, will be fit for use.—*Ex.*

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President. **DALTON, MASS., U. S. A.** JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show.

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS **LINEN LEDGER PAPER** Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

Being **Triple Sized** (a process entirely our own) and **Loft Dried,** can be erased and written upon the fifth time distinctly. None genuine without the water-mark, thus—**Old Berkshire Mills Linen Ledger,** and date.

CARSON & BROWN CO., Manufacturers.

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

THE previous success of our Cards, it is confidently expected, will be fully sustained, if not increased this season, an expectation which is already verified by the large advance orders received, justifying our increased efforts to bring out a line superior to all our previous productions. Our line will again comprise Double and Fringed Cards as well as Heavy Mounts. All the Fringed Cards will be provided with protectors, and envelopes will be furnished for all cards costing $1.80 and upward. The names of the artists who have contributed designs are a guarantee of the excellence of our Cards. We will name only the following:

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,
MISS F. BRIDGES,
MISS ROSINA EMMET,
THOMAS MORAN,
ALEXANDER SANDIER,
R. G. BIRCH,
GEO. J. BARNES,
MISS DORA WHEELER,
MISS FLORENCE TABER,
FREDERICK DIELMAN,
HARRY BEARD,
F. SCHUYLER MATHEWS,
H. P. KENDALL.

The literary matter in connection with our designs has been carefully attended to, among others, by MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

MAHON'S PAPER SIZING.

Mahon's paper sizing is a wax preparation which comes in the form of small sticks, and is an article for saving labor to the accountant, the clerk and the draughtsman. When the sizing is properly applied, after using the steel or ink eraser, most kinds of writing or drawing paper will, it is said, receive any of the inks in use as clearly as if the surface had not been disturbed, It will also improve the surface of any paper liable to blot, rendering it equal to bristol board. With care one stick will last an indefinite period. After erasing carefully with a sharp knife, smooth off with the ink eraser or rubber; the paper is burnished with ivory or the finger nail; the sizing is then passed quickly over the surface of the paper with light pressure, so as not to smear, and the burnishing is then repeated. During the operation the paper should lie on a solid and smooth surface. This sizing will, it is thought, recommend itself to the attention of every house wherein any writing or drawing is done. From the experience so far had, it is believed that no one can use the sizing without acknowledging its usefulness. Eberhard Faber, 718 and 720 Broadway, New York, is the sole agent.

THE LIVERMORE STYLOGRAPHIC PEN.

(Full Size.)
Patented January 4, 1881.

Endorsed unanimously by the Trade as giving perfect satisfaction to their customers. Many say "It is the only Stylographic Pen worth having at any price." More of these goods are sold and used than of all others combined. They always command a ready sale; try them.

(Closed.)

(Open.)

Our New Pen, "THE MONARCH," has the reverse case—closing up short for the vest pocket—holds a large quantity of ink and is made very strong and substantial.

LIVERMORE'S STYLOGRAPHIC LEAD PENCIL.

(Full Size.)
U. S. Patent, September 13, 1881, also patented in foreign countries.

This Pencil is the greatest novelty of the season; contains valuable features never before combined in any lead pencil. It sets the lead automatically, ready for use, and by a single motion the lead is retired within the case after using. It is the most substantial Pencil ever produced, is handsomely made with Hard Rubber Case, Nickel or Gold-Plated Trimmings, as desired. It sells at sight.

The demand for the above goods is constantly increasing, due entirely to their superiority over all others. They are made by the Stylographic Pen Co., of Providence, R. I., who own and run the Largest Factory in the World devoted entirely to this class of goods.

STYLOGRAPHIC INKS,

Especially adapted for Stylographic Pens,

IN COLORS, BLACK AND COPYING.

Now in use in over Half a Million Stylographic Pens, and unexcelled for general use.

J. A. Pool

TRADE MARK

John Wilson's Sons,

Importers.

No. 31 Maiden Lane,

New York, 1882

To the Booksellers and Stationers

Gentlemen;

We have prepared a catalogue of specialties for the Holiday trade. It is finely illustrated, showing over one hundred choice designs, and will be forwarded to dealers, free of charge, upon receipt of their applications.

Very truly,

John Wilson's Sons

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Charles Bruckman, printer, Leadville, Col., has moved to Denver.

John O. Rice, bookseller and stationer, Portland, Me., is insolvent.

W. E. Horton, bookbinder, Providence, R. I., has gone out of business.

F. McCrellish, of F. McCrellish & Co., publishers, San Francisco, Cal., is dead.

E. W. Addis, publisher of the *Standard*, Brewster's Station, N. Y., has been burnt out.

Cummings & Harrington, bookbinders, San Francisco, Cal., have dissolved partnership.

J. A. Osborn & Sons, paper manufacturers, Pepperell, Mass., are reported to be insolvent.

Hinman, Moody & Co., dealers in wall-paper, Kansas City, Mo., have sold out to S. C. Moody & Co.

Lewis & Hodgson, publisher of the *Herald*, Mariposa, Cal., have dissolved partnership, S. J. Lewis retiring.

D. W. Baird, Lowden, Iowa, books, stationery and notions, has admitted William Richman to partnership, under the style of Richman & Baird.

The Newsdealers and Stationers' Union of New England has established a monthly journal as an official bulletin of the organization. It is known as the *Retail Newsdealer and Stationer*.

Owing to the steady advance in the price of crude rubber, manufacturers of rubber bands have advauced the prices of these articles 25 per cent. for less than a package, and 33⅓ per cent. for full packages.

E. & H. T. Anthony & Co. show pictures of Mrs. Langtry in cabinets, promenades and panels, for which there is said to be a great demand. Similar pictures of Adelina Patti are also shown. Sarony is the photographer.

John C. Koch, the senior member of the firm of Koch, Sons & Co., who has been in New York for a few months, left here on Thursday of last week by the steamer Frisia, to return to his home in Berlin. During his visit here he has enjoyed excellent health, and derived much pleasure from seeing numerous friends, from whom he was loth to part.

William C. Horn, of Koch, Sons & Co., is now on a visit of about two weeks, at Baltimore. Mr. Horn has not been enjoying very good health lately, and this little trip is taken with the view to recuperate. Fred. W. Horn is in Boston on business for his firm, and finds trade surprisingly good. He has just been raking in orders in large numbers. He too has been in poor health lately, and is very little improved.

M. F. Tobin has just introduced two new designs of flower palettes, representing asters and balsams. The firm has in course of preparation six more designs in this line, which, it is said, will surpass in design and finish any similar goods yet introduced. The house shows a line of imported palettes artistically painted and richly varnished, embracing eight designs, six of which represent couples in love-making and the other two Alpine scenery. It will soon issue a new series of "Owl" plaques in six designs, which are neatly gotten up and will make a hit.

Four of the novelties which Obpacher Brothers have this year placed on the market are meeting with a demand beyond anticipation. These goods are highly prized by all who see them for their beauty of design and elaboration of finish. They are among the specialties of this house, and they were designed by it. The fringe calendar is an artistic piece of work, the designs surrounding the dates being of a high order of merit. Besides the fringe the embellishments consist of silk cord, running around inside of the fringe and having a loop for the purpose of suspension, and four satin balls, one at each corner. Each comes in an elegant box, which is in keeping with the character of the article. The "Gem Palette," which has been previously referred to in these columns, is perhaps the most attractive novelty offered in the card line this season, as the demand for it shows. Nearly all orders were duplicated and many triplicated for this beautiful article. The other special novelties consist of two sizes of satin bannerets, which are among the most exquisite goods in this line ever produced. One size contains ten designs and the other thirty-six. All of them are of a rare degree of artistic workmanship, and are embellished with rich and novel trimmings.

The Fountain Falcon Pen, advertised in another column, is the latest improvement in fountain pens, the patent being issued on October 10, 1882, to the inventor and patentee, J. Fred. Franklin, New York. The Esterbrook "Falcon" pen, to which the attachment is made, will write, it is said, from four to six times as much as the same pen without the attachment. Although the pen has only recently been placed before the public, the demand is said to exceed the supply, and it is thought that it is destined to become a necessity to business men. The fountain attachment consists of a non-corrosive metal cup fitted under the pen. There is said to be no danger of its blotting, as the ink only flows down when the points of the pen are pressed apart. Henry Bainbridge & Co., 99 and 101 William street, New York, are the agents for this pen.

Russell, Morgan & Co., Cincinnati, have got out some handsome show-cards for their playing cards. These are done in good style, with richness of color and ornamentation that will help to attract attention and lend a brightness to any stationer's store. The playing cards made by Russell, Morgan & Co. are well made, handsomely designed, and every pack, even to the cheapest, is put up in a separate box.

The New York *Observer* has issued an illuminated calendar for 1883. It is a small quarto, the two exterior and two of the interior pages being chromo-lithographed in a style which suggests that the work was done by Marcus Ward & Co. It is a pretty little thing.

If any man wants to know how to do business he will find a very full line of information in the book, "How to Keep a Store," published by Fowler & Wells. This work is not only interesting but is full of useful suggestions.

The attractive lines which McCarty & Hasberg have offered this season have been the means of bringing a great many new customers to this house.

Henry Levy & Son are still offering bargains in novel and elegant articles. The trade should avail themselves of this opportunity.

Lancefield Brothers, books and stationery, Hamilton, Ohio, have advertised their stock to be sold by auction.

George A. Mosher, publisher of the *Record*, Petoskey, Mich., has sold out to J. S. Freeman.

F. D. Mead, publisher of the *Chronicle*, Vallejo, Cal., is dead.

C. E. Vreeland, wholesale stationer, Dallas, Texas, is closing out.

J. S. Wilkins, books and stationery, Marysville, Ohio, has sold out.

The business of N. Ure & Co., books and stationery, Toronto, Ont., is offered for sale.

Middlemist & Taylor, dealers in wall-paper, Minneapolis, Minn., have been burned out.

John. A. Johnson, publisher *Chronicle*, Durham, Ont., has sold out to A. H. N. Jenkins.

F. Wempe, of Wempe Brothers, paper-box manufacturers, San Francisco, Cal., is dead.

J. Rockwell & Co., printers, Columbus, O., have dissolved partnership. Mr. Congdon retires.

C. Brile, fancy-goods dealer, Louisville, Ky., has been burned out. Loss, $15,000; insured, $7,500.

The estate of John Palmer, bookbinder, Philadelphia, Pa., has been injured by fire. Loss, $1,000; fully insured.

Griffing & Co, publishers of the *Lancaster Republican*, Lancaster, N. H., have dissolved partnership. C. L. Griffing continues.

Luke Brophy, paper-stock dealer, Gloucester, Mass., has admitted T. W. Brophy to partnership, under the style of Luke Brophy & Son.

Joseph Eichbaum & Co., printers, Pittsburg, have forwarded a copy of a two-month calendar for November and December, 1882. It is clearly printed in distinct type.

Travelers who have just returned from extended trips throughout the country report that the demand for stationery and fancy goods runs only in sections. In the States of New York, Ohio, Michigan and Indiana trade is reported to be exceptionally good.

The Marseilles Paper Company, Marseilles, Ill., is reported to have become financially embarrassed, and endeavoring to compromise at fifty cents on the dollar. The liabilities are placed at $91,500; the assets are nominally much larger, consisting of the mill property, valued at $75,000, stock and accounts.

Charles J. Cohen, Philadelphia, has opened this week a shipment from Dresden, consisting of elegant silk plush brackets in cardinal or peacock-blue shade; each bracket is fitted with an exquisits cup and saucer of real Dresden porcelain in a variety of choice decorations; the whole is a beautiful article and sells at a moderate price.

Myers Brothers report that the sale of ivory Christmas cards is far beyond their expectations. The firm's cork and metal goods are also meeting with a large sale, and are said to be among the greatest novelties offered this year in the card line. The late introductions in the line of satin manufactured goods are far handsomer than any previously shown.

Mermod, Jaccard & Co., Fourth and Locust streets, St. Louis, have added to their jewelry, silverware and fancy goods business a department for art stationery, and have engaged as manager of this department Charles H. Longstreth, late of New York, and E. J. Elkington, late of London, England, as coat-of-arms and monogram engraver. The firm has forwarded a sample of its work in the shape of a collection of designs of monograms, coats-of-arms, visiting cards, &c., all of which are in good style and well executed. The whole are fastened together with a bow of cardinal and old gold colored satin ribbon, and the title page exhibits exceedingly

good and unique taste in design, execution and blending of colors.

A. J. Donly, books and stationery, Simcoe, Ont., has sold out.

Eugene Promis, novelties, New York city, has made an assignment.

Colonel Woodburn, publisher, Springer, N. M., has sold out to Clark & Sturges.

Willy Wallach is now offering a rare line of Easter cards to the jobbing trade.

The limited partnership of Montague Marks, publisher, New York city, was dissolved on November 4.

Runyon & Milice, books and stationery, Warsaw, Ind., have dissolved partnership. Peter L. Runyon succeeds.

J. N. Heureux & Co., books, pictures, &c., Lewiston, Me., are reported failed and offering 25 cents on the dollar.

A fire broke out yesterday evening on the second floor of the building No. 40 Fulton street, occupied by J. M. Davis, a job printer. The first floor is tenanted by Wilbur & Hastings, stationers. The total damage to the stock was $1,000 and to the building $500.

C. M. Ward, well known as lately connected with the Springfield Printing Company, is now the resident New York agent of "The Globe Files Company," of Cincinnati, having his office at 28 Bond street. Mr. Ward will be glad to have the visiting members of the trade call and examine his samples.

William A. Pike, of Godfrey & Pike, Bridgeport, Conn., was united in marriage last week to J. Adelaide Bennett, at the First Baptist Church, Bridgeport. The happy pair received the congratulations and best wishes of a large circle of friends and acquaintances. The bride is the daughter of C. H. Bennett, a well-known resident of Bridgeport.

J. H. Bufford's Sons have this week introduced a novelty in the shape of an advertising card. It is a representation in cut glass of Santa Claus traveling with his reindeer. It is richly colored and is very pleasing. This firm is adding several designs to its line of satin novelties in the shape of banjos, drums, lawn tennis, &c., which come both plain and colored.

C. J. Moffat, New Haven, Conn., displays a very handsome stock of fine stationery, including pocket cutlery, writing-desks, pocket-books, albums, holiday goods, &c. He also carries a full line of blank books of the best manufacture. His new building, 60x80 feet, and four stories high, built in an elegant and substantial manner, is one of the finest in New Haven.

A. Carlisle & Co., commercial stationers, 226 California street, San Francisco, have issued a "Travelers' Daily Report Book," which is intended to facilitate accounts and correspondence between travelers and the firms they represent. The book, which is suitably bound for the pocket, contains a list of expense items to be filled up by the traveler, as well as spaces for entering collections and remittances, with a stub duplicate to be retained. It is systematically arranged, and if invariably used would be exceedingly useful, both as an immediate check and for future reference.

C. M. Cott & Co., manufacturers of stationers' goods, 27 North High street, Columbus, Ohio, have been badly victimized by an unprincipled knave who managed to obtain employment with them as a traveling salesman. His plan of operations was two-fold; he either obtained genuine orders and secured payment for the goods, or else he sent in fictitious orders and got possession of the goods, which he peddled around to whoever would buy them. In this way he managed to swindle his principals out of $250. Subsequently Cott & Co. ascertained that the man, who was known by the name of Lewis to them, but had several aliases, was an old practitioner. He is being looked for.

Among many other articles in the staple line of stationery carefully attended to during the recent visit of Charles J. Cohen, of Philadelphia, to Europe, are porcelain water wells. These Mr. Cohen has obtained direct from the Staffordshire potteries, after special designs, each piece bearing the well-known guarantee trade-mark of the house. The variety covers all required for the counting-room or office, and it is stated that prices are below the figures which have usually been current. Samples will be furnished to the trade on application.

Carlton McCarthy & Co., Richmond, has published a work called "Detailed Minutiæ of Soldier Life in the Army of Northern Virginia," a reminiscence of the civil war, written by Carlton McCarthy, who served as a private in the Confederate army. Passing by the partisan sentiments which crop out rather unduly in some parts of this volume, the book is entertaining and descriptive, with features of great interest to those who fought on either side.

E. G. Hart, publisher of the *Advocate*, Mount Forest, Ont., is closing out.

The James & Webb Printing and Stationery Company, Wilmington, Del., has secured by purchase from the Mechanics' Loan Association the property at No. 224 Market street, which it now occupies, for the sum of $16,000.

Among the visiting members of the trade to the city during the week were H. B. Jadwin, Carbondale, Pa.; P. P. Braley, Glen's Falls, N. Y.; Mr. Allen, of Allan, Wilson & Co., Iowa City, Iowa; I. M. Loughead, Philadelphia.

The Stationers Board of Trade this week acting in behalf of the executors of the late Willy Wallach, succeeded in arriving at an amicable plan for the settlement with the Underwriters, of the losses incurred by the burning out of Mr. Wallach's stock in the Park Row fire on January 31 last. The full amount of the loss claimed has been allowed, and will be paid in the course of a few days.

The firm of Clague & Wegman, printers and stationers, of Rochester, N. Y., has taken into partnership Paul J. Schlicht and Lovasso Field, and proposes to publish Schlicht's indexes for public offices, banks, &c., as well as manufacture several other specialties, among them the Shannon perfection files and transfer cases and Shannon music binder.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, NOVEMBER 16, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

AN international exhibition is to be held at Amsterdam, Holland, in 1883, from May to November. We have heretofore expressed our opinion of the value of such exhibitions. Americans ought not to neglect them.

OUR Minneapolis correspondent presents some practical thoughts concerning the display of stock. But he has also something to say about the attention which a merchant ought to give to purchasers, however inconsiderable they may seem. We hope that the trade do not need to take lessons in courtesy. True manliness begets politeness, and this is from the heart—spontaneous and not artificial. The man who has to put on a veneer of courtesy is a hog underneath, and people will find it out. Cultivate the heart in business relations as in every experience in life. Be just and true.

CAPE COAST FRAUDS.

We referred last week to the fact that an English contemporary had been exposing the operations of a swindler or set of swindlers who had tried to induce English manufacturing stationers to send sample lots of goods to Cape Coast, with the offer of establishing profitable commercial interchanges. We then asked if any of our own trade had been thus tempted, and in reply we have received two communications. R. G. Hutchinson, of this city, sends one, of which the following is a transcript:

CAPE COAST May 28th 1882

R. G. Hutchinson, Esqr,
44, Maiden Lane New York

SIR, No doubt you will find this letter very long, as I neglect to answer you in haste, I am searching my last year's letters then I find your's that I never give you answer, and in reply I beg to say that, all the Lamps are suitable to my market, therefore I shall be most happy of you to send me Some of your Stationery together with the Lamps, as, to your manner of doing business, of doing so I shall not fail to send my remitance as quick as possible. We hope the revival of trade will enable you to favor me with your orders, that may from time to time by making you consignments such as, IVORY, PALM KERNELS, PALM OIL, GUMS, INDIA RUBBER, INDIA RUBBER MIXED, MONKEY SKINS, GUINEA GRAINS, BENISEED, or cash, I therefore request your attention of an order which I have received from Winnebah a port at here, for a cargo of OSTRICH FEATHERS, to be shipped to your place of course I don't know whether they will be suits to your firm that I may send them in cases by this mail steamer, therefore by the coming of the Stationery and the Lamps try and let me know and send them to you, awaiting your commands and in the hope that this may lead to a permanent correspondence to our mutual satisfaction

I remain Sir Yours Ever truly
P. S. DYSON

Full address P. S. Dyson Merchant & Trader Manor House Hospital Street Cape Coast W. C. Africa

In answer to this, Mr. Hutchinson told P. S. Dyson to send exchange on New York, and he would fill his orders. This reply was not prepaid, and was subsequently returned to its writer.

The other instance is that of Theo. Leonhardt & Son, Philadelphia, who send us the original of the following letter:

CAPE COAST, September 21 1882

Theo Leonhardt & Son 324 Chestnut st Philadelphia,

GENTLEMEN, Having seen your names im the New Remedies that you are manufactures of French Chromo Cards, we take this time of showing ourselves to you & offering our services for the purchase of all kinds of English goods, upon hearing from we shall be pleased to send our orders to you, at foot we request to forward us a sample packet of your cards, &c, by showing us all the articles you got there, as to your way of dealing, & shall therefore be enabled to make you some handsome & profitable remittances Shortly hoping our correspondence with you may result in the establishment between us Business relations that will long continue to our mutual satisfaction & advantage We Remain Sirs Yours Ever truly

LOVE BROTHERS Merchants

This is the same crowd whose doings have been shown up by our English friend. Although purporting to emanate from two different firms these swindling letters are plainly the conception of one mind, and the handwriting in each is that of the same individual. We doubt if any members of the American trade have been deluded by this fraud. If there are any further communications of this kind we shall be glad to know of them, and invite all who have had a like experience to furnish us with the evidence.

ANSWERS TO CORRESPONDENTS.

The correspondent who some time ago made inquiry about cigarette papers, is informed that his inquiry having attracted the attention of Robert Fletcher & Son, of Kersley Paper Mills, England, that firm has forwarded to THE STATIONER samples of specially prepared cigarette papers of excellent quality. Among these is a fine sample of so-called rice paper and another which is impregnated with tobacco and made specially for the American trade.

Subscriber asks: Who makes good carbon paper for the type-writer?

Ans.—Stephen T. Smith, 14 Park place, New York; L. H. Bogers, 75 Maiden lane, New York; Cook & Cobb, New York.

S. C. W. says that he wants to buy a bill of window shades and goods that go with them, and wants addresses of manufacturers and dealers.

Ans.—J. C. Wemple & Co., 444 Pearl street, New York, make shades and sell fixtures. Stewart Hartshorn, 486 Broadway, N. Y., manufactures fixtures.

Pruriens wants to know who makes "Lyons parchment linen folio, silk-finish" paper and where to get it.

Ans.—Massasoit Paper Company, Holyoke, makes it, and Alexander Agar, corner William and John street, keeps it in stock.

OBITUARY.

THOMAS MCCORMACK.

The death is announced of Thomas McCormack, late with the firm of T. H. Payne & Co., wholesale stationers, Chattanooga, Tenn. Deceased was popular and efficient, and a genial gentleman. He was forty-three years of age, having been born in New York city in 1839; he was formerly with E. & H. T. Anthony & Co., but entered the service of T. H. Payne & Co. in 1877, and remained with that firm until his death, which took place at the Stanton House, Chattanooga, on the 12th inst. Mr. McCormack contracted pneumonia about eighteen months ago, and, although having had a severe attack, had apparently recovered, but was again taken ill several weeks ago, and gradually declined and died. A funeral service was conducted at the Stanton House, and the body was forwarded to New York, where it arrived and was interred

yesterday in Greenwood Cemetery. Mr. McCormack was at one time a member of the Twenty-second Regiment, N. G. S N. Y.

ST. PAUL NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

ST. PAUL, Minn., November 13, 1882.

Some of the readers of THE STATIONER have evidently come to the conclusion that St. Paul had gone out of existence, or that your correspondent had gone out in the woods to die. Let me assure them that such is not the case. I have not been hunting or fishing, neither have I been off on a vacation to see my girl, but, like everybody else here, I have been busy, and though a little disfigured, St. Paul is still in the ring, where she intends to stay for all time to come.

Since my last letter business has at times boomed, so that everybody has had all they could do to keep up with their orders.

Trade at present, though a little light in some lines, has every indication of a big improvement as soon as cold weather sets in. The winter being rather backward, farmers are spending as much time as possible in the fields preparing for spring crops.

The St. Paul Book and Stationery Company reports trade first-rate. This house now has one of the largest and most complete stocks ever shown in the Northwest, and Mr. Brooks, the manager of the wholesale department, says that he is selling at a fair living profit to the house, and at the same time at prices that will enable his customers to realize a good margin on what he sells them. He shows some really fine goods in Russia, morocco and alligator, such as photograph and autograph albums, desks, nail and toilet sets. The house is now meeting with well-merited success, its motto being quick and large sales, moderate profits, and good-will to all.

Averill, Russell & Carpenter are doing all the business that they can handle, and report orders as coming in about as fast as they can fill them, and that is saying considerable.

The T. S. White Stationery Company is doing a splendid business in holiday goods of all kinds, of which its stock is full and complete.

H. M. Bristol & Co., of Utica, N. Y., have recently opened a retail store here, which promises to be not only a credit to the firm but an ornament to our fast-growing city. Ed. Butte, who formerly managed the Minneapolis Book and Stationery House, is in charge, and promises to make the store one of the leading attractions of St. Paul. Of his ability to do this there is no doubt, for he is a man peculiarly adapted to the retail business, and has the wonderful faculty of keeping his store always as neat and bright as a new silver dollar. He reports business as having far exceeded his most sanguine expectations, and prospects for future trade better than he had dared to hope.

It certainly is pleasing and gratifying to see that some members of the trade are taking up the question of window-dressing with such earnestness. There is nothing in the world that will attract and hold trade as a neat and tasty window, and it is really painful to see how some old, experienced business men neglect this important part of their business.

Let the goods in the window be arranged with the view of attracting attention, and not as though you were trying to display all of your stock at one time. Some goods look a great deal better when they have the appearance of having been "fired out of a gun," but at the same time do not let one article completely hide any other. Packages should be broken, so as to display the goods, and not the wrappers. If a person sees in a window a large, neat box, labeled "1 Photograph Album, No. —," or "1 copy Burns, 8vo, tree calf," how is he to know whether the box contains what is represented by the label, or sawdust?

Again, take an elegant looking package labeled "Marcus Ward's Pure Irish Linen Note;" how is a person to know whether it is note paper or a gross of accommodation penholders?

Full packages with outside wrappers should never be put in a window. Let the goods be displayed so that passers-by can see what the merchant has for sale, and not be left to draw conclusions from labels.

Stock on shelves and in show-cases cannot be kept too neat and attractive, but should be changed often, so as to have the store always looking new and fresh. Sample books should never contain a thing that is not in stock. As soon as an envelope or sheet of paper becomes soiled or torn, it should at once give place to a new one, so that a salesman will not be compelled to say, "This is an old sample; but I assure you the stock is in good order."

Customers cannot receive too much attention. A lady who comes into a store for the first time and calls for a lead-pencil or five cents' worth of pins, should receive the same attention that is paid to one who is a daily visitor, and who spends hundreds of dollars a year.

I do not believe there can ever be any rule for either window-dressing or waiting on customers. In the former case, the man who does the work must use some judgment as to the size of the window and the character of the goods to be shown, and in waiting on customers he must know how to "size them up." It is the man who keeps his store always neat and clean, and employs polite and obliging salesmen, who is the successful merchant.

Hoping that others may give their views on this important subject, which should be uppermost in the mind of every business man, I am

MINNEHAHA.

On July 13 the AMERICAN STATIONER issued a double number of nearly 80 pages, in a granite-tinted wrapper. Two-thirds of its bulk consists of well displayed advertisements, and the notes on trade and novelties and new goods are valuble, instructive, and entertaining. Like everything that comes from the Lockwood Press its mechanical appearance is admirable.—*Paper and Printing Trades Journal, London.*

The first newspaper published in Europe is said to have been sold in the streets of Paris in 1494, during the Italian war of that year. It expired in 1495, and can now only be found in the public library of Nantes.

A NEW PROCESS OF TINPLATE DECORATION.

Chromo lithographers must look to their laurels, if all be true that is said of a new process now used for the decoration of tinplate. A well-known London firm is applying the process to tin in a way that renders wholly unnecessary the addition of labels or chromo-lithographic wrappers on cans, plates, &c. When the tin has once been treated, its decoration will stand any test. The metal may be destroyed by acids, but the design will still cohere and retain its colors. Soap and soda may be employed for scouring, but the pattern endures triumphantly. If the decorated tin covers preserved meat, fish, &c., it may be safely dipped into boiling water, whereas at present the tin cans receive their wrappers after boiling with their contents.

The uses to which tin prepared under the new process can be put are, of course, very numerous. Already thousands of the decorated tins have been made for an American fruit-preserving company; large numbers of boxes for wax-lights have been supplied to a London match factory, and a new show-card for Liebig's extract of meat has been warranted to last for seven years. The process has also been utilized in making tea-trays, window-box tiles, show-boards, advertising plates and similar articles in which a showy, durable design is required. It appears that not only are colors used freely, but that by the aid of electricity the effect of gold, silver, cloisonné and mother-of-pearl are perfectly produced. It is also affirmed that the tin plate worked upon can be so thin that when sent through the post it will roll up in a periodical and hardly add to the weight. The pattern to be conveyed to the tin is taken on a chemically prepared matrix of paper.—*Exchange.*

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, November 15, 1882.

THE MONEY MARKET.—The local money market is easier, call loans ranging from 4 to 7 per cent., the inside rate on governments. The discount rates for prime mercantile paper are 6@8 per cent. The stock market shows a slight improvement in tone this week under an easier money market, but there is still an absence of outside buying, which is necessary to force prices up to a higher level. Government and railroad bonds have shown an improving tendency. Foreign exchange is quiet and steady.

THE PAPER MARKET.—The business reported by dealers shows no improvement in the demand as a general thing, but in instances some houses have experienced a little better trade since the excitement attended by the election has passed off. Print papers, more particularly news, are held very firmly, and we hear of several large manufacturers who have advanced their former prices ¼c. While this advance is not general, it is an evidence of the position of business in the manufacturing branch of the industry. With this month ends the fall trade in straw boards, after which for sixty days the demand, it is expected, will be limited, and between December and January not more than one-third of the product will probably be marketed.

THE STATIONERY MARKET.—As the holiday season draws near business improves, and a very active trade has been developed. Orders by mail communication continue large, and the nearby jobbing trade assist to make up a very fair aggregate for the week. A large share of the business now doing is with the nearby and city trade, who have laid in a large portion of their stocks of goods for the holidays, and in about another fortnight those who have any goods left over will close them out at retail. The fancy-goods men have had a somewhat lighter week, and the toy trade is very active. There is a steady though not brisk business in staple goods, and prices are firm.

By way of Customary Annual to the Trade, we beg to submit that the Samples now in our Agents' hands for Fall and Spring have been selected with most scrupulous care, and after an exhaustive examination of **All New Designs** cut by Standard Factories for the season's distribution.

We claim for the product a far **Higher Degree of Excellence** than heretofore compassed by any individual House, approximating, as closely as possible, a **Perfect Assortment.** Prices being equal, the comparative merit of those lines submitted to your notice will doubtless, to a great extent, control selection.

We challenge and respectfully solicit direct comparison of our collection with those of any other Houses representing that branch of artistic industry which is our **Exclusive Specialty.**

The untiring effort of over thirty years, which has resulted in our sales being the largest recorded for the past two seasons, has also given us an intimate knowledge of the wants of that widely extended trade to which we cater. This fact, coupled with unvarying promptness and watchful care of our customers' interests, will, we feel assured, secure for us a continuance of your esteemed patronage.

Our Agent will indicate, by direct correspondence, the date of his visit. Failing receipt of such advice, Samples shall be forwarded, free of expense, upon receipt of request.

Very truly yours,

JOHN J. McGRATH,

FORMATION OF COLORING MATTERS BY ELECTROLYSIS.

BY M. FR. GOPPELSROEDER.

To produce aniline black upon tissues or paper moisten them with the solution in water of a salt of aniline, giving the preference to the muriate. Place the goods upon a plate of metal not attackable by the solution, and in connection with one of the poles of a galvanic battery or of a small dynamo-electric machine. Place upon the cloth or the paper a second metallic plate, which carries in relief the design or writing to be produced, and which is in connection with the other pole. On applying the necessary pressure and allowing the current to pass, a copy of the design is obtained in aniline black. I have in the same manner produced impressions of medals and coins. It is also possible to write with a pencil of an unattackable metal or of a carbon conductor, forming one of the poles, upon the tissue or the paper moistened with the solution of the salt of aniline and placed upon a metal plate which forms the other pole. Wherever the pencil, under a light pressure, touches the tissue or the paper the current passes, and there is a development of aniline black, which is fixed upon the tissue with the same solidity as the black developed by ordinary methods.

This method may be employed in factories for marking pieces with a fast color, black or some other, capable of resisting all the operations of bleaching, dyeing or printing. The same method may be used on other occasions when indelible stamps are required.

I have confined myself to mention the simultaneous formation and fixation of aniline black. I might in like manner speak of any other coloring matter capable of being formed as easily as aniline black by dehydrogenation or oxidation, and of being fixed upon the fibre.

TO PREVENT SILVERWARE FROM TARNISHING.

Solid silverware, as well as plated goods, grow dark and tarnished in a very short time when exposed to the air, and even when put away in a dark place. This is especially the case where hard coal is used in the house or neighborhood, as the sulphur in the coal, liberated by the heat, is sure to stain all the silverware within reach. This annoying tarnishing can be entirely prevented by painting the silverware with a soft brush dipped in alcohol in which some collodium has been dissolved. The liquid dries immediately and forms a thin, transparent and absolutely invisible coating upon the silver, which completely protects it from all effects of the atmosphere, &c. It can be removed at any time by dipping the article in hot water. This recipe has been in use for some time in the large establishments at London, where most of the goods in the show-cases are protected in this manner.

J. H. DE BUSSY,

General Agent for Holland and the Dutch East Indies for THE AMERICAN MAIL AND EXPORT JOURNAL, THE PAPER TRADE JOURNAL, THE AMERICAN STATIONER, THE MILLERS' JOURNAL, and Publisher of THE INDIA MERCURY, will represent these journals at the **INTERNATIONAL, COLONIAL, AND GENERAL EXPORT EXHIBITION**, to be opened in **AMSTERDAM** on the **FIRST OF MAY, 1883.**

He is prepared to act as Agent for American Manufacturers desiring to exhibit, and can guarantee that their interests will receive careful attention.

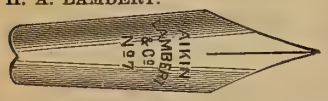
LINEN LEDGER AND RECORD PAPERS

WHICH WILL STAND THE SEVEREST TESTS OF ERASURE AND RE-WRITING,

being double Sized and Loft Dried. These Papers possess unusual strength and beauty, and contain a sizing that resists the severest erasure and re-writing tests. Every ream is Water-Marked with Name, and put up with Binders' Boards, trimmed perfectly square, and ready for Ruling Machine.



SILVERING IRON.

A manufacturer in Vienna employs the following process for silvering iron: He first covers the iron with mercury, and silvers by the galvanic process. By heating to 300° Centigrade, the mercury evaporates and the silver layer is fixed. Ironware is first heated with diluted hydrochloric acid, and then dipped in a solution of nitrate of mercury, being, at the same time, in communication with the zinc pole of an electric battery, a piece of gas carbon or platinum being used as an anode for the other pole. The metal is soon covered with a layer of quicksilver; is then taken out and well washed and silvered in a silver solution. To save silver, the ware can be first covered with a layer of tin; one part of cream of tartar is dissolved in eight parts of boiling water, and one or more tin anodes are joined with the carbon pole of a Bunsen element. The zinc pole communicates with a well-cleaned piece of copper, and the battery is made to act till enough tin has deposited on the copper, when this is taken out and the ironware put in its place. The ware thus covered with tin, chemically pure and silvered, is much cheaper than any other silvered metals.

The Bank of France has just issued a new hundred franc note, which will circulate concurrently with that at present in use. In order to diminish the risk of counterfeiting, the new note has two water-marks, designed to represent, the one a head of Ceres and the other a head of Mercury. The printing, like that on the Bank of France notes, is in blue ink, and on the face are allegorical figures of Agriculture and Navigation, while on the reverse the most conspicuous design is a group representing Fortune and Minerva.

Men approve decision of character though it be against them, and despise a time-server and trimmer.

Power Embossing PRESS.

THIS is a powerful and simple machine, and is complete in every respect. The power can be thrown off and a break stops the bed instantly, thereby saving any covers or expensive plates from being damaged. The press is worked by a cam and toggle; the impression is regulated by bevel-cut gears on top, and the bed platen can be run up or down by hand-wheel on left side. Our new method of using steel rods makes the press much stronger than iron cast frames. It has a movable bed; can be used for steam or gas heat; is supplied with oil cups. This Embosser is strong and large enough for all regular work in a bindery.

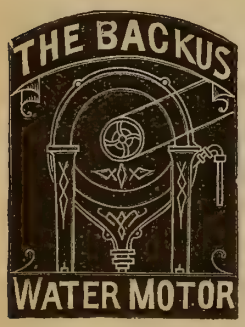
Space between upright rods, 17 ins. Size of head, 9½ × 13½ ins.

PRICE, $375.00.

OVER 20,000 SOLD BEFORE OCT. 20th.

Mrs. DORR'S LAST PRODUCTION.

"Santa Claus Souvenir."



NOT A BOOK BUT A NOVELTY FOR THE HOLIDAYS.

Something New, Rich, Neat and Novel. Each one in White Envelope; 25 in a Box.

THE reputation of the Author is sufficient to guarantee a very large sale, and Mrs. Dorr has received contributions for the Souvenir from well-known writers, among which are Paul H. Hayne, Constantine E. Brooks, E. C. Stedman, J. J. Piatt, R. H. Stoddard, Henry R. Dorr, Mrs. Mary E. Bradley and others. The above cut gives the shape (but not the size) of front cover. Size, 9¼ × 5¼ inches. Both front and back covers are Lithographed in **Nine Bright Colors and Embossed,** so that the cut gives but very faint ideas of the beauty of this salable novelty. The inside 12 pages, printed in two colors, on tinted paper are all cut out the shape of Santa Claus. Price of this Gem only 50 cents. White Looped Silk Fringed, with Protector, 90 cents. Sample copy mailed any DEALER on receipt of price. It is not a book, but a novelty that every Stationer, Bookseller, Fancy Goods and News Dealer can sell. We can deliver large quantities in New York City. It will sell in every State in the Union for the beauty of the work, reputation of author and popular price. Liberal Discount to Dealers. When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

BOOK ILLUSTRATION, OLD AND NEW.

BY J. COMYNS CARR.

(Continued.)

To follow the subsequent fortunes of engraving in wood would require a separate consideration of the art of Italy, and the North; but it may be said, generally, that as Germany had been the first to encourage the engraver's art, so also it produced, in a more mature period of its development, the finest and most interesting specimens. It has been sometimes doubted whether Albert Durer was himself an engraver on wood, but it is certain his great genius must have powerfully influenced the practice of this branch of art. No man ever possessed a finer instinct for the varying conditions under which his designs were to be reproduced; his mode of technical execution for engraving on copper has been a model to all the world since his time, and in like manner he exhibited an equal judgment in the management of designs destined for reproduction on wood.

Many of the wood-blocks executed at this time far exceeded the limits of book illustration. Such, for example, are the series of designs by Durer, for the triumph of Maxmilian, who was himself a constant patron of this branch of art. At the same time wood engraving received a new development, by the invention of the system known as *chiaroscuro*, of which the earliest example is found in the reprint of the "Repose in Egypt," by Lucas Cranach. This mode of engraving, which consists in the use of two or more blocks, so printed as to imitate the effect of a washed drawing, may be taken as indicating a new departure in the wood engraver's art. It marked the first attempt to make wood engravings a means of reproducing pictorial effect, and although in itself sufficiently simple, it may be reckoned as the source and origin of the many modern efforts in the same direction. In fact, in its modern application, wood engraving has almost ceased to possess distinct claims of its own. It is employed as a means of reproducing drawings in wash or color, or to imitate the free and careless handling of a pen-and-ink sketch. The result has been that the wood-block has lost its distinctive character of fitness for its place in a printed volume. It is true that the earliest wood-blocks were *facsimile* reproductions of an artist's design, but then the artist labored with a definite view of the process by which his work was to be translated and of the place it was destined to fill. He preserved in his design something of the abstract character that belongs to printed type; the lines by which he expressed his thought were few, simple and severe; he sought for no suggestion of color, nor did he strive for great depth or variety of light and shade. It is a characteristic of all early engravers, a characteristic specially marked in the early wood-blocks, that they are founded rather upon the principles of sculpture than of painting. The light and shade are evenly balanced over the whole composition, subtleties of local color are neglected in favor of a clear, sharp definition of broad effect, and the result appeals more by beauty and balance of form, and by truth and simplicity of character, than by labored difficulty of executive skill. It may, perhaps, be said, that wood engraving of this earlier and nobler kind reached its highest perfection within ten years of the time of Durer's death.

The "Dance of Death," which may be taken, all things considered, as the very finest specimen of the art, in existence, was published at Lyons, in the year 1538, and Holbein's designs to the volume may be taken to sum up, in a form of supreme excellence, those principles in the engraver's art that had been gradually developing themselves in the previous hundred years.

"So admirably," says Chatto, in his treatise on wood engraving, "are those cuts executed, with so much feeling and with such perfect knowledge of the capabilities of the art, that I do not think any wood engraver of the present time is capable of surpassing them. The manner in which they are engraved is comparatively simple, there is no labor and unnecessary cross-hatching were the same effect might be obtained by simpler means; no display of fine work merely to show the artist's talent in cutting delicate lines; every line is expressive, and the end is always obtained by the simplest means. He wasted not his time in mere mechanical execution, which, in the present day, is often mistaken for excellence. He endeavors to give each character its appropriate expression, and in this he appears to have succeeded better, considering the smaller size of the cuts, than any wood engraver either of times past or present." This estimate of Holbein's work is certainly not extravagant, and yet, if it be taken to be just, we must admit that the modern wood engraver has departed very far from the ideal which Holbein set before himself. Certainly, in the mass of work now produced, there is very little trace left of the principles upon which Holbein labored. Instead of proceeding by the simplest means, our modern artist seems rather by preference to take the most difficult and complex way of expressing himself. A wood engraving, it is not unjust to say, has become scarcely distinguishable from the steel engraving, save by its inferiority. It strives after equal complexity of color and tone, although the resources at the command of the artist are by no means fit for the attempt. When it appears in a printed volume, the modern wood-cut looks for the most part like an unsightly stain upon the page. It bears no relation to the text which surrounds it, and which it is assumed to illustrate. The heavy mass of deep tone seems to make a hole in the page, and however we may admire the quality of the work, judged apart, and on its own merits, we are bound to confess that it has been produced without consideration of the conditions under which it is to appear.

The original cause of this decline in the art has been already indicated. Envy of the effects proper to another mode of expression is the death of every art. Literature cannot reproduce the beauties proper to painting or design. Sculpture, whatever claims of its own it may possess, is powerless to give us the glow and color of a Titian; and in like manner the wood engraver, so far as he sought to replace himself in competition with the engraver on copper, found that he was parting with the beauties peculiar to his own craft, without securing those that belong to another. During the latter part of the 17th century, the art may be said to have reached its lowest point, and the only book illustration of the 18th century that deserves much consideration, consists of delicate copper-plate engravings, produced by the French artists of the time.

These steel plates, it must be confessed, are often most skillfully introduced into the text, so as almost to produce the impression that they belong to the same process of printing, but I do not propose, whatever their merits, to discuss this class of illustrated books this evening.

Book illustration, as an art, as I have already said, is founded upon wood engraving, and it is to wood engraving we must look if we are to have any real revival of the kind of beauty which the early printed books possess.

If we look back, then, upon the condition of wood engraving during the period of its prosperity, we shall find certain clearly marked characteristics which specially fit it for association with printed books. We find, in the first place, that the artist, partly perhaps from limited resources, but much more from innate and trained sense of the requirement of his task, constantly preserved such a simplicity in his workmanship, that the result found happy companionship with the printed page. With the example of the illuminated manuscript still fresh in memory, he treated the page of a printed book as an entire composition into which the picture was not to overbalance or oppress the remainder.

[To be Continued.]

A NATURAL INK.

At the bottom of a copper mine at the foot of Kennesaw Mountain, in Cobb County, Ga., a peculiar liquid of a deep wine-color is constantly collecting. The color, odor and taste of this fluid, though strange enough, are not its most singular characteristics. It has been found that, when a few drops of nut-gall are added to it, the fluid turns jet black, and at once becomes ink of the best quality. Judge Hammett is authority for the statement that the records of the country are kept in this natural ink, which neither freezes, fades or corrodes.

A new autographic printing method, by Mr. Crocker, of Tasmania, is described in the *South. land Times*. The basis of operations is common-window glass—a most unlikely but perfectly reliable material to withstand the rumble and roll of modern printing machines. A solid ink, composed of beeswax, resin and lampblack, is made in proportions about which there is no secret. The drawing medium is a common steel pen, with this important adjunct, that it is constantly subjected to the action of a very tiny jet of gas, or an electric spark, which keeps the pen hot. It is inserted in the stick of ink, and its heat at once dissolves a "dip." The artist now proceeds to sketch on the glass, the fluid ink running as freely as necessary, but the instant it leaves the pen it again becomes solid, and adheres to the glass without blurring or running. As a consequence, shading of any intensity may be executed without risk of forming one big blot. The plate is now ready for an "engraver" whose hand is more potent and swift than that of any of his predecessors. This is hydrofluoric acid, a chemical well known as being about the only "eater" of glass known in practical chemistry. A small portion of this is poured over the face of the glass, and in a very short space of time eats its way downward. The ink, however, defies the acid, and the glass below the sketch therefore remains intact. All that now remains to be done is to mount the slip of glass on a metal block of the same height as printers' type, where it is secured with a little shellac, and the engraving is ready for the printing press.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**

Each sheet is water-marked with name and date.

Correspondence.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., November 20, 1882.

As to the Harpers' establishment in this city, the amount of the whole thing is that H. W. Derby, of Columbus, has leased 110 feet front on Fourth street, this city, in which he will sell Harpers' books on commission. At all events, I learn as much from Mr. Derby's next friend and former partner in business. Derby, it is said, has always been able to get a better discount from the Harpers than anybody else. It is supposed this will also be a school-book depository for the Harpers. This explains the first manifestations, no doubt. There are some business men here who surmise that this beginning is a mere feeler of the entering wedge species, and that if things are propitious it will bud and bloom, in good time hereafter, into something formidable.

There is a feeling here, warranted by the sustained experience of the past three or four years, that the South is developing rapidly, and that Cincinnati is the key to the trade of the leading States of the South. This view of the situation is influencing manufacturing enterprise here in the way of stimulating it. The multiplication of railroad facilities in every direction from this centre has never been so rapid as within the last three or four years.

Sales of books—good, solid reading, the sort to build up men—have been large during the last week. A splendid $2,500 lot was sold by Robert Clarke & Co. to the Evansville Public Library. Private individuals also are buying freely, selecting the best English classics and standard works for home libraries.

All of the windows are now aglow with a gorgeous aurora borealis of holiday cards. It is astonishing that they are so fresh, varied and beautiful. But there is no limit to invention, especially in art.

Here in Cincinnati to-day are four art potteries, each one of them a school of instruction to which ladies throng every day in the week. They are for the most part ladies of leisure who want to cultivate their taste for the beautiful. But there are among the number young girls training for industrial decoration. The University School of Design is full to overflowing in all its departments — drawing, modeling, painting and wood-carving. All of the private studios of the best artists are full of pupils. Matt Morgan has just started a night school for life studies of nude figures, to which several "ladies in earnest" are admitted. The greater number of his pupils are enthusiastic artists. There is an ambition here to excel in industrial decorative art—a zeal of the sacred fiery sort, and the fire in it doesn't die. It is one of these flames fed everlastingly by vestals who will not suffer it to die. Right here is the point of the whole matter. This amateur work is not mere dilletante recreation and nothing more. It is this amateur work by the rich, which, in building up the public taste and disseminating a love for the really beautiful, that is creating and upbuilding and diffusing a demand for good work by decorative artisans and artists. Nobody asks any more, "What is the good of all this amateur work in art?" Dealers in Christmas cards find the public taste nowhere more than here growing more discriminating and exacting in the demand for superior art merit in the Christmas and other holiday cards. It has the effect to make the sale of these and other goods vastly better and larger. The demand for fancy stationery is growing for the best qualities, while the call and sale for "fantastic" goods grow beautifully smaller.

Reports from all quarters concur in the statement that farmers are holding their grain for higher prices and delaying the flow of business, but that there will be a rush probably late in December or early in January, and a corresponding boom in business. Collections are a little slow, but the business for the season aggregates better than was expected from the impression it made on dealers from day to day before the striking of the balance-sheets.

Among trade visitors present during the past fortnight were H. S. Maddock, of Hextograph Company; J. B. Gunn, of E. Faber; Mr. James, of Daniel Slote & Co., New York; Mr. Tyner, treasurer of Holyoke Envelope Company, Holyoke, Mass. The handsome and elegant twins, Marks Brothers, of the Dixon Crucible Company, were here also, showing examples of one indication of good times, in the fact that some of the traveling men wear three different suits of clothes daily and carry in trunk-trays even 144 neckties.

PRINCE WILLIAM.

CHICAGO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS,
8 Lakeside Building,
CHICAGO, Nov. 20, 1882.

It is some weeks now since last Chicago lifted up her voice in these columns, but, meanwhile, the world has moved despite her silence. The "boys" have come and gone, some full of orders and satisfaction, and others scarcely so well contented. Generally speaking, business is satisfactory here, though not as overwhelming as it was last year. One cannot expect it always to pour, but should be contented with good honest showers, if they come in the regulation number and quantity. Besides, last summer's trade was remarkable, and the usual difference between summer and fall business would amount this year to a boom. Many elements, principally the weather and the political excitement, have tended to backen the commercial season; but it is coming, and no one seems despondent so far, and the holiday trade is always to be counted on.

Among general and special news, accept the following:

A new enterprise, in the shape of a Presbyterian book store, is announced to be opened this week at 137 Wabash avenue, the manager being C. A. Whiting.

H. D. Chapin does not know what dull times mean; he is busy from early morning till late night, and yet complains not. His last move in the picture line was to secure the exclusive agency of the Langtry plaque in this city, and the sales so far have been enormous, and are still increasing.

M. C. Brennan, who, if memory serveth, has been mentioned before in these columns, has been arrested by his late employers, Rand, McNally & Co., on the serious charge of having "bilked" them out of about $200 worth of goods. The manner of the fraud is stated as being very neat, he having, it is claimed, taken out goods on spurious orders.

The large printing firm of W. P. Dunn & Co. has recently consolidated with itself the printing office of Tranter Brothers, and removed from 202 Clark street to more suitable quarters at 57 Washington street. It has now an office 50x190 feet, into which it has put $10,000 worth of additional type and material.

McAllister & Co. are doing a lively business in the fancy card line. Their salesman, Sullivan, who was spoken in Minneapolis last week, reports a rush, which is rapidly increasing. Among the latest shape novelties of the house are: No. 3,069, coffee or teapot, with flowers; No. 3,094, whisk broom; No. 3,097, tambourine, Red Riding Hood; No. 3,098, palettes, floral landscapes, two designs.

It is said that the Marseilles Paper Company will pay about fifty cents on the dollar. The collapse of this company was not wholly unexpected, though many persons were surprised at the event. However the case may turn out, permit a conclusion, which is, that Paul D. Hayward, the secretary of the unfortunate company, was as much in the dark concerning the real state of affairs as any of the public; for

the gentleman is universally respected and esteemed.

Have you seen the following item in the dailies: "William C. Clarke, of the defunct Chicago firm of Clarke, Friend, Fox & Co., appears in print again. Richard L. Campbell and Augustine Smith have brought a suit in the Supreme Court against William C. Clarke and others, in which Clarke has been held to bail in $4,000 upon an order of arrest granted by Judge Donohue. Mr. Smith's affidavit says that the firm of Clarke, Friend, Fox & Co., of Chicago, dealt with the plaintiffs' firm, doing business as paper dealers, and that the firm were induced to sell goods to the defendants by the representations of Clarke that his firm was responsible, and that Friend, who died, had by his will left his property at the control of the firm; that by these representations, which turned out to be false, the plaintiffs were induced to sell to the defendants goods to the amount of $35,000; that Fox, who now has charge of the assets of the defendants' firm, says there was a deficit of $220,000, and that this money was used by Clarke for his own purposes."

The Novelty Card and Advertising Company, J. B. Clarke, manager, has almost doubled its trade since it last received mention in these columns. It is now agent for Carter, Rice & Co.'s extension card album and the Robinson Company's folders. This year's line of Christmas and New Year novelties is unique and fine and is securing a ready sale.

In addition to the full equipment of edition bookbinding machinery lately purchased by Coonkey & Lawrence of Geo. H. Sanborn & Son, that enterprising firm has lately added to its extensive establishment two of Sanborn's Star cutters, 30 and 38 inches respectively. Sanborn has also recently furnished an elegant 48-inch Star cutter to A. J. Cox & Co.

Not long ago, some remarks were made in this department, complimentary to the improving style of Chicago printing. The English *Printing and Paper Trades Journal* has noticed the same fact, and in its issue of September compliments Brown, Pettibone & Kelly on a little book recently printed by this firm, in memoriam of three deceased members of the Illinois Club—Sextus N. Wilson, Alexander C. Bell and Charles C. Dana. Among other very flattering remarks, the English writer says: "The press-work is in the first-class style so characteristic of the best American work." The mystery remains how the book ever found its way across the water.

A new concern, to be known as the Chicago Paper Company, will be on the *tapis* by January 1. The incorporators are: President, H. E. Meade, of Dayton; secretary, A. T. Hodge, of Hodge & Co., this city, and treasurer, W. C. Gillett, of H. E. Meade & Co. The concern has secured fine manufacturing facilities, and all of the incorporators are experienced in the business, so that success may justly be expected. The lines carried will include book, print, colored and writing papers.

E. P. Donnell & Co.'s new illustrated catalogue of improved tools and machinery for printers, bookbinders and paper-bag manufacturers, is to hand. The list is very complete, and covers over 60 pages, 10 by 14 inches, and is brimfull of large-sized illustrations of Donnell's favorite improved machinery and devices; in fact, there is scarcely a tool or machine mentioned herein that does not comprise some special improvement by this enterprising firm. The catalogue is claimed to be the most complete ever issued in the interests of this line of trade. It will be sent on application.

The new art stationery department of Mermod, Jaccard & Co., St. Louis, flourishes surprisingly under the management of C. H. Longstreth, and has already achieved for itself a reputation. Mr. Longstreth has very fine taste, as is exhibited by the window of his department, from which some of your recent correspondents on "window decorations" might gather some valuable new points. A most expensive and elegant advertising novelty has just been issued by the department in the shape of sample sheets of engravings, embossing and illumination. It is too fine for a simple advertisement, and deserves preservation as a piece of art.

Snider & Holmes, St. Louis, Mo., have just issued a tasty and complete "vest-pocket" catalogue of papers, cards, &c., which ought to be in the vest pocket of every buyer in these lines.

The Burton & Skinner Stationery Company, St. Louis, has made several recent improvements on the "Elwood File," the most important of which is binding the edges with cloth. The advantage is obvious.

Henry B. Pettes & Co., St. Louis, succeed Pettes & Leathe (paintings, engravings, and artists' materials), who were burned out last spring. Their new store, at Sixth and Olive streets, is a fittingly artistic warehouse for this class of goods.

John J. Daly & Co. have opened a new store at 211 North Second street, St. Louis. Robert W. Daly is starting a manufacturers' agency at this point, which should meet with favor from Eastern manufacturers. He will handle inks, tags, &c., and is the man to push the goods he handles. Manufscturers might find it of interest to communicate with him on the subject.

Black & Clawson, Hamilton, Ohio., recently shipped a 24-inch perforator to Weed, Parsons & Co., Albany, N. Y. There is no point far enough distant to escape the enterprise of this concern.

How is this, once more?—The Sanford Manufacturing Company has just sent an order of $500 worth of ink vents to Peru, and this entirely through the little advertisement of the same in these columns. Further orders of ink are promised from the same source. G. B. H.

TORONTO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, Ont., November 17, 1882.

The announcement of the death of N. Ure, one of our leading booksellers, a few days ago, was an event so sudden and unlooked-for, that his friends could hardly realize that it was possible. He left his place of business in the afternoon, not feeling well. Early in the evening his physician was called in, and on leaving Mr. Ure said, "I shall see you again in the morning, doctor." The doctor, after some hesitation, replied, "No; it will not be necessary," and then informed him he would not live until morning. The few brief hours left were spent with his wife and solicitor in arranging his affairs. Mr. Ure, who was formerly a partner of Dawson Brothers, Montreal, recently came to this city and purchased the business of Hart & Rawlinson. He was a young man, only thirty-seven, thoroughly up in his business, and highly esteemed by those who knew him. The business is advertised for sale.

George Chater, Jr., of Grosvenor, Chater & Co., London, England, spent the most of last week in this city. I had the pleasure of introducing him to the trade here and spending considerable time with him. While he evinces, as the French put it, *bonhomie* with those he comes in contact with, Mr. Chater has an eye to business. He is highly pleased with what he has seen in the United States and Canada, and regretted that he had not more time at his command. He left here for Niagara and Chicago, and returns to New York, whence he sails, *via* Washington, Philadelphia and Baltimore.

I. Oberhaltzer, bookseller, &c., late of Berlin, Ont., established himself here over a year ago as a publisher of subscription books, &c. He had some capital when he came, and was considered, in a limited way, a safe man. Things, however, seemed to grow crooked in the meantime, and a short time since he skipped, leaving liabilities of over $13,000, and assets of about one-fourth the amount. As we have no bankrupt law, the first in the field has the best chance; and in this case the largest creditors, who took proceedings at once, will get nearly if not quite all their money, and the balance will get—nothing, which Webster says means "No importance, no value, no use, &c." This fact, I am sorry to say, a number of people have discovered.

David Doud, law stationer, &c., of this city, has called a meeting of his creditors.

Lancefield Brothers, booksellers, &c., Hamilton, have failed, and the business will most likely be closed. I have been informed that their estate will pay twenty to twenty-five cents on the dollar.

In the STATIONER of October 26 I noticed, "Married—Howard Lockwood," &c. I had taken it for granted that such a good specimen of the *genus homo* as your worthy chief had been captivated long ago by some fair she; but I was mistaken. It is not the first time, and I take the first opportunity of offering my congratulations.

James Grand, late of Perry & Grand, printers, opened last summer a store in Leader lane, for the supply of office stationery and requisites, and is working up a fine trade. Mr. Grand is an active, pushing young man and is pretty sure to succeed.

The charming weather we have had this autumn, without a break almost, came to an abrupt termination last night, and this morning we have several inches of snow. C. H.

A copy of a work printed by Caxton, being the English version of the celebrated French mediæval romance of the "Four Sons of Aymon," has been, a correspondent says, for some time known by minute Caxtonian scholars to be in existence in Earl Spencer's library, at Althorp. In default of the printer's name, the place, or the date, the period of A. D. 1490 has been assigned to it as an approximation. No other copy is known to be extant, and its scarcity may be estimated by the fact that no mention of it occurs in the pages either of Ames' "Typographical Antiquities," or of Dibdin's "Bibliographical Decameron." Under these circumstances of rarity, even the most fragmentary occurrence of the "Four Sons of Aymon," is an event calculated to move the whole world of bibliography. Three leaves, or six pages, of this work have just come under observation, which have owed their preservation to having been used as part of the binding of a volume bearing a later date of the fifteenth century than the "Four Sons of Aymon" itself. The seeming contemporaneous contempt of what the nineteenth century agrees to consider as precious, is traceable to the fact that Caxton's works became prematurely acquainted, and so relegated to comparatively vulgar purposes, in consequence, not only of the change of language which the introduction of printing accelerated or initiated, but of the change which took place so soon after Caxton's time from black letter to the ordinary typography of modern times.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President. **DALTON, MASS., U. S. A.** JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show.

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS

LINEN LEDGER PAPER

Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

Being **Triple Sized** (a process entirely our own) and **Loft Dried,** can be erased and written upon the fifth time distinctly. None genuine without the water-mark, thus—**Old Berkshire Mills Linen Ledger,** and date.

CARSON & BROWN CO., Manufacturers.

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

THE previous success of our Cards, it is confidently expected, will be fully sustained, if not increased this season, an expectation which is already verified by the large advance orders received, justifying our increased efforts to bring out a line superior to all our previous productions. Our line will again comprise Double and Fringed Cards as well as Heavy Mounts. All the Fringed Cards will be provided with protectors, and envelopes will be furnished for all cards costing $1.80 and upward. The names of the artists who have contributed designs are a guarantee of the excellence of our Cards. We will name only the following :

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,

MISS F. BRIDGES,
MISS ROSINA EMMET,
THOMAS MORAN,
ALEXANDER SANDIER,
R. G. BIRCH,
GEO. J. BARNES,

MISS DORA WHEELER,
MISS FLORENCE TABER,
FREDERICK DIELMAN,
HARRY BEARD,
F. SCHUYLER MATHEWS,
H. P. KENDALL.

The literary matter in connection with our designs has been carefully attended to, among others, by MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

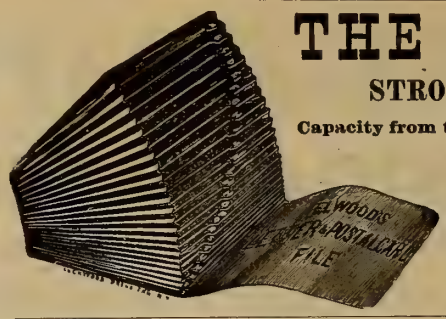
Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

THE "CHICAGO" BRASS RULING MACHINE.



The ruling machine is, after the printing press, one of the most important aids to modern business; hence a great deal of inventive genius and mechanical skill has been brought to bear in making it as near as possible perfect in construction and detail. But even with all the care that has been spent upon it, the modern ruling machine is not yet absolutely faultless. Wooden machines are said to warp and get out of "true." E. P. Donnell & Co., of Chicago, have just invented and put upon the market a machine which they claim to be "the best ever invented," and as near perfection as it is possible to come with modern materials. The new "ruler" is made entirely of brass, beautifully finished, and the frame being metal, of course it will not warp under any conditions. Another novel feature is the newly-invented "radiator cylinder," to heat either by gas or steam, which dries the ink instantaneously, without affecting the paper. This allows the machine to be shortened, so that one of Donnell's rulers occupies only about half the space of an ordinary machine. An adjustable revolving ink-box is also attached, which allows the "ruler" to have the inks as close to the beam as may be desired. The latest improved Collins "striker," with a patent bar attachment, which, it is claimed, enables this "striker" to do more work than any other on the market. Simplicity and durability are also claimed among its special merits. The machine is certainly very handsome in appearance, and there is no reason why it should not prove a vast improvement on its predecessors. It is claimed that the peculiar construction of the beam prevents all possibility of the ink running together, and that it will perform absolutely true registering work; all of which claims are endorsed by those using it. Further particulars can be had by addressing the manufacturers (asking for their new catalogue), E. P. Donnell & Co., 196 Clark street, Chicago, Ill.

NEW PATENTS.

No. 266,366. Chronometric Stamp.—Benjamin B. Hill, Springfield, Mass.

1. In a chronometric stamp, a die-plate provided with one dial-die having characters representing the hours of the day, a second dial-die having characters indicating the minutes or divisions of the hour, each of said dies being provided with a recess to receive an index-die, in combination with the index dies having their acting faces on the same plane as the acting faces of the dial-dies, each index being by a time movement turned in a separate recess surrounded by a different dial-die, and each index being set in a separate bearing adapted to support said index against the force of the impression in printing independently of the other index-dies, and a device constructed to press upon said dial and index dies.

2. In a chronometric stamp, an impression device, a time movement, a die-plate provided with meridian, hour and minute dial-dies, and meridian, hour and minute index-dies, each index-die working in a separate recess in a different dial-die, nnd supported on its own centre independently of the others on the same plane as the dial-dies, and each connected with the time movement by wheels as large, or nearly so, as the periphery of the dies.

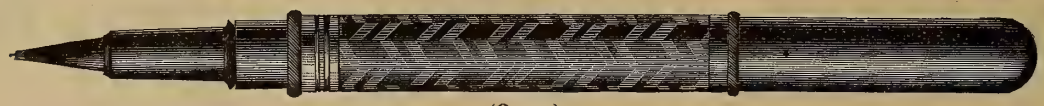
THE LIVERMORE STYLOGRAPHIC PEN.



(Full Size.)
Patented January 4, 1881.

Endorsed unanimously by the Trade as giving perfect satisfaction to their customers. Many say "It is the only Stylographic Pen worth having at any price." More of these goods are sold and used than of all others combined. They always command a ready sale; try them.

(Closed.)

(Open.)

Our New Pen, "THE MONARCH," has the reverse case—closing up short for the vest pocket—holds a large quantity of ink and is made very strong and substantial.

LIVERMORE'S STYLOGRAPHIC LEAD PENCIL.

(Full Size.)
U. S. Patent, September 13, 1881, also patented in foreign countries.

This Pencil is the greatest novelty of the season; contains valuable features never before combined in any lead pencil. It sets the lead automatically, ready for use, and by a single motion the lead is retired within the case after using. It is the most substantial Pencil ever produced, is handsomely made with Hard Rubber Case, Nickel or Gold-Plated Trimmings, as desired. It sells at sight.

The demand for the above goods is constantly increasing, due entirely to their superiority over all others. They are made by the Stylographic Pen Co., of Providence, R. I., who own and run the Largest Factory in the World devoted entirely to this class of goods.

STYLOGRAPHIC INKS,

Especially adapted for Stylographic Pens,

IN COLORS, BLACK AND COPYING.

Now in use in over Half a Million Stylographic Pens, and unexcelled for general use.

"ABROAD."

Owing to the great success of **"At Home"** last season, we have this year issued the **New Art Gift Book—"ABROAD"**—for the Holidays; to be of uniform size and a companion piece of **"At Home."**

"Abroad" far surpasses its companion both in **Decoration and Illustration.** Each page being a study in itself. The quaint little English Children are in this Book represented on a tour of pleasure through France. Those who have been "Abroad" cannot fail to recognize the beautifully executed drawings of places of interest. The appropriate verses accompanying each illustration make this work a handsome memento and Holiday Gift. Decorated by THOS. CRANE. Illustrated by ELLEN HOUGHTEN.

Price, $2.50. "AT HOME" published this year at $2.00.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Gilbert E. Curry, publisher, New York city, is dead.

McCarty & Hasberg are offering bargains in holiday goods.

H. C. Mosely, publisher of the *Times*, Van Buren, Mo., is dead.

E. C. Budlong, paper-stock dealer, Providence, R. I., has been burned out.

John B. Dryden, newsdealer, Frankfort, Ky., has been burned out; insured.

Ward Brothers, paper manufacturers, Riverton, Conn., has been burned out; insured.

William Eversman, fancy-goods dealer, Chambersburg, Pa., has been sold out by the sheriff.

H. M. Stimpson & Co., publishers of the *Journal*, Newtown, Mass., has sold out to George H. Pratt.

Henry Levy & Son have still a few choice parcels of fancy goods, which they will close out at an advantage to buyers.

Edward J. Bicking, printer, Philadelphia, has been sold out by the sheriff, business continued under the style of L. Bicking.

E. & H. T. Anthony & Co. show pictures of Mrs. Langtry in the characters of *Juliana*, in Tobin's comedy "The Honeymoon," and in *Rosalind*.

The firm of Willy Wallach denies the statement that all of the insurance has been paid to the firm. Only six of the nineteen companies have settled.

H. L. Crandall & Co., paper-stock dealers, Hopkinton, R. I., have dissolved partnership. H. L. Crandall retires, and S. C. Carr and G. B. Carpenter continue.

Frew & Campbell, publishers of the *Intelligencer*, Wheeling, W. Va., have admitted to partnership Charles Burdett Hart, under the style of Frew, Campbell & Hart.

H. M. Bristol & Co., booksellers and stationers, St. Paul, Minn., have dissolved partnership, and have formed a new firm by admitting Russell Freeman—business being conducted under the old style.

Janentzky & Co., Philadelphia, report a very good trade in artists' materials. Their assortment of plaques, mirrors, and Christmas and New Year cards is the most complete that they have ever had. They are selling a great many palettes in satin, of different shades, for painting. These are the latest novelty.

The three best specialties of the former Providence Inkstand Company—the brush erasers, portable vacuum inkstands, and the perfect pen-gage stands—are now to be had only of the Library Bureau, 32 Hawley street, Boston. This new concern has as manager Melvil Dui, who organized and had sole charge of the Readers and Writers' Economy Company during its two years' of growth and prosperity. Dealers who sold any of the old specialties will find headquarters for most of them with the old manager at the Library Bureau. The 100 pages of its new illustrated catalogue are worth careful examination, especially at this time, when really useful novelties are in such demand for gifts.

Langfeld, Turner & Andrews, manufacturers of leather goods, Philadelphia, have just sued W. L. Martin, Cambridgeport, Mass., for $25,000 damages for interfering with their customers, who have bought so largely of pocket-books, bags and purses with the knob fastener. It is said to have been proved that W. L. Martin, who claims to have a patent for the fastener, has no such patent, and that he has made himself liable to large damages by his effort to injure the business of Langfeld, Turner & Andrews. This firm has sent to the trade the following circular: "In regard to patent fastener for bags and pocket-books, we have to say that if you will purchase your goods from us in this line we shall hold ourselves responsible to protect you from loss and damage in any litigation that may be brought against you by any person claiming a right of royalty."

L. Prang & Co. will soon have ready their samples of valentines and Easter cards, and the firm's travelers will start on the road with them early in December. The sales of Christmas cards are far ahead of those last year. The line of new birthday cards is now complete, and the demand for them is very heavy. All of the other novelties which the firm has been for some time preparing are ready for delivery, and the house is pulling up on back orders. Dealers who wish to secure goods in due season had better place their orders without delay, as some of the editions are running very low.

J. H. Bufford's Sons have introduced a line of novelties in the shape of New Year cards. They come in plaques and palettes, and are illuminated with hand paintings and raised figures in brilliant colors. Among other new things are a line of advertising cards in six designs, each representing a slate and pencil, and a line of calendars in the form of shape goods. The Easter and valentine lines are now ready. They are rich and rare, and a full description of them will appear in a future issue of the STATIONER.

G. P. Putnam's Sons carry a very full and attractive stock of fine writing papers of the best makes, and have their stationery department so organized that they can meet all demands, from the largest to the smallest. They make a special feature of engraving and plate printing.

Joseph A. Hoffman, San Francisco, is introducing a new line of "æsthetic" mottoes for Christmas and New Year household, church and Sunday-school decoration.

Morris & Sweely, publishers of the *Sunday Traveler*, Pittsburg, Pa., have dissolved partnership and have been succeeded by Morris & Lare.

Aikin, Lambert & Co. are being pressed hard to fill their orders in time. Several new styles have recently been added to the firm's line.

The New York Pictorial Printing Company has published some new and attractive designs in advertising cards.

The stock of Lancefield Brothers, booksellers and stationers, Hamilton, Ont., has been sold at auction.

Rastall & Brownell, printers and publishers, Orangeville, Ont., have sold out to R. Lees.

J. J. Meston, bookbinder, Portland, Ore., has admitted N. S. Dygert to partnership.

Joseph Patterson, of Patterson & Neilson, publishers, New York city, is dead.

Sinclair & Michael, bookbinders, Stamford, Conn., have dissolved partnership.

Maurice Harrigan, of Cameron & Co., printers, New York city, is dead.

D. H. Doust, law stationer, Toronto, Ont., has made an assignment in trust.

William Close, newsdealer, &c., Lawrence, Mass., has sold out to B. L. Weeks.

C. E. W. Strune, stationer, &c., Lincoln, Neb., has sold out to A. T. Deming & Co.

The St. Paul Book and Stationery Company has a special bargain list—to the trade only—of holiday books.

The right, title and interest of John Tetlow, in the firm of Lewis Pelouze & Co., typefounders, Philadelphia, Pa., has been advertised to be sold by the sheriff.

W. Cleveland Herrick, Geneva, N. Y., late with Benj. D. Benson, 27 Maiden lane, has been out of business since last January, on account of severe illness. He is now quite well again, and is ready to accept the first favorable offer for employment.

The Birnie Paper Company, Springfield, Mass., reports a good increase of business. Orders are coming in fast, and it is shipping to all parts of the country. It has recently added some new machinery and a number of new hands, and has been working nights right along.

Obpacher Brothers' line of Easter and Valentine cards is one of the most beautiful ever shown in the American market. The designs in both lines are all original and very appropriate. One of the series of Easter cards consists of three designs, each representing a dove perching on boughs among spring blossoms of bright hues.

The attention of stationers and art stores is called to the advertisement of the Chicago Picture Company in this issue. This company now has a complete line of "art photographs" ready to supply the trade. They are mounted nicely with title lettered in gold, and are finding a ready sale. The trade should send for samples of the two sizes, and be convinced of their merit.

Cline, Miller & Co., paper dealers, 26 South Seventh street, Philadelphia, being in financial difficulties, have been compelled to ask for an extension of 6, 9 and 12 months. Their creditors have been notified to attend a meeting in Philadelphia to-day. Among the chief creditors are the Whiting Paper Company, J. G. Ditman & Co., the Mount Holly Paper Company and Crane Brothers, Westfield, Mass. The cause assigned for their trouble is want of capital and their effort to do too large a business in view of the sharp competition they have had to meet with on a small margin of profit.

Among the new things coming out to increase and give novelty to the fall business are the numerous comic card publications of the Chicago Picture Company. This house has just got out a comic set called "I'm the Bride." These are funny; there is nothing objectionable about them, and they will sell wherever displayed. This and the Guiteau series, which was got out at the time the murderer was hung, is only the beginning of the line of these comic-set cards. The company has now under way three or four series of them, which will be out next month. These are in high colors, with gold background, carefully executed and expressions well brought out. They will probably meet with an enormous sale all over the country. Among other sets to come on the market this fall will be a Christmas series, very funny and executed in high colors, same as the imported cards. With each order for sets a printed pasteboard display card is furnished. Each set comes put up in a printed envelope, and not tabled but are loose; each card is numbered. The "Bride" cards are now ready,

and may be had of the principal jobbing houses throughout the country or of the publisher.

The Floto Manufacturing Company reports business good in all of its novelties.

S. A. Hawkinson, of Blomgren Brothers & Co., electrotypers, Chicago, Ill., is dead.

Liebenroth, Von Auw & Co. are receiving very heavy orders for January shipments.

William P. Dane has ready a line of cards in fine tints, to take the place of white mill bristols for business cards and advertising purposes. These are desirable goods. He has also got out a new line of folders, for dance programmes and other purposes, which are very neat and attractive.

Patrick J. Courtenay, Catholic books and bookbinder and stationer, Philadelphia, Pa., is in the hands of the sheriff, who has made a levy upon his stock on judgment of $500 in favor of J. J. O'Brien, because, as he claims, other creditors began to push him. He is offering to compromise with unsecured creditors at 20 cents. Liabilities, $4,200; nominal assets, $4,300.

Manuel Knauth, of this city, has taken the exclusive agency for the sale of Reithoffer & Neffe's soap sheets. These sheets come in books of the size and form of cigarette papers or in blocks mounted on board. Each sheet contains soap enough for once washing the hands. Advertisements can be printed on the sheets. The soap sheet is really a good thing. Price lists can be had.

STATISTICS OF THE POSTAL UNION.

The following statistics for 1881 have been issued by the central authority of the Postal Union in Switzerland: During the year the union was reinforced by the acquisition of Chili, Colombia, the Little Antilles, Grenada, St. Lucia, Tobago, the Turk's Islands, Barbadoes, St. Vincent, Guatemala, Hayti and Paraguay, while, since the commencement of the present year, Hawaii and Nicaragua have also joined. In round numbers, the amount of business carried on during 1881 included the transmission of 3,866,000,000 letters, 649,000,000 postal cards, 3,000,000 cards with paid answers, 1,983,000,000 newspapers, 1,023,000,000 printed packets, 64,000,000 patterns, and 98,000,000 small parcels. The post-office orders granted were 95,000,000, representing a value of 8,045,000,000 francs. Daily throughout the globe the Postal Union expedites upward of 13,000,000 letters and postal cards, without counting printed matter, while the distribution of each year includes 3,448,000,000 letters in Europe, 1,246,000,000 to America, 76,000,000 in Asia, 36,000,000 in Australia, and 11,000,000 in Africa.

A NEW LINE TO JACKSONVILLE.

Some time ago notice was made in these columns of the new start taken last spring by the Louisville, New Albany and Chicago Railroad, and it was predicted that the management would make the road a power. This prediction has been verified, and its influence has been felt not only about Chicago, Cincinnati and Louisville, but in railroad circles everywhere. The latest departure is the establishment of a through Pullman car service from Chicago via Louisville, without change, to Jacksonville, Fla. The train leaves Chicago at 11:20 P. M. daily, three hours later than the regular leaving time of competing roads. This arrangement will be particularly appreciated by theatrical people, who can make the desirable jump from Chicago to Louisville, after an evening performance, without missing a date; something heretofore impossible. The run is made in eleven hours. The train is already very popular.

FOLEY'S PAT. IMPROVED STYLOGRAPHIC PEN.

Great reduction in price: No. 1, $1.75; No. 2, $2.50; No. 3, $2.50; No. 4, $3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, NOVEMBER 23, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

WITH a Post Office Department self-sustaining, we believe it to be a duty to urge a reduction in letter postage. No halfway measure will satisfy the public demand in this regard, and any substitute short of an unqualified change in the letter rate will not serve public convenience or requirement. It is alleged by some who are overanxious as to the postal revenue that a deficit may or will be likely to follow in case this reduction shall be made. While we do not desire to see any source of revenue fail to meet the emergency for which it has been devised, we believe that the increase in postal business will suffice very soon, if not immediately, to more than make up any loss that may be experienced. But it is no new thing that the Post Office Department should find itself in arrears of its receipts at the close of a fiscal year, and it is not so distressing that it should, unless its revenues are frittered away by mismanagement or by frauds such as have been developed in the Star Route cases. The reduction of postage is therefore in every way desirable, but it should be accomplished in that way and by that method which will be most acceptable and convenient to the mass of the public and least interfere with vested rights and the privileges of the people.

THE Post Office Department has already been used too freely as a system of machinery to create rewards for political service. While we recognize the fact that partisans are entitled to share in the fruits of their political effort upon such just conditions as to intelligence, capacity and morals as may insure a proper and efficient performance of public duty, we do not believe in so extending the perquisites of office as to inflict injury upon any class of our citizens, or to subject the people generally to inconvenience and annoyance. To compel people to buy a ready-stamped envelope as the condition of reduced letter postage—according to the proposition of Postmaster-General Howe—is to exercise a force in contravention of liberty. It is further impracticable to the extent that the government would be called on to supply all sizes, forms, qualities and shades of envelopes to meet a popular demand, which is not to be controlled or limited by any arbitrary size or grade of envelopes. Next stamped envelopes of a wide range of value as to postage would become necessary, and then, after all, we should be compelled in many instances to resort to the adhesive stamp. If reduced postage should only be granted on condition that a government envelope is to be used, very little benefit would accrue to the greater portion of the public, and the inconveniences to follow in the attempt to take advantage of the reduction in most cases would outweigh any possible benefit. It is not right that the government should practically take the control of any business. There is much capital employed and many people are engaged in the manufacture of envelopes. That this line of industry would be seriously prejudiced, and is to-day interfered with by the stamped envelopes supplied by the Post Office Department, goes without question; but when we consider the extravagance, not to say folly, of selling stamped envelopes at a price which really inflicts a loss and causes a positive reduction in the postal revenue without any compensating benefit, it is time that some other and better economic principle should prevail. The fact that the Post Office Department grants a large commission for the sale of stamped envelopes seems to us the "moving reason" for the suggestion of the Postmaster-General, and accounts for some of the interest in official circles in the proposed increase of the sales. Every postmaster whose post office is not a "small gold mine" would be glad to have the sale of stamps forbidden, and to require people to buy envelopes, for the sake of securing 60 per cent. commission on his sales. But then, after this was done, the want of stamps would be seriously felt, and the absurdity of making the restriction would at once be experienced. We have already pointed out that under the present internal revenue tax on bank checks, there is a system of printing the stamps directly on the blank forms furnished by the persons who propose to use the checks, and the government derives the fullest benefit from the tax. Why should not the government, therefore, establish agencies where any citizen who wants to use stamped envelopes, can send 1,000 or 5,000 envelopes and have the stamp printed on them? This plan is pursued by other governments, and it would not interfere with private enterprise. It would permit every envelope manufacturer to supply stamped envelopes, and the government would not only get full value for the stamp, but it would also save commissions and cost of delivery, which amount to we don't know how many thousands of dollars in the course of a year. In this way we could secure two-cent letter postage, and the postal revenue would be less likely to experience a deficit.

ENVELOPES.

ST. LOUIS, November 18, 1882.

To the Editor of the Stationer:

Why is it that some jobbers and some trade papers are still harping on the combination on envelopes breaking up as soon as the blanket orders are filled? Do they want it broken? Have they stopped to consider the consequences of a break?—a demoralized market, low prices, no profits, and that every dealer or consumer buying 10,000 would get them as cheap as a house buying 10,000,000! Not only in this line, but the same general policy seemingly holds good on all of the stock they handle, seeming to forget that there is a large difference in making 10 per cent. on a pound of paper they sell at six cents and one they sell at ten cents, figuring on the percentage of 10 per cent. made in both cases, without regard to result. The policy of every one interested in envelopes, as well as other goods, is to sustain prices, and not break them, even at a present inconvenience or loss. There is money n doing so in the end. It is true that there are

some things for the combination to remedy. The most important is, to arrange it so that regular dealers in the goods should be so protected that they, and not the manufacturer, shall handle the trade tributary to such dealer. This step will make the combination solid. Without it, its success is doubtful. Their interests are identical, and either to have success must have mutual interests with the other.

OCCASIONAL.

ANSWERS TO CORRESPONDENTS.

M. wants to know who deals largely in decalcomanie?

Ans.—Palm & Fechteler, 6 West Fourteenth street, New York.

W. asks: 1. Who makes or sells cream quadrille commercial note? 2. Where are headquarters for ostrich feather dusters?

Ans.—1. Campbell & Smith, New York, make and Myers Brothers sell. 2. You haven't kept a very good run of this column, as we answered the same question not long ago. H. J. Kopper, 103 Chambers street; J. H. Noe & Sons, 275 Greenwich street; A. Spektorsky & Son, 132 Duane street; M. J. Goodenough, 79 Chambers street, all in this city, are said to make them. Henry Levy & Son sell them.

DUTY ON TOYS.

The Treasury Department, addressing the Collector of Customs at Baltimore on October 21, rendered the following decision.

This Department is in receipt of your letter dated the 25th inst., submitting the appeal (2869 *h*) of John Wanamaker from your decision assessing duties at the rate of 50 per cent. ad valorem on certain toys, so called, imported by him per Leipzig, September 15, 1882, and claimed to be dutiable at the rate of 35 per cent. ad valorem only, under the provision of Schedule M for dolls. The samples submitted show that each article consists of a figure somewhat over a foot in length, with a body partly of wood and partly of wire, covered with dress, the hands holding cymbals, bells, &c., which in some cases are pressed together or rung by the touching of a spring concealed in the body. They are similar to the samples mentioned in Department decision of March 21, 1882, (Synopsis 5164), with the exception that some of the figures, instead of having ordinary dolls' heads, have heads of "Punch," Chinamen, &c. One of the samples has an ordinary doll's head. The appraiser refers, in support of his classification, to the Department's ruling of November 29, 1873 (Synopsis 1725), relating to certain jumping-jacks and caricatures made of worsted, which were held to be liable to duty at the rate of 50 per cent. ad valorem under the provision of the tariff for toys. The articles were different from those in the present case, which the Department is of opinion are substantially similar to the dolls mentioned in Decision 5164, and should be classified under the same provision of law as dolls, dutiable at the rate of 35 per cent. ad valorem. The entry will be liquidated accordingly, and measures be taken for a refund of the duties levied in excess. This decision does not affect that of September 15, 1882 (Synopsis 5397), relating to the assessment of duty at the rate of 50 per cent. ad valorem on certain dressed figures intended for exhibition in shop windows as advertisements.

ARTIFICIAL VEINED MARBLE.

A kind of manufactured marble, specially adapted for indoor use, has become quite popular in England, being produced there at a cost and of a style of beauty calculated to largely supersede the natural material, which latter they really exceed in beauty, particularly in the veins. In producing this marble, a large sheet of plate glass is first laid horizontally on a table, then a skein of tangled silk, knotted at the opposite ends and soaked in coloring matter, is pulled out into a rough rectangular form, the rectangle being crossed in all directions by the tangled threads, and laid upon the piece of glass, the knots beyond the edges of the glass. This first skein is colored to form say the blue veins, then another skein, soaked in other coloring matter, may be laid over it to form other veins; following this some suitable cement, lightly colored, is sprinkled over the skeins with the fingers to further add to the marbling effect, and after two or three sprinklings, it may be of different colors, the silk is quite covered by the wet layer of cement. The silk is now pulled out by being lifted vertically upward through the cement, more cement is added and the mass smoothed by a trowel. At this stage some fine cement is laid on, and over this a layer of canvas, to give strength to the film, now about a sixth of an inch thick, then comes a thick backing of coarse cement, making the whole five-eighths of an inch thick. It is left on the glass twelve hours to dry, enameled and polished.

THIRTEENTH CENTURY MANUSCRIPT BIBLE.

The following short description of a manuscript Bible, of the thirteenth century, may be of interest.

The book itself is by no means large, but measures 6½ by 5½ inches. The binding is of considerably later date than the manuscript.

It opens with the usual Epistle, and the initial letter of the Book of Genesis extends from the top of the page to the bottom, standing exactly in the centre. In this letter are small illuminations setting forth the six days of creation; all are very cleverly drawn, though the colors are somewhat pale.

The initial letter of each book is illuminated; and some of the pictures have a very quaint character, especially those of the Psalms, in which David is represented as playing on bells and striking them with a hammer, and those of the Proverbs, where the rod is made a prominent point in the drawing.

Perhaps the most beautiful pages are those of the Psalms, where the largest amount of rubrication gives a special brightness to the pages. These, indeed, may be said to sparkle when compared with the double columns of sober and closely written jet-black letters of the rest of the Bible.

But there is one other point deserving of special mention, namely, the beautiful vellum on which the book is written. This is so very thin, that at first sight one can hardly think that it is vellum at all; indeed, it seems much thinner than the ordinary parchment paper so extensively used.

The date assigned to this manuscript, by those skilled in such matters, is the earlier part of the thirteenth century; and there can be no doubt that the style of the illustration is of such a character as to confirm that opinion. The early history of the book is, unfortunately, unknown, as far as the writer is aware.

This is only a single book among the many treasures of a similar character which exist in private libraries; but, setting aside all other claims to attention, it is written on the thinnest vellum that has ever been used.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, November 22, 1882.

THE MONEY MARKET.—Money is stringent, the best rates for prime mercantile paper being 7@10 per cent., with still higher rates for second class. The railroad war and the free cutting of rates by the Northwestern roads, together with the depressed condition of the iron and coal industries and higher rates for money, has had a demoralizing effect upon the stock market, and prices have undergone a marked decline, the Granger stocks suffering most. Railroad mortgages and Government bonds have sympathized to some extent with the share list. Sterling exchange is depressed, and rates have further declined, francs sympathizing to some extent. Other Continental bills are unchanged and quiet.

THE PAPER MARKET.—While business generally among the city dealers cannot be said to have made any improvement since last week, there is withal a fair trade doing, and it will compare favorably with the aggregate during the month of November last year. With possibly one or two exceptions prices remain steady, and even firm, for some grades of print papers, with manufacturers generally fairly well employed on orders. There is quite a scarcity of tissue manillas, and it is believed that the market on this grade has been "cornered," several city dealers having bought up most of the stock in the city and made large contracts ahead; at any rate, manufacturers generally are unwilling to agree to make delivery on new contracts for several months to come. The manufacture of this grade is confined chiefly to less than a half-dozen mills. It is claimed that the production is 40 per cent. less now than at the corresponding time last year. The reason assigned for this is that the manufacturers have found it more profitable to devote their attention to making other grades.

THE STATIONERY MARKET.—Business has continued very active in nearly all branches of the stationery trade, nearby jobbers coming into the market daily. Dealers in Christmas and New Year cards, albums, gold pens and pencils, and other lines of holiday goods, are said to be very much driven to complete their orders, and some in these lines find themselves somewhat short of stock, and must in consequence lose business which they might otherwise have had. Some houses in the fancy goods lines are pretty well sold out, and will close out the remainder of their stocks at retail. The toy trade is doing a very large business, and bids to outdo any former season in late years, both in the variety of the goods offered and the amount of sales. Staples hold to firm prices, and no changes are to be noted.

T. W. & C. B. SHERIDAN, 25 Centre St., New York.

BOOK-SEWING BY MACHINERY.

Gawin Brown, of Glasgow, has recently invented a very ingenious machine for sewing books with thread.

The novelty of the machine is thus described:

The sewing is effected by needles pointed at both ends, with the eye in the middle, such as are used for embroidery machines, and worked and ranged as many in number as there are to be double rows of stitching across the back of the book, and passed right through each sheet as it is placed or fed into the machine, open at the back fold in front of the row of needles, preferably on an angled rest with shifting or setting guide, and two or more spring or clip holders. Each needle has a thread of its own, with the end passed through the eye, "knicked" round or otherwise secured to the middle of the needle, while the other end is secured at starting the sewing of a book, to the lower part of the vertical reciprocating frame on which the straps or cords are stretched for carrying and sewing the sheets to, as they are successively stitched. The vertical frame is of an open rectangular construction, having the back cords or bands of the book (to which the sheets are successively stitched) secured to, and stretched between the lower transverse bar which carries the sheets after they are stitched, and an upper bar or rail to which they are all tightened, or it might be gripping or tightening clips; and the upper carrying part of the lower bar is preferably beveled downward at the front to allow the lower part of each sheet and the folded back edge to be brought forward by the angled edge of its carrying rest, close up to the cords or bands at the angle formed by them with each previous stitched sheet of the book, to be secured thereto in a tight manner; and this open frame is mounted in vertical slides in a transverse frame, and counterbalanced by weights or springs, to be moved freely, and held in proper position vertically to suit the needles and sewing, and be lowered as the work proceeds and the book gets thicker.

The other features of the invention are thus summed up:

First—The construction and use in book-sewing machines of an angled or V-shaped sheet-holder for shifting and setting each sheet up to the securing back bands or cords for being sewn.

Second—The general construction or combination of the parts of a book-sewing machine, in which each sheet is sewn or stitched to the back bands or cords, either with or without the ordinary edge "kittle stitch" and parts for forming this, all in the manner of hand-sewn books, with all the motions primarily taken from one first motion shaft of the machine, so as to produce all the motions in the sequential and intermittent manner required.

Third—The combination and mechanical motion in book-sewing machines of two traversing frames of needle grippers traversed longitudinally to and from and on opposite sides of each sheet to be sewn placed between them, and for passing one set of double-pointed needles, with their eyes and thread secured in the middle of them, simultaneously through the sheets from side to side to form the stitches and grip the back bands or passed round cords.

Fourth—The carrying of the sheets being sewn and those previously stitched in book-sewing machines on a frame traversed laterally and intermittently to the length of and to form the stitches on opposite sides of the sheets and back bands or cords.

Fifth—The stitching or sewing together and to the tapes or bands of the sheets of books by means of a series or row of double-pointed needles held by grippers which are traversed longitudinally toward and from the back fold of the sheets, these sheets being carried on a transverse frame having an intermittent reciprocating motion to shift the sheets to the requisite position for the needles passing through to form the long and short stitches, the motions of the needle grippers and needles, and of the transverse frame being derived through levers from revolving cams, or from other suitable equivalent mechanical devices.

Sixth—The arrangement of two sets of hooks and hook frames carried and traversed on rails to draw out the loops or slack of the thread from the needles, the one set traversing outward while the other set is moving inward, and the outward traverse of either set being controlled and regulated by the inward traverse of the other to tighten the stitches and compensate for the shortening of the thread used in forming the previous stitches.

1882. PAPER HANGINGS. 1883.

By way of Customary Annual to the Trade, we beg to submit that the Samples now in our Agents' hands for Fall and Spring have been selected with most scrupulous care, and after an exhaustive examination of **All New Designs** cut by Standard Factories for the season's distribution.

We claim for the product a far **Higher Degree of Excellence** than heretofore compassed by any individual House, approximating, as closely as possible, a **Perfect Assortment.** Prices being equal, the comparative merit of those lines submitted to your notice will doubtless, to a great extent, control selection.

We challenge and respectfully solicit direct comparison of our collection with those of any other Houses representing that branch of artistic industry which is our **Exclusive Specialty.**

The untiring effort of over thirty years, which has resulted in our sales being the largest recorded for the past two seasons, has also given us an intimate knowledge of the wants of that widely extended trade to which we cater. This fact, coupled with unvarying promptness and watchful care of our customers' interests, will, we feel assured, secure for us a continuance of your esteemed patronage.

Our Agent will indicate, by direct correspondence, the date of his visit. Failing receipt of such advice, Samples shall be forwarded, free of expense, upon receipt of request.

Very truly yours,

DOUBLE PAGING MACHINE.

THIS Machine pages both sides, or Two Leaves, at the same time, in ONE OPERATION, by one operator, at the rate from **80,000 to 90,000 per day.** SIX TIMES as fast as any Machine known. No mistakes can be made, as the figures are in an endless chain. Printing Ink used. It Pages Consecutively and Folio. The Figures are printed on a perfect line, and there is no breaking of the paper. Any Figure can be replaced at a trifling cost. All small parts are made of Steel Castings. The Books are paged after they are bound. The outline of the figures are far more handsome than hand-cut ones. The DOUBLE PAGING MACHINES, as here illustrated, are well and thoroughly made, and will stand a great many years of the severest work.

THEY ARE USED BY ALL THE LEADING BLANK-BOOK HOUSES IN THE UNITED STATES OF AMERICA, and some of the larger houses in Europe. For Catalogues or other information, address

JOHN McADAMS SONS,
No. 528 Kent Avenue, Brooklyn, N. Y.

BOOK ILLUSTRATION, OLD AND NEW.

BY J. COMYNS CARR.*

(Continued.)

On the last occasion we discussed the conditions which should govern the relation of printed text and illustrated design. If the principles which I then sought to establish are admitted, it will follow that the earlier efforts of wood engraving exhibited qualities which most happily combine with the effect of type, and that the fuller, more complex, and more elaborate systems which have been introduced in modern times, whatever their merits from other points of view, have not the same fitness for the purpose of book illustration. But in the treatment of a subject like this, we cannot, unhappily, limit our view merely to what is best. The history of book illustration has historical as well as purely artistic interest, and it becomes, therefore, our task to night to discuss those later phrases of the art which have arisen since what is known as the revival of wood engraving.

The immediate cause of the previous decline of the art was due, as I have already explained, to the preponderating influence of steel engraving. There were influences of a deeper sort which has affected for the worse all the arts of design toward the close of the seventeenth century; but there cannot be a doubt that, in so far as the special history of wood engraving is concerned, the practice of illustrating books by means of steel plates tended very greatly to effect its ultimate overthrow. It was not merely, as I have said, that the engraver on metal ousted the wood engraver, but that the practice of the latter became in itself injuriously influenced by the ambition to secure a kind of result which is wholly beyond his resources.

Before quitting the older wood engraving, it may be worth while to remind ourselves again of its special excellences; and, with this view, we may take a work which offers a supreme example of the beauty and elegance that may be secured by the very simplest technical means.

I spoke of the "Ars Moriendi" as being not only the most admirable of the many block-books produced in the middle of the fifteenth century, but as offering, in itself, a sound example of style in regard to book illustration; and now I may, in like manner, point to a book produced in Italy in the last years of the same century, as expressing, in the highest form, the principles which the artist in the "Ars Moriendi" had enunciated. The designs of the "Dream of Poliphilo," published in Venice in the year 1499, will be accepted by those who share my views as to the requirements of book illustration, as a superb and unapproachable example of simple and dignified art. The original drawings have been sometimes ascribed to Giovanni Bellini, and whether by his hand or not, they certainly bear traces of the influence of that great master of design, Andrea Mantegna, with whom Bellini was associated. I remember, when I was in Mantua, inspecting a small manuscript volume, with drawings, said to be the work of Mantegna, which bore strong general resemblance of the work under consideration. But it would not be fair to insist too much on the original beauty of these designs, in reference to the subject we are discussing. If this beautiful volume is to be praised for the artistic invention which it displays, it is no less to be commended for the artistic method by which this invention is expressed. With scarcely greater elaboration than is employed in the "Ars Moriendi," but, with finer taste and greater skill, it presents to us a true

* Lecture delivered before the Society of Arts.

reflex of the artistic resources of the time, and allows us to judge of the perfect instinct with which the book illustrator then observed the conditions under which he labored.

But although it is the engraver rather than the designer with whom we are concerned, it must be observed that the two elements are so intimately connected, that it is impossible to keep them altogether separate and distinct. It is only a great art which can make simple means of expression suffice for its purposes. There is a vast mass of work now produced, work that powerfully impresses the spectator with a sense of the superior talent of the artist, which would not bear the test of translation into the simple and severe language of earlier design. The obtrusive realism of much of the modern woodcutting quite as often serves to conceal the failures as to assert the power of the author to whom it is due. I do not wish at all to underrate the cleverness of much of the engraving that adorns the illustrated books and the illustrated periodicals of our time, but I do say that, in too many instances, the essential shortcoming of the design are covered and hidden by an elaboration of detail that has no value or significance, and that presents no real difficulty to the workman. I do say, farther, that if one of the talented draughtsmen who execute the drawings for the *Graphic* newspaper—and I am here taking a favorable example of modern wood engraving—were suddenly compelled to confine his technical method within the limits that were deemed sufficient to the illustrator of the "Dream of Poliphilo," his work would cut but a sorry figure in comparison. Where the means of expression are so simple, there is no way of escape for imperfect knowledge or uninspired invention; where the lines are so few, every line must have a definite meaning; and though the earlier artist seems at first sight to have achieved his end with much less labor, yet it will be found on closer study that he has expended more thought and reflection, and that he has brought to his task a finer sense and a truer science. Nor can it be said, with justice, that these earlier cuts are produced without reference to the peculiar requirements of wood engraving. The advocates of a more modern system are sometimes found to declare that these earlier engravings are only mechanical reproductions of pen-and-ink drawings, and that they show no special aptitude in the management of the material. But this is not so. The broad, firm line with which Durer and Holbein worked upon the wood can be produced upon no other material. It is essentially different from the line that can be cut or bitten upon the copper; and if this line is beautiful in itself, which I think no one who is familiar with the originals will deny, it is obviously unfair to say that the result has no claim to be ranked as a distinct and appropriate product of wood engraving.

With these two examples of early wood engraving fresh in memory, we will now proceed to consider the various modes of the modern wood engraver, as they are employed in the adornment of printed books. It is a matter of pride to ourselves, that the revival of the art should have taken place in this country; for I think it will not be disputed that the modern impetus which the practice of wood engraving has undoubtedly received, is due in great measure to the efforts of Thomas Bewick. In a certain sense Bewick may be said to be the inventor of wood engraving as a separate art, for he was the first to adapt himself with readiness and complete submission to the peculiar technical conditions which the wood-block suggests.

It may be seen at first sight that this statement is in contradiction to what has already been said, as to the excellence of the earlier engravers; and it is, therefore, important that I should define clearly what is meant in thus ascribing to Bewick a position of such importance. The praise which has been bestowed upon the earlier engravings, is due to them in virtue of the completeness with which they fit themselves with printed books; but, of course, it would be unfair to allege that wood engraving must be altogether confined to the duty of illustration. It has a right, if it can prove its efficiency, to exist as a separate and independent art, and it is from this point of view that Bewick's influence is to be considered.

(To be Continued.)

Voss's Journal, in Berlin, says: "An experiment of great importance for the instruction of the blind has, after long efforts on the part of Dr. Ahrendts, the inventor of the shorthand system named after him, succeeded. About a year ago, Dr. Ahrendts ventured the first attempt, and began to teach a boy of thirteen, born blind, shorthand. At a meeting lately held, this pupil gave surprising proofs of the skill he has attained. Dr. Ahrendts dictated to him a political article from a daily paper, a description of Greece, &c., all pieces which would be difficult even for a skilled shorthand writer with the use of his eyes, and then made him read what he had written. The boy wrote shorthand as fast as a skilled writer writes longhand, and read it with perfect fluency, discerning the size of the written signs with his fingers. The writing was perfectly correct and pleasing to the eye.

WANTED.—ENGAGEMENT TO TAKE Charge of Stationery Department or Branch Store, or as Salesman for Stationery, Blank Books or Stationery Specialties. Fifteen years' experience and first-class references. Or to purchase a small Book and Stationery Store in lively place. Send full particulars. Address W. CLEVELAND HERRICK, P. O. Box 516, Geneva, N. Y.

BOOKKEEPER.—WANTED—A SITUATION by a thoroughly competent Bookkeeper; would be willing to make himself generally useful in store or office. Unexceptionable references. Salary moderate. Address H., office of American Stationer.

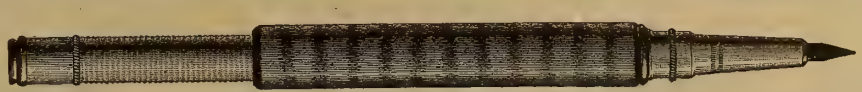
ANNOUNCEMENT TO THE TRADE.

The New A. T. Cross "Business" Pencil,

U. S. PATENT AUG. 29, 1882. PATENTED IN ENGLAND.



No. 100. Mounted Enamel Pencil.

We take pleasure in presenting to the Trade our lately perfected, neat, substantial and convenient Pocket Pencil, made in various styles, and for which we claim superior excellence over any pencil ever placed on the market. Its most prominent feature is known as a **"Propel, Re-pel and Ex-pelling Lead,"** three features never hitherto brought into one combination. It is also made strong and durable in all its parts, the cases of every style (save one) being of Day's best quality hard rubber, and the mountings are of superior gold stock plate (not the ordinary electro plate or fire gilt, which soon wears off) and will keep bright and do service for years. Prices are nearly 50 per cent. less than any goods of the same grade that have ever been offered, and we recommend the early attention of the Trade to this pencil.

The accompanying are cuts of the four leading styles, retailing from 35 cents to 75 cents each.

Illustrated Circular and Price-List on application.

No. 108. Extension Rubber Pencil. OPEN.

No. 109. Extension Rubber Pencil. CLOSED.

When People are Traveling Comfort and Safety are the
TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

Power Embossing PRESS.

THIS is a powerful and simple machine, and is complete in every respect. The power can be thrown off and a break stops the bed instantly, thereby saving any covers or expensive plates from being damaged. The press is worked by a cam and toggle: the impression is regulated by bevel-cut gears on top, and the bed platen can be run up or down by hand-wheel on left side. Our new method of using steel rods makes the press much stronger than iron cast frames. It has a movable bed; can be used for steam or gas heat; is supplied with oil cups. This Embosser is strong and large enough for all regular work in a bindery.

Space between upright rods, 17 ins. Size of head, 9½ × 13½ ins.

PRICE, $375.00.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**
Each sheet is water-marked with name and date.

LOCKWOOD PRESS, 74 Duane Street, New York.

The American Stationer

A Journal Devoted To the Interests of the Stationery & Fancy Goods Trades

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. XII.---NO. 22. NEW YORK, NOVEMBER 30, 1882. WHOLE NO. 388.

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

Boston, Mass., November 2, 1882.

Thanksgiving week, like a borderland which rests against some romantic country, brings its own offering, and next to it comes the holy-days of Christmas and Easter. The peculiar stir in the city to-day is suggestive of a general movement of thanksgiving for the bountiful blessings of the year, gratitude for the loving kindness of the year in the shape of large crops, and a good trade all around. And out of the midst of all this comes the spicy fragrance of the Thanksgiving turkey.

There has been an avalanche of holiday goods placed upon the market, and their appearance seems to have been sudden, and the headquarters of Santa Claus has fairly been set up; but so many places claim the exclusive favor of the patron saint of the holidays that it is difficult to bestow the title. The holiday shopper has fairly got started, and from this on, for four weeks at least, will the streets be thronged, and there will be the usual crush and tear in the stores and at the chief street corners.

Of books and stationery there seems to be no end. The book publishers have almost, if not quite outdone themselves this year. Novelty has worked into the book business as well as into stationery. The rich cards, of rare, artistic design, used in connection with some kinds of books, reflect great credit upon the trade. Almost every publishing house of note has holiday books, *par excellence*, in its own peculiar lines, and the artistic quality of these costs thousands of dollars before they get on to the market. The distinctive features are poems, belles-lettres and illustrated works of extraordinary excellence. Among others are those of Houghton, Mifflin & Co., Osgood & Co., Lee & Shepard, and Estes & Lauriet. The limited *edition de luxe* of Hawthorne's works, to consist of 250 copies, printed on *papier verge d'Hollande*, by Houghton, Mifflin & Co., will be greatly sought for. The display of juvenile books is unusually large and attractive. "Baby Land" fairly revels in silver and gold, and then there are old books in new shapes and new books in old shapes. The first publishers of New York and Boston vie with each other this year in the presentation of attractive holiday books.

There is novelty and richness in stationers' goods as well as in books, and the variety is very large. The individuality stamped upon many lines of goods is strongly marked this year, while the ornamental has become so thoroughly useful that it would seem that the acme in such goods has almost been reached.

The dealers report a very satisfactory trade, but expect a few dull days after Thanksgiving, and then will begin the rush; and our stationers are well prepared against all the attacks that may be made against them.

The shop windows are now stacked with Christmas cards, and among the newest ones are tablets of ivory upon which mottoes and quaint pictures are painted. A tiny scent bottle is a novelty. It is intended to slip in the inside of a glove and is made very smooth for that purpose. Then there is piled plush stamped with a pug's head, the dog's head clearly defined, peeping out of a soft, warm nest. The clever conceits in this line are numerous—in fact, too numerous to be mentioned.

New Year calling cards also have appeared in great variety. Most of them are the work of the best engravers, the designs being of special beauty and attractiveness. Some of them are really choice gems of art.

Jobbers report a very fair country trade, and money comparatively easy, collections being made without much trouble. The shutting down of some kinds of mills in some sections of the country does not appear to have caused any serious apprehensions in the New England industrial sections.

Lieut.-Governor Ames elect now owns a majority interest in the *Daily Advertiser*.

Several changes in the paper trade here are likely to occur at the beginning of the New Year.

The State Printer presented Governor Long with a copy of his Thanksgiving Proclamation, printed on satin, with elegant rollers.

New Yorkers in town report that the biggest holiday trade the country ever knew is impending—and they ought to know. L.

ST. LOUIS NOTES.

[CORRESPONDENCE OF THE STATIONER.]

St. Louis, Mo., November 20, 1882.

Still the same old St. Louis. All of the editions of THE STATIONER are filled with reports of what other cities are doing in the stationery line, but not a word from St. Louis.

Our merchants, however, are not idle. Never before in the history of St. Louis has trade been livelier or more solid. A turn among the leading houses finds them all full of orders. Clerks and salesmen are running here and there, trying to keep up with the stream of trade that is pouring in despite the car-loads of goods that are turned out. There seems to be no let up from early morning until late at night.

A talk with some of the merchants brought out the following opinions:

Snider & Holmes cannot complain; trade has been excellent, and their mills have been running full with orders, and they have all that they can handle. A visit to the Williamson-Stewart Paper Company and H. B. Graham & Co. revealed the same outlook.

Among the stationers the cry is for goods. Shorb & Boland report large orders from the South & West. R. T. A. Ennis says that trade never was better. The John J. Daly Stationery and Printing Company says that its trade keeps it running day and night, and everywhere you turn you find the same busy, bustling crowd. All seem delighted with the fall number of the STATIONER. All join in saying with Joe Jefferson, "May you all live long and prosper."

PRINCE HAL.

LOUISVILLE LOITERINGS.

[FROM OUR REGULAR CORRESPONDENT.]

Louisville, Ky., November 20, 1882.

Under the influence of a prolonged spell of unseasonably warm weather, the general trade situation was tending toward quietness and ease, but about a week ago the advent of a cold wave reanimated the demand for goods, and a satisfactory movement is again in progress. Stationers are doing a fair average business, and while a few houses have not quite realized expectations during the past month, the trade on the whole has nothing to complain of. The prospects for the remainder of the year are very encouraging. Collections in the country are still a little slow, not from lack of means but for the reason that producers continue to hold their reserves for a higher market, especially in grain.

The stationers are displaying Christmas and New Year cards in unlimited variety; fancy goods dealers generally are also competing in this line, and the outlook now is that the scarcity of cards that has prevailed here just at the close of previous seasons, will not be experienced this year.

A modest, yet notable pamphlet, was issued last week from the press of John P. Morton & Co. I refer to the Western Farmers' Almanac for 1883, the fifty-sixth year of its publication. The annual sale of this old familiar household visitor now approaches 150,000 copies.

There are very few thoroughfares anywhere that present more plate-glass fronts than the stores along Fourth street in Louisville. The insurance carried on these numerous huge plates is not a trifling item in the underwriters'

risks here. In this connection, it is evident from the elegant and tasteful displays in many of the show-windows, that the STATIONER'S articles on window-dressing are being widely studied, and the ideas derived therefrom practically applied.

The Industrial Exposition is closed, and the exhibits are all removed; still, it is not too late to recall one of the finest features of a department in which all of your readers are more or less interested. The following from a recent *Commercial:*

"The excellent display of the Louisville Lithographing Company, second floor of the building, excited the admiration of all who saw it. The work of this company is a credit to Louisville, and is not excelled by that of any house in the country. Their establishment, on the corner of Fifth and Main streets, is one of the most extensive in the West. This concern, under its present management, has been steadily growing for the past three years, and is now one of the best equipped establishments of its kind in the country, employing over seventy artists and skilled workmen in its different departments, who are producing crayon portraits, colored show-cards, theatrical and colored posters, wedding and society invitations and a general assortment of artistic and commercial lithographing. Its work being of such a superior character, it is drawing the patronage largely from Southern and Eastern States, especially from large tobacco and other manufacturers using colored labels, show-cards, &c., in Virginia, Ohio, Covington, Ky., St. Louis, Illinois, Cincinnati, Memphis, Nashville, New Orleans, and Galveston. It seems evident from the extent of its patronage that their business is only brought to its present success by the superiority of fine designers, engravers and workers in colors. In fact, there is no reason why Louisville should not be proud of this branch of its industry."

The publishers of the History of the Fall's Cities are still wrangling in the Courts with their dissatisfied and unwilling patrons, and the excitement of those interested has revealed some novel and amusing features of the subscription book business. One of the iron-clad contracts was sought to be annulled by a subscriber on the ground that it was not binding because lacking the elements of mutuality, but on this point the Court has just decided in favor of the publishers. The aggregate claims growing out of the matter in the various Courts is stated at about $8,000.

Hunter Wood, of the Kentucky *New Era*, at Hopkinsville, recently burned out, has secured another office, and is running as usual.

The first newspaper ever issued in Morgantown, Ky., has just made its appearance in the shape of the *Green River Courier*.

Thomas Royall, the Fourth street bookseller, is advertising his business for sale as it stands, owing to continued ill-health.

Frederick Diehl, stationer, has removed to the new building, 333 East Market street; his store is a model of neatness and thrift.

The half interest of M. W. Larue in the *Sunday News* has been bought by George Baber.

A telegram announces the death of Major John Desha Simpson, proprietor of the Madison (Ind.) *Daily Star*. Major Simpson was a native of Kentucky, and won his rank in the Federal army by hard fighting; he was very well known in newspaper circles in this section.

J. M. Daffron has succeeded to the management of Abe Bufford's *Turf, Rod and Gun*.

A new book by a Louisville writer will shortly appear—the life of George O. Barnes, the Evangelist, by W. T. Price. It is understood that the book is based largely on the private diaries of the evangelist, written during his mountain campaign in Kentucky, and will, no doubt, prove to be a lively biography.

The last trade visitors are M. Allen, of Springfield; Ferguson, of the Goodyear Rubber Company, New York; D. Saarbach, of J. H. Bufford's Sons, Chicago, and Graves, of J. D. Whitmore & Co., New York.

The weather is bright, crisp and seasonable at this writing, and calculated to promote a cheerful, brisk feeling in trade circles. BOURBON.

CINCINNATI CLIPPINGS.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., November 27, 1882.

Last week's ups and downs in stocks, money and commodities had no perceptible effect on the Cincinnati market. The Clearing-House exchanges in New York are about as much in one week as they are in Cincinnati in a whole year. New York is about six and a half Cincinnatis in population and fifty-two Cincinnatis in clearing-house exchanges—that is, in point of intensity. In the movement of money the business here, per hundred thousand population, is only about one-eighth as great as that per hundred thousand in New York. Compared with Philadelphia by the same method, giving the Quaker City the benefit of its best figures, the ratio of intensity will be about as four for Cincinnati to five for Philadelphia. Compared with other cities, the ratio would be—Cincinnati, 3, Boston, 4; Cincinnati, 5; Chicago, 6. After this, Cincinnati stands on top in all comparisons as to St. Louis, thus—Cincinnati, 7; St. Louis, 6. To sum up, taking Cincinnati as the unit, and comparing intensity of business as shown by weekly reports of clearing-house exchanges, New York shows, per 100,000 population, eight times the weekly velocity of the money movement of that of Cincinnati for the 100,000 of her population; Philadelphia shows one quarter greater velocity; Boston, one-third greater; Chicago, one-fifth greater; St. Louis, six-sevenths as great. The clearing-house exchanges here last week were twenty millions, which was 15 per cent. improvement upon the corresponding week last year. They have kept right along wsth a steady average increase, week by week, for nearly three years. There has been no backward movement in all that time, taking the tally quarter—year by quarter—year season by season, or year by year. The present tendency is "Excelsior." All the while the upward line of advance has not been deeply corrugated by fluctuations, sometimes far up, sometimes deep down, as happens occasionally in New York, and frequently in Chicago. If the Cincinnati exchanges were exhibited by the graphic method, the top line for the last three years would show an average direction upward of about—say 5°—and would be interrupted by only the gentlest waves of depression and elevation. There now, these are solid facts and figures, which are more than a match for the unanimous growl of a thousand dispirited "bears."

General business isn't bad here. New York and all the East did not affect it perceptibly last week. Indeed, local trade in general lines improved. The grain movement, which, along with live stock, was tardy and slow, assumed more vitality and activity. Money, which the week previous was tight, became easier. Collections which have never been bad grew better. Yet there are some complainers in the face of all this—some to whom the future is a great gloom, populated with ghosts—the present being clouds and darkness, the past the only portion of time from which any cheerful lights are perceptible to their vision. Let us pass them with pity, and take care to escape infection with their malady.

But there are lines of business which are now suffering a real drawback. No city or section in the Union pays so much internal revenue tax on distilled spirits and malt liquors as Cincinnati. On cigars and tobacco only one district in New York city pays more than Cincinnati The manufacture of plug and fine-cut tobacco and of cigars is now suffering from uncertainty on account of the agitation of the question of abolishing the internal revenue tax or of reducing it. Orders for tobacco and cigars are very small. These do not pay the tax till they leave the factory. Retail dealers do not care about accumulating stock out of whose value 16 cents a pound is liable to be suddenly knocked by act of Congress. Cigar dealers don't care to risk a sudden drop of $6 a thousand on their cigars. This distrust of stability in these lines of goods is the only trouble with them. It affects transactions of jobbers with manufacturers most. As to retail dealers, they order from hand to mouth and order often. The consumption continues an unvarying factor. The tendency of this Damocles sword is to take trade from the middleman, the jobber, and transfer it directly to the manufacturer, multiplying his transactions in small orders very greatly. This factor has been operatiug here ever since about the 10th of Novembar. The total product of tobacco in the Cincinnati region, including everything, leaf and labor, is not far from $50,000,000 annually, exclusive of the revenue tax. It is a big industry to blow up suddenly with metaphorical dynamite. Nobody anticipates such a catastrophe. Manufacturers have diverse and very positive individual opinions as to the various policies of continuing, modifying or abolishing the government tax on manufactured tobacco. They would surrender any pet theory, and unanimously indorse any disposition of the question which had in it the element of assured stability. The present situation robs their business of repose. Leaf tobacco has dropped greatly here on small demand during the last fortnight. The situation, however, is regarded hare by cool heads as irritating rather than alarming. If anything more serious is in the situation it will develop within a fortnight.

In the stationery line everything is moving along at a two-ten-and-a-quarter gait. Carpenter never did so big an October trade as that of this year. Louis Snider's Sons had the same experience. Charles Stewart & Co.'s October transactions astonished them, and that *not* "over the left." J. R. Mills & Co. are kept hopping to get off their orders. Van Antwerp, Bragg & Co. have had a brilliant fall trade—increase in the great school-book line and rapid growth in a rapidly growing business in goods of the blank-book tribe. The Fulton gravity scales are to be seen everywhere in the city, and they are sought eagerly from without. The manufacturer is constantly improving them in respect to form and general construction. The Peerless filing case and file cabinet are growing in favor for their convenience, cheapness and beauty. That new music file, by the Globe Files Company, is giving the company trouble—to satisfy the demand for them. John Holland is having a regular torrent of orders for staple and for fancy holiday goods, notably from the East, and growing from all quarters. His new iridium-pointed stylus for telegraph, and other offices

where manifold copies have to betaken, are an immense success. They are better than agate and greatly cheaper.

The Middletown paper mills will soon have the advantage of a switch connection with the Cincinnati, Columbus, Cleveland and Indianapolis railway by which freights can be taken directly to and from their factories.

George Stevens, of this city, has one of the most simply beautiful show-windows imaginable. It is a deep recessed window, the sides and the upper half of the back of which are covered closely with choice engravings. The ground of the window is made wholly of large photograph albums, which rise as they recede, till they reach nearly half the height of the window, where the pictures in the back of the recess begin. Color and life are given to this by three pots of plants—one a Calla in bloom, in the very front; another, a modest member of the lily family, in the right middle distance, while a gorgeously colored leaf-plant, occupies the left middle distance. This simple arrangement has a wonderful landscape effect.

In the printing line, Charles N. Morris, 11 and 13 East Eighth street, is adding wonderfully to his répertoire.

The prospect for holiday sales is improving amazingly.

SEASON 1882–1883. SEASON 1882–1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

THE previous success of our Cards, it is confidently expected, will be fully sustained, if not increased this season, an expectation which is already verified by the large advance orders received, justifying our increased efforts to bring out a line superior to all our previous productions. Our line will again comprise Double and Fringed Cards as well as Heavy Mounts. All the Fringed Cards will be provided with protectors, and envelopes will be furnished for all cards costing $1.80 and upward. The names of the artists who have contributed designs are a guarantee of the excellence of our Cards. We will name only the following:

MISS L. B. HUMPHREY,	MISS F. BRIDGES,	MISS DORA WHEELER,
MRS. O. E. WHITNEY,	MISS ROSINA EMMET,	MISS FLORENCE TABER,
MISS L. B. COMINS,	THOMAS MORAN,	FREDERICK DIELMAN,
ALFRED FREDERICKS,	ALEXANDER SANDIER,	HARRY BEARD,
WALTER SATTERLEE,	R. G. BIRCH,	F. SCHUYLER MATHEWS,
THEO. LIEBLER,	GEO. J. BARNES,	H. P. KENDALL.

The literary matter in connection with our designs has been carefully attended to, among others, by MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

PRANG'S PRIZE CHRISTMAS CARDS.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

LUNG TOP.

This is a very simple device, said to be useful for exercising the lungs and at the same time affording amusement. It consists of a small circular metallic box, with perforations on one side. In its circumference is a small hole, in which is inserted a piece of rubber tubing. An indentation on the side of the box, which is held uppermost, receives the point of a small top or teetotum. This top is simply a small metal plate, from which portions are struck out to form vanes. The plate rests on a wooden button, through which a pin passes to form the spinning point. Holding the box level and blowing through the tubing drives the air through the perforations in the uppermost side of the box, and this blast striking the vanes of the top, sets the latter to spinning. The Fort Industry Manufacturing Company has it.

NEW PATENTS.

No. 266,379. Paper-Bag Holder.—Frank A. Masters, Troy, N. Y.

A three-sided case with shelves has its base inclined rearwardly on its upper side, the shelves being parallel thereto and forming an acute angle with the back.

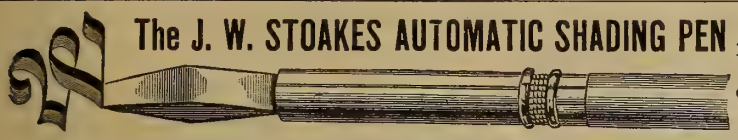
"ABROAD."

Owing to the great success of **"At Home"** last season, we have this year issued the **New Art Gift Book—"ABROAD"** —for the Holidays; to be of uniform size and a companion piece of **"At Home."**



"Abroad" far surpasses its companion both in **Decoration and Illustration.** Each page being a study in itself. The quaint little English Children are in this Book represented on a tour of pleasure through France. Those who have been "Abroad" cannot fail to recognize the beautifully executed drawings of places of interest. The appropriate verses accompanying each illustration make this work a handsome memento and Holiday Gift. Decorated by THOS. CRANE. Illustrated by ELLEN HOUGHTEN.

Price, $2.50. "AT HOME" published this year at **$2.00.**

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

J. D. Simpson, publisher, Madison, Ind., is dead.

G. D. Kincaid, stationer, Denver, Col., has sold out.

Henry G. Coyle, electroplater, Boston, Mass., has failed.

Jasper Howe, bookbinder, Walla Walla, W.T., has been burned out.

Charles A. Church, publisher of the *Record*, Belvidere, Ill., is closing out.

F. H. Johnson, stationer, &c., Gunnison, Col., has sold out to A. Blackley & Co.

Willy Wallach has just received a large shipment of Antoine's and La Syrienne inks.

G. W. Wentworth, paper box manufacturer, Haverhill, Mass., has been burned out; insured.

Richard Lee, proprietor of the Meriden *Recorder*, Meriden, Conn., has sold out to Richard Atwater.

John H. Walsh, Newburg, N. Y., is making superfine writings in a variety of weights and sizes. Send for sample.

It is nearing the time for the crush and rush of Christmas. Milton Bradley & Co.'s toys and seasonable novelties are sure to be in demand and the trade must not forget to be well supplied.

R. G. Eyrich and F. F. Hansell, of New Orleans, who have been in town during the week, called on the STATIONER yesterday. Mr. Hansell left for home on Tuesday night. Mr. Eyrich will remain over Sunday.

Marcus Ward & Co.'s new holiday picture books are works of art. "Abroad" the companion book to "At Home" has been designed by Thomas Crane and Ellen Houghton. It consists of an entirely original series of pictures in colors, representing a trip from London to Paris and through Normandy, made by English children; and all the interesting sights they saw, with descriptive verses by various writers. Every page has been specially designed for this work, which is as truly novel in the decoration and treatment of color, as in idea. It is entirely within the comprehension of children, while as a work of art it will be admired alike by amateurs and artists.

M. F. Tobin has in course of preparation a series of advertising cards which he intends to introduce in book form. It is to be known as the "Adventures of Little Tommy and Dick; or, Why Little Boys Should Stay at Home." It comes in six designs, which are designated "Contemplation," "Determination," "Consummation," "Exultation," "Consternation," and "Demoralization." Contemplation illustrates two little boys reading eagerly Indian tales in certain periodicals devoted solely to their publication. Determination shows them attempting to break open a safe. Consummation portrays them on their journey to the far West, armed with revolvers. In Exultation they illustrate their intention of scalping and shooting Indians. Consternation illustrates their capture by one of their intended victims, and Demoralization shows the unexpeted climax of their aspirations. Appropiate verses accompany each illustration.

The attention of parties desiring trade cards is called to the advertisement of the wide-awake firm of H. McAllaster & Co., Chicago, Ill., which has just placed on the market a new series of trade cards suitable for all businesses. This firm is also at work on a new series of twenty comic cards, which it is said are all good and to the point. The card business of this house has grown to such an extent that McAllaster & Co. are obliged to carry a stock of over 4,000,000 cards to supply the demands of the trade. Price lists and discounts will be sent to printers and stationers on application.

The C., C., C. and I., which is now operated in conjunction with the I. and St. L. R. R., forming the "Bee Line" from St. Louis to Indianopolis, Cincinnati and Cleveland, certainly cannot be called conservative. The management intends that its road shall have its share of business—and it has. "No. 11," which now leaves Cleveland at 7:15 A. M. and Indianapolis at 7 P. M., arriving at St. Louis at 7:05 A. M., has reclining chair cars free. This is a very fine and direct route to all points East and West.

Month by month *Our Little Ones* furnishes an unfailing supply of entertaining and instructive reading for children. The stories are calculated to arouse humane and dutiful feelings, while natural history and other knowledge is imparted in a simple form, not likely to be soon forgotten by the young.

H. McAllister & Co., Chicago, shipped last week a lot of cards to Oregon, on which the express charges amounted to $122.40. They have paid the United States Express Company alone over $1,000 this season. These figures will give an idea of the rushing business done by the house.

Manufacturers of stationery goods, publishers and others, are invited to send lists of their goods to J. H. de Bussy, at Amsterdam, Holland. The reasons for this request are set forth in an advertisement in another column. Mr. de Bussy is agent for the STATIONER.

T. C. Keyes, stationer, Newbury, Vt., advertises his goods through the medium of a small pocket memorandum book, with a bright chromo on the front cover.

R. R. Donelly, of the late firm of Donelly, Gassette & Lloyd, Chicago, has bought out his two partners, and is about to form a stock company, under the title of R. R. Donelly & Son.

A. Weidmann & Co. are closing out job lots, and odds and ends of holiday goods, at low figures, in order to make room for the mask trade.

E. J. Elkington, of England, has been engaged by Mermod, Jaccard & Co., St. Louis, as chief engraver for their fine stationery department.

Haskins & Vandercook, publishers of the *Leader*, St. Louis, Mich., have dissolved partnership. Edwin S. Haskins succeeds.

Frederick Boegle, bookseller and stationer, Virginia City, Nev., has been attached for $300, and has applied for relief in bankruptcy.

Thomas E. Bagg, printer and publisher of the *West Philadelphia Advertiser*, was advertised to sell out on November 28.

The demand making on the Floto Manufacturing Company, for all of its lines of novelties, is very large.

E. O. McLaren, bookseller and stationer, Plymouth, Ill., has sold out to Mrs. L. M. Cecil.

Lancefield Brothers, booksellers and stationers, Hamilton, Ont., have assigned in trust.

A. H. Leibert, bookseller and stationer, Easton, Pa., has been closed out by the sheriff.

Henry G. Coyle, electroplater, Boston, Mass., has failed.

James Sutherland & Co., stationers, Montreal, Canada, have assigned.

The Printers' Paper Mill, owned by Bitter & Symington, Lancaster, Pa., has been burned out.

The Compton Lithograph Company, St. Louis, has issued a price list of chromo calendars for 1883.

Fenn, Williams & Co., booksellers and stationers, Milwaukee, Wis., have assigned to H. Upson. Liabilities reported at $10,000; assets $5,000.

The First Assistant Postmaster-General has decided that communications reproduced by hectograph are not mailable as circulars when they convey information that appears from the internal evidence to be personal to the receiver.

Fire broke out Friday in a large brick building adjoining the City Hotel, Frederick, Md., occupied by the daily and weekly *Times*, and in a hat and shoestore. The entire building was destroyed, and the loss will amount to about $5,000.

T. H. Mullin, late of Mullin & Young, stationers, &c., Kalamazoo, Mich., has associated himself with Mr. Hilts, of Detroit, Mich., late Hilts & Raymond, under the style of Hilts & Mullin. These gentlemen will do business as dealers in pictures, albums, &c., at the old stand on Woodward avenue, and will add largely to their stock.

A meeting of the creditors of Cline, Miller & Co., paper dealers, Philadelphia, was held on Thursday of last week. A committee of five was appointed to investigate their accounts and assets and to report on December 7. The creditors appear to be favorably disposed toward the embarrassed firm, inasmuch as the failure is in any event an honest one. Liabilities are $30,000; nominal assets larger.

"Picturesque Journeys in America" is the title of a pretty quarto in the holiday list of R. Worthington. It is, however, as instructive as pretty, and will be preserved to instruct and entertain long after the holidays are over. The most beautiful and picturesque scenery in this country, from the shores of Maine to the wonderful mountains and valleys of California, are pictured in the fine engravings and it is all described in the text in a manner most likely to hold the attention of young readers.

Fowler & Wells have just issued two new works, viz.: "Traits of Representative Men," with portraits, by George W. Bungay, author of "Off-hand Etchings," and "Forty Years in Phrenology," embracing recollections of history, anecdote and experience, by Nelson Sizer. The first is a volume of sketches giving something of the history and character of nearly forty representative men, comprising poets, orators, philosophers, financiers, soldiers, statesmen and other leading men in their various walks of life. The latter is a detail of the experience of the writer as a phrenological lecturer and examiner.

T. J. Brown, Eager & Co., booksellers, stationers, dealers in wall paper, &c., have recently removed into their new and elegant store, 193 and 195 Summit street, Toledo, Ohio. It has three stories and a basement. The first floor is devoted to the retail trade, and has also a large gallery running around for display of books, the second story to jobbing and stationery, the third to wall papers, and the basement for heavy goods, storage, &c. A singular circumstance is the fact, that the new building stands on the same spot to which Mr. Brown moved his little frame structure in 1860. The new store has all modern improvements, conveniences, and

light, and for elegance is second to none in the country.

J. R. Martin, lithographer, Montreal, Quebec, is dead.

J. H. McGuire, printer, St. Joseph, Mo., has sold out.

James Sutherland & Co., stationers, Montreal, Quebec, have assigned in trust.

M. L. Delavan, publisher *Housatonic Ray*, New Milford, Conn., has sold out.

C. C. Thompson, printer, Canton, Ohio, is now known as the Canton Printing Company.

Lowenstein & Kanter, fancy goods dealers, Vicksburg, Miss., have made an assignment.

Watts & Godfrey, printers, Albany, Ore., have dissolved partnership, J. E. Godfrey retiring.

Wimpfheimer & Bassett, fringe manufacturers, New York city, have made an assignment.

Clark Brothers' pulp mill, Keenville, N. Y., has been burned. Loss, $10,000; partly insured.

Kauffman & Bouldin, publishers and printers, Frederick City, Md., have been damaged by fire.

Muller & Medlenka, publishers, Brenham, Tex., have dissolved partnership. H. Muller continues.

F. Phillips, publisher *Rural Notes*, Cannonsburg, Pa., has sold out to the *Rural Notes* Publishing Company.

Jacobs & Stine, booksellers and stationers, Walla Walla, W. T., have dissolved partnership, Mr. Jacob retiring.

Cornwells, Price & Co., dealers in wall paper and printers' supplies, Detroit, Mich., have made an assignment.

Hamilton, Woodruff & Co., printers and binders, Topeka, Kan., have sold out to the Topeka Lithograph Company.

W. L. Hoskins, Philadelphia, wants an able salesman for his blank-book, stationery and printing department. See advertisement.

Patrick J. Courtenay, dealer in Catholic books, &c., Philadelphia, Pa., has been sold out by the sheriff. M. J. Courtenay, his wife, continues.

Frederick Boegle, dealer in books and stationery, Virginia City, Nev., has filed a petition in insolvency. Liabilities $17,816; assets $14,000.

L. F. Thoma & Co., publishers of the *Volksblatt*, Wheeling, W. Va., have dissolved partnership, and have been succeeded by Louis Pepper.

William E. Kern, dealer in artists' materials, Philadelphia, is very busy with his trade in plaques, panels and mirrors. Painting materials for tapestry decoration are now the rage in Philadelphia.

McCarty & Hasberg are opening their last European shipment of holiday goods, which were ordered expressly for December sales. The goods consist of novelties which are solely controlled by this house.

Kendall Brothers, paper stock dealers, 140 Nassau street, this city, have made an assignment. Their liabilities are estimated at about $200,000, most of the trade here being interested. They make preferences in their assignment to the amount of $54,500 for borrowed money.

The Birnie Paper Company, Springfield, Mass., has removed its New York office to No. 60 Duane street, corner Elm. James G. Mundy, represents the company there, and is authorized to quote bottom prices. The lines of holiday papeteries are complete, and the styles are new and elegant. The company is also manufacturing a full line of envelopes and fine writing papers.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, NOVEMBER 30, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

QUITE a snow storm is in progress. It is some years since we had such a white Thanksgiving.

IT will be noted that favorable reports of trade combine and that forecasts of the spring trade are being made. It is believed by many that after the holidays there will be plenty to do in supplying requirements for the next campaign. Such prospects are very pleasing.

We have been told that the study of effects and of rendering a store attractive has received quite an impetus from recent remarks in THE STATIONER. This is well. Attention to artistic details in the arrangement of stock and the presentation of goods never fails to realize its reward. Novelty is the idea. Something fresh and original, combined with whatever is practical, is sure to attract public attention and secure popular favor.

WE have been favored with further proofs of the attempted swindling operations of the Cape Coast operator or operators. The following letters have been sent to us by A. & F. Spitzli, of Troy:

☞wemôrandum

From P. S. Baidoo & Co
cape coast
July 9th 1882

To
messrs
A. & A. F. Spitzli
Troy U S A N Y.

Dear .sirs—Being desirous of extending our operations in your towns, we take this time of introducing ourselves to you and offering our services for the purchase of all kinds of african produce importers, upon hearing from you we shall be pleased to send our orders to you, at foot we request to send us a sample packets of your stationery papers &c &c, that by showing us all the articles you got there, as to your way of dealing, & shall therefore be Enabled to make you some handsome & profitable remittances shortly, hoping our correspondence with you may result in the establishment between us of business relations, that will long continue to our mutual satisfaction & advantage we remain sirs

yours ever truly
P. S. BAIDOO & Co
Merchants
Cape Coast Tower Street
17th August 1882

Messrs A. & A. F. SPITZLI
Troy, New York U. S. A

Sirs—Desirous of establishing ourselves in this town as merchants and general merchants, We beg to acquaint and offering ourselves to do business, and shall be pleased to make you some *Gold dust* after the response of this to hand, We hope you will innmediately on the receipt of this, send us one case of samples which contains some sundry articles you have on hand, It will not be difficult for us to quote some of the prices, and send a small quantity ot *Gold dust* for the same, We hope the revival of trade will enable you to favor us with your orders, that from chance to chance by dealing with you, We shall begin a day or two & then proceed to send you some *Gold dust*, We look forward with confidence to receiving proofs on your approbation by a repetition of your commands,

And We remain Sirs
Yours Ever truly
SMYLLE. SONS. & SMYLLE

From Quacoe Annan
To A. & A, F, Spitzli U, S, A,

DEAR SIRS—Having seen your advertisement in one of the B. T. J. laren that you are the best manufactuerer of tools, Optical, Books & papers sotherefore Imyself beg to write you this on a very important, that on the receipt of this note, send me by the first steamer coming here one case parcel of all what you got there for sale Especially Books and papers as a samples and with their prices the same, which when I receipt them and select, I shall send you a remittance along with my indents at once, or if you shall take produce for which I got at presently about 4000 lbs ivory or elephant teeth and many other things, so please if you shall take them let me know when you send me the samples, so that I shall write to my agent in bush to buy me more to ship you at once I am now waiting for your samples and reply

I am
Yours truly
QUASI AKROBAP.
for Quacoe Annan merchant

Please excuse me this unpaid but is quiet date to be paid, try to send me book of names of merchants and Traders in your part Q. A.

The similarity of the handwriting in each of these letters and also in those which we have before referred to is very great. Some of the signatures employed are the same as those in letters addressed to English houses. All this certainly shows that there is quite an extended swindling plan which probably has its ramifications in other lines of trade than the stationers'. While it is doubtful if these attempts have succeeded to any degree, it is still possible that they have secured some victims, and readers of THE STATIONER should not only take warning themselves, but should extend their knowledge of the facts to their business acquaintances in all lines of trade likely to be set upon.

PREPARATION OF SILVER PAPER.—Six parts of ordinary caustic soda are dissolved in a sufficient quantity of water, and the solution is diluted until the hydrometer marks 20° of Baumé's scale. To this solution four parts of oxide of zinc are added, and the liquor is boiled until this oxide is dissolved. Sufficient water is now added to bring the solution down to 10° Baumé. Thin paper or calico soaked in this solution and dried will effectually preserve the most highly polished silver from the tarnishing action of sulphuretted hydrogen.

ARTISTIC CARDS.

One of the most noticeable characteristics of our time is the very extensive use of cards. We do not here allude to playing cards, but to those familiar bits of stiffened paper which are to be found in every one's possession, and so aptly fulfill the purposes of their design. For long these have, of course, become an established institution in polite society; visiting cards, especially, dating back as far as the commencement of the eighteenth century. Nevertheless, by the steady advancement of art, not only has the quality and taste of these trifles been improved to a remarkable degree, but their adoption has also been gradually extended down to the middle classes; until at the present moment every schoolboy might be tempted to have his name and address engraved at such cheap rates as are offered at every turning.

Again, life in this "steam age" encroaching so much upon the time of individuals, the art of letter-writing has practically been reduced to a minimum, so that in the place of an elegant epistle offering an invitation to a ball, a banquet, a garden party, or a genial "at home," the transmission of a simple card, with the name of the guest neatly filled in by the inviter, has become very general.

In olden times the usual mode of invitation was by proclamation through the medium of a herald. Three centuries ago this was somewhat simplified by sending round to the houses of those invited a servant, with a scroll, upon which the several names were inscribed. Thus, in "Romeo and Juliet" (Act 1, Scene 2), the rich Capulet tells Paris how he proposes that very night "to hold an old accustom'd feast;" whereupon he gives the list of the guests into the hands of his servant, saying:

> Go, sirrah, trudge about
> Through fair Verona; find those persons out
> Whose names are written there, and to them say,
> My house and welcome on their pleasure stay.

Descending to a period of a century and a half ago, we find printed invitations gradually coming into vogue; and such as are yet extant present an appearance and a wording so quaint that they may be regarded as literary curiosities. From an invitation card, issued by the stewards of St. Mary's Parish Church, Islington, dated 1738, the addressee was promised, among other convivialties, "then and there, Full Dishes, Good Wine and Good Humor, to improve and make lasting that Harmony and Friendship which have so long remained among us." These invitations were not sent, however, by what would then have been known as the post, but by a servant, to whom a fee was generally due. In many instances, he was also entitled to receive the price of admission to the feast—an ingenious method of canvassing for charitable funds. Thus, as a foot-note to the invitation card just referred to, we find the words, "Pray pay the Bearer Five Shillings."

The present century has witnessed a marked improvement on such heads; and although the simple form of MR. SO-AND-SO *requests the pleasure of* MR. SO-AND-SO'S *company on* SUCH AND SUCH *a date*, conveys all that is to be understood as a friendly invitation, the stationery which contains this inscription frequently bears traces of the most elaborate and costly workmanship. Indeed, never has art been brought to so high a pitch of perfection in matters of fanciful stationery as at the present moment. It would appear that all the pains individually bestowed upon the illuminated missals and MSS. of old can now be brought to bear with profitable results upon all the artistic trifles of our own time; that the antique block-printing has lost no tithe of its excellence, and that that which was then so unsparingly performed by hand can now be accomplished with equal perfection, and as applied to countless impressions by machinery, viz., by lithography and steam printing. Hence, valentines, Christmas and birthday cards betray real and undoubted art in their workmanship; the manufacture of playing cards has advanced with the times, and even our picture toy books have of late improved to such an incomparable degree that they might be said to possess equal merits with those of oil painting.

The æsthetic craze has reproduced many of the accomplishments of the fifteenth century, some of which may be extravagant, yet they can scarcely fail to teach us that art, like history, often repeats itself. In a little while, æstheticism will pass away; nevertheless, it will also leave behind it that higher and more generous taste for the beautiful in art, which, without the visit of this ephemeral craze, would not have come upon us so suddenly, perhaps not upon our generation at all.—*English Stationer.*

NOTES ABOUT TOWN.

Aikin, Lambert & Co. are doing an immense holiday trade.

J. Q. Preble & Co., New York, have issued a new net price list of envelopes, and a trade price list with sample book of their Belfast linen and other fine writing papers.

Obpacher Brothers report business as being excellent. The illuminated and embellished calendar which has previously been referred to in these columns is meeting with a great demand.

Willy Wallach's line of Valentine cards is meeting with much favor. In reference to these goods it is desirable that the trade should know that the stock has turned out far superior to the samples shown.

J. H. Bufford's Sons have this week added several novelties to their already large and varied lines. Their beautiful warerooms have been again much improved in appearance by the addition of fancy show-cases and other attractions.

Henry Levy & Son show some very fine novelties in satin goods, bamboo and plush. Among those in the latter material are articles which contain a whiskbroom, comb and mirror. The firm also shows a full line of De La Rue's pictures mounted on satin and plush, in which it is offering great bargains. A novelty, called the Langtry Sachet, is meeting with a great demand.

Magneso-calcite is the name given to a new fire-proof material recently introduced by Boston parties, and controlled in New York by the J. O. Smith Manufacturing Company, 51 John street. This concern is prepared to supply the trade with bond, note and jewel cases with patent linings made of this new material. The bond and note cases are of japanned iron, with approved locks. The jewel cases are of iron, covered in colored plushes, and satin and silk linings, and are very handsome. The magneso-calcite lining itself is composed of layers of material resembling straw board and asbestos pressed and hardened. Severe tests have been made of the fire-proof qualities of these chests and bond and note cases by fire insurance experts and others, who have given very flattering testimonials of the success attending the tests. Among these is one from Lieutenant-Governor Byron Weston, who says: "I witnessed the test made by your superintendent of the fire-proof qualities of an express chest and bond and note case manufactured by the Magneso-Calcite Fire-Proof Company, at Nantasket Beach. After being embedded in coals for one and one-half hours, the contents of the express chest, consisting of papers, greenbacks and lucifer matches, were found to be in perfect condition, there being nothing to indicate that they had been near a fire except a slight smell of smoke. Upon opening the small bond and note case, its contents were found to be in equally as good condition as those of the express chest, although it had been exposed to a severe test for more than half an hour. There can be no question but that the material used by your company is perfectly fire-proof."

A new blotting paper, that will not only dry the blot but bleach the remainder of it, can be made by passing ordinary blotting paper or card through a concentrated solution of oxalic acid. Care must be taken that no crystals appear, which would injure the porosity of the paper. It is claimed to do wonders, but it is very poisonous, and should not be used on general office desks.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, November 29, 1882.

THE MONEY MARKET.—Although the money market has continued stringent, it was in a little easier condition at the close, owing to the freedom with which the Extended 3½ per cent. bonds are being presented for redemption, as a result of Secretary Folger's latest order. Call loans on stocks were easily obtained at 4@8 per cent., 4 per cent. being the closing rate. Call loans on Government bonds were 3½@5 per cent. Time loans and commercial paper remain dull. The stock market continues in a depressed and demoralized condition, under the extreme stringency of money and the general lack of confidence regarding the immediate future. Government and railroad bonds have also declined, the market for all securities having been unfavorably affected by the scarcity and high rates for money. Foreign exchange is dull, and the posted rates have been reduced.

THE PAPER MARKET.—The condition of business among city dealers has varied little from that outlined a week ago, and can be termed fair at generally steady prices. The apprehension felt by many early in the season, when there was a plentiful water supply, that if the mills were allowed to run to their utmost capacity, without any hindrance, to the close of the year, prices would further decline, has been dissipated to some extent, as there has been and there is still much complaint of the drought in many sections. This has kept out of the market a considerable quantity of goods which would undoubtedly have had an effect on prices There is some concern now lest we should not have any rainfall before the winter freeze-up sets in. Should the pooling arrangement among the straw-board manufacturers not be carried out, it is more than likely that the members at the coming meeting will act as they did during the summer by shutting down their mills for a time, and thus work benefit to the trade and put the market in good shape. If this course is repeated, and it is likely that it will be, it will result in prices being advanced.

THE STATIONERY MARKET.—As is usually the case, the recurrence of Thanksgiving day has kept many out-of-town buyers at their homes this week and has been some drawback to business, but orders by mail continue fair, and the nearby and city trade has helped to make up a very good aggregate for the week. Dealers in fancy goods suited to the holiday trade, as a general thing, continue very busy, and large orders for Christmas and New Year cards are still being shipped. In the line of staple goods, the most that is doing now is on orders for reassortments of old stocks. Reports of trade at the West, as learned from salesmen who have just returned from the principal places in that section, are of an encouraging nature, and some of them go so far as to say that the outlook for next spring is even more so. There are no changes to note in prices, which generally rule firm.

By way of Customary Annual to the Trade, we beg to submit that the Samples now in our Agents' hands for Fall and Spring have been selected with most scrupulous care, and after an exhaustive examination of **All New Designs** cut by Standard Factories for the season's distribution.

We claim for the product a far **Higher Degree of Excellence** than heretofore compassed by any individual House, approximating, as closely as possible, a **Perfect Assortment.** Prices being equal, the comparative merit of those lines submitted to your notice will doubtless, to a great extent, control selection.

We challenge and respectfully solicit direct comparison of our collection with those of any other Houses representing that branch of artistic industry which is our **Exclusive Specialty.**

The untiring effort of over thirty years, which has resulted in our sales being the largest recorded for the past two seasons, has also given us an intimate knowledge of the wants of that widely extended trade to which we cater. This fact, coupled with unvarying promptness and watchful care of our customers' interests, will, we feel assured, secure for us a continuance of your esteemed patronage.

Our Agent will indicate, by direct correspondence, the date of his visit. Failing receipt of such advice, Samples shall be forwarded, free of expense, upon receipt of request.

Very truly yours,

JOHN J. McGRATH,

TESTIMONY OF LIEUT.-GOV. BYRON WESTON.

I witnessed the test made by your Superintendent of the fire-proof qualities of an express chest and bond and note case manufactured by the Magneso-Calcite Fire-Proof Company, at Nantasket Beach, on Friday last. After being embedded in coals for one and one-half hours, the contents of the express chest, consisting of papers, greenbacks and lucifer matches, were found to be in perfect condition, there being nothing to indicate that they had been near a fire except a slight smell of smoke. Upon opening the small bond and note case, its contents were found to be in equally as good condition as those of the express chest, although it had been exposed to a severe test for more than half an hour. There can be no question but that the material used by your company is perfectly fire-proof.

BOOK ILLUSTRATION, OLD AND NEW.

BY J. COMYNS CARR.*

(Continued.)

To my thinking, not even the best and most skillful of Bewick's cuts can be compared for beauty to the broad, simple manner displayed in the "Ars Moriendi" or the dream of Polifilo; but when Bewick applied himself to the art, it had already passed far beyond the point at which it had arrived when these books were produced. A greater demand for completeness of pictorial effect had introduced a more elaborate system of workmanship—a system based, as I have already explained, not upon the peculiar conditions of the wood-cutter's craft, but upon the more or less slavish imitation of the processes proper to engraving on metal. It was Bewick's triumph to discover a means by which this greater elaboration can be more simply and more appropriately secured; and in order to understand the nature of this triumph we must remind ourselves again of the means by which a picture is produced upon an engraved block.

All earlier work, it must be repeated, was founded upon a direct imitation of an original drawing. Bewick's practice, on the other hand, consists in a direct use of the block itself; he was not in any sense a *fac-simile* engraver. In order to explain his position in regard to his art, I may quote the words of a writer who has offered an enthusiastic vindication of Bewick's powers.

"Through the three centuries and a half," says Mr. Holliday, in an interesting series of articles contributed to the *Magazine of Art*, "which elasped between the 'St. Christopher' and the time when Bewick began his artistic career, there is no sign that any artist who dealt with wood engraving recognized that the process consisted in cutting out lights, and that, by confining it to the imitation of blackline drawings, they weighted it hopelessly in its competition with other arts.

"If the view already expressed," continues Mr. Holliday, "be correct, wood engraving proper commenced only with Thomas Bewick, the work of this remarkable artist being in no sense a development of that of his predecessors, to which it is throughout opposed. Accepting as the obvious and unquestionably characteristic peculiarity of the wood-block, its unequaled power of giving clearly drawn whites on a dark ground, as contrasted with engraving on copper, which process, by engraving black lines on a white ground, we find first, that the earlier engravers ignored this capacity, but attempted such simple work only, that it was always easy to execute, though quite uninteresting when done. When they had such designs as these of Durer or Holbein to cut, the result was highly valuable; but, insomuch as the engraver's work was purely mechanical, and left the resources of his material wholly undeveloped, his craft cannot be called an art. Instead of cultivating an art proper, he was imitating another art, that of pen-and-ink drawing on a material in differently adapted to the purpose, his sole object being the production of many copies. It is quite clear that it never occurred to either artists or engravers that wood was capable of more than this. Secondly, we find, that Bewick discovered the true powers of the wood-block, and gives us, for the first time, engraving in which white is cut out of black, and where we find no attempt made to force the material into the unnatural imitation of scratching, cross-hatching, or any other mode for which it is unfitted; and, thirdly, we find that

* Lecture delivered before the Society of Arts.

a great number of modern artists, who draw for wood, and engravers who cut the drawings, pass over Bewick's work and, recurring to the old, false, and hopeless principle of imitating other and antagonistic arts, aim exclusively at qualities in which wood is infinitely surpassed by etching, and leave untouched those in which etching would be as completely outstripped by wood engraving."

According to Mr. Holliday's contention, Bewick's perception of the capabilities of the wood-block is based upon an essential principle in the rendering of nature. "A little reflection," he says, "or what is better, a little observation, will show us that nature, as a rule, exhibits objects light on a dark ground;" and he therefore proceeds to contend that that process will have the advantage in which lines are taken out with the greatest ease, in which the objects are drawn with light instead of being drawn with darkness. I am not disposed to contest Mr. Holliday's generous estimate of Bewick's genius. Assuming that wood engraving is to exist as an independent art, he is, I think, unquestionably right in asserting that Bewick was the first to perceive the true means by which the block might be uitlized for this purpose. In so far, then, as it may be regarded as a direct means of artistic expression, the conclusion we should seek to establish may be said to be uncontrovertible, for it is obvious that the distinction so often insisted upon between the processes of wood engraving, or the processes of etching or engraving on copper, suggests a very important difference in the manner of working.

It is this fact which leads Mr. Linton, the eminent living professor of the art, to declare that all true wood engraving is produced by the use of what he terms the white line. If, therefore, we suppose the case of an artist working directly from nature upon wood, we may readily acknowledge the method described by Mr. Linton and Mr. Holliday to be the most appropriate to the means at his disposal; but, as a matter of fact, wood engraving has very rarely been used as a means of independent expression; the causes which have determined the use of this particular process are of a practical rather than of a purely artistic character. The wood block offers the readiest and the most economical mode of multiplying copies of a design, and it is for this reason that it has been so constantly employed for the illustration of printed books. If the larger principle for which Mr. Holliday contends were true at all, it would hold good as well for the draughtsman as for the engraver, and we might, therefore, expect that drawings would, as a general rule, be executed with a white pencil upon black paper. It is obvious, I think, that to accept this logical inference wobld be to place the pretentions of the wood-engraver upon too high a pedestal. The practice originated by Bewick must be taken as indicating a convention necessary to the art, as he understood it, but having no basis in a deeper principle.

(To be Continued.)

PORTABLE COPYING PRESS.

A London firm has recently invented a new copying-press of a portable character. A bed plate of light and suitable material supports an inflated india-rubber cushion, upon which the letter-book is to rest. Projecting upward from the bed-plate are, at one side, metal pieces, pierced at intervals (to suit different thicknesses of letter-books), at the opposite side, if the bed-plate is a single metal piece, hinged outwardly, and pierced at similar intervals to the first-named pieces. All of these metal pieces may be hinged to fall and stow when not in use. The pressure is applied by means of a platen, at one side of which are projections hinging into the metal side-pieces first named. At the opposite side of the platen, and in a position to correspond with the single-hinged metal side-piece, is a tongue with a sloped edge and notch, upon which the flap of the hinged piece is forced. This gives the required pressure, and the pressure is equalized by means of the inflated elastic bag.

WANTED.

A First-class Salesman that can command a good trade in Blank Books, Stationery and Printing, with Merchants, Manufacturers and Corporations; to a good, live man a liberal arrangement will be made.

Address W. H. HOSKINS,
913 Arch St., Philadelphia.

Mrs. DORR'S LAST PRODUCTION.
"Santa Claus Souvenir."
NOT A BOOK BUT A NOVELTY FOR THE HOLIDAYS.
Something New, Rich, Neat and Novel. Each one in White Envelope; 25 in a Box.

THE reputation of the Author is sufficient to guarantee a very large sale, and Mrs. Dorr has received contributions for the Souvenir from well-known writers, among which are Paul H. Hayne, Constantine E. Brooks, E. C. Stedman, J. J. Piatt, R. H. Stoddard, Henry R. Dorr, Mrs. Mary E. Bradley and others. The above cut gives the shape (but not the size) of front cover. Size, 9¼ × 5¼ inches. Both front and back covers are Lithographed in **Nine Bright Colors and Embossed**, so that the cut gives but very faint ideas of the beauty of this salable novelty. The inside 12 pages, printed in two colors, on tinted paper are all cut out the shape of Santa Claus. Price of this Gem only 50 cents. White Looped Silk Fringed, with Protector, 90 cents. Sample copy mailed any DEALER on receipt of price. It is not a book, but a novelty that every Stationer, Bookseller, Fancy Goods and News Dealer can sell. We can deliver large quantities in New York City. It will sell in every State in the Union for the beauty of the work, reputation of author and popular price. Liberal Discount to Dealers. Address TUTTLE & CO., Publishers, Rutland, Vt. BAKER, PRATT & CO., New York Agents.

With every order for 100 we enclose Electrotype Cut like above free. ☞ IT HAS NO COMPETITOR.

THE LIVERMORE STYLOGRAPHIC PEN.

(Full Size.)
Patented January 4, 1881.

Endorsed unanimously by the Trade as giving perfect satisfaction to their customers. Many say "It is the only Stylographic Pen worth having at any price." More of these goods are sold and used than of all others combined. They always command a ready sale; try them.

(Closed.)

(Open.)

Our New Pen, "THE MONARCH," has the reverse case—closing up short for the vest pocket—holds a large quantity of ink and is made very strong and substantial.

LIVERMORE'S STYLOGRAPHIC LEAD PENCIL.

(Full Size.)
U. S. Patent, September 13, 1881, also patented in foreign countries.

This Pencil is the greatest novelty of the season; contains valuable features never before combined in any lead pencil. It sets the lead automatically, ready for use, and by a single motion the lead is retired within the case after using. It is the most substantial Pencil ever produced, is handsomely made with Hard Rubber Case, Nickel or Gold-Plated Trimmings, as desired. It sells at sight.

The demand for the above goods is constantly increasing, due entirely to their superiority over all others. They are made by the Stylographic Pen Co., of Providence, R. I., who own and run the Largest Factory in the World devoted entirely to this class of goods.

STYLOGRAPHIC INKS,

Especially adapted for Stylographic Pens,

Power Embossing PRESS.

THIS is a powerful and simple machine, and is complete in every respect. The power can be thrown off and a break stops the bed instantly, thereby saving any covers or expensive plates from being damaged. The press is worked by a cam and toggle; the impression is regulated by bevel-cut gears on top, and the bed platen can be run up or down by hand-wheel on left side. Our new method of using steel rods makes the press much stronger than iron cast frames. It has a movable bed; can be used for steam or gas heat; is supplied with oil cups. This Embosser is strong and large enough for all regular work in a bindery.

Space between upright rods, 17 ins. Size of head, 9½ × 13½ ins.

PRICE, $375.00.

☞ No Goods sold to Consumers. JOSEPH L. ST. JOHN, Agent.

FANCY CASES.

Every season shows some new improvement in taste, not only in regard to household furnishing, ornamentation, and decoration, but for the more personal uses of the library and boudoir. For instance, stationery becomes yearly more tasteful and luxurious; designs for albums and portfolios are more exquisite, and the various boxes and cases which find places for a thousand unimaginable dainty uses on a lady's writing-table or dressing-case are yearly becoming more artistic and finer. Among the latter class of goods, for this season, Wm. Wilkinson & Brother, of 6 Calhoun place, Chicago, who have heretofore confined themselves almost exclusively to the manufacture of trays for jewelers, show a superior line of odor cases, cuff, handkerchief and lace boxes, jewel cases, &c., that is finding a ready demand. The designs are in russia leather, with nickel mounting, and finished inside with the finest shirred satin, in various shades.

GROOVED CHECKER.

The cut illustrates the design of a checker which was brought out a few years ago, but has not been pushed in the market. The feature of this checker is the groove around its circumfer-

ence which enables the player to pick it up easily and to retain his hold upon it. The convenience of this is apparent. This form of checker has been patented by J. E. Crosby, of Westfield, N. J., who is now manufacturing it.

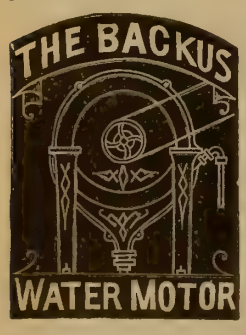
TOY BOOKS, &c.

The extent and variety of the goods made by McLoughlin Brothers is surprising. The beauty and perfection of each separate article is also notable. Whether it retails for a penny, a dime or a dollar, it seems as though human ingenuity had been exhausted in trying to produce the most beautiful article of its kind that could possibly be devised for the price. No class of goods has apparently undergone greater improvement during the past twelve months than the books and games of this house. A year ago it astonished the trade with a series of "Pantomime Books" that were marvels of cheapness and beauty, which fell upon a market glutted with notions of every kind. Some were more elegant, and some were cheaper, but none united cheapness and beauty in the same degree. The result was a craze for "Pantomime Books," and there seemed no end to the demand, nor of the editions that must have been run off to meet it.

This season the firm seems to have tried to outdo itself, for its stock exhibits some dozen or more new books, that surpass in elegance anything it has ever shown at the same price. It is questioned if there is any finer books for a child than the elegant "Mother Goose in a New Dress," illustrated by Walter Satterlee. Its size makes it noticeable among a multitude of others. But its merit lies in its bold and expressive pictures, which speak louder than the rhymes which they illustrate. The art of color printing is shown here very effectually. Few colors have been ued, but so skillfully that the results are exceedingly fine, and this book will, doubtless, gladden the hearts of children as

much as any of the treasures Christmas may have in store for them.

There is another very pretty edition of "Mother Goose," after Kate Greenaway, which is worthy of mention, and which is preferable to the original English edition. A large line of books, with showy illustrated covers, which present the appearance of a small picture gallery, proves that more attention is being paid to the casing of books than ever, although not at the expense of the quality inside. Most of these covers are entirely new and are strikingly beautiful and artistic.



In a quaint tittle, "Over the Hills," the illustrations are by Ida Waugh. It is a little gem, filled with miniature grandmothers and grandfathers, with youthful faces and graceful figures. The style of coloring in these books is a step in the right direction. It is almost feminine in its beauty—bright, without being gaudy, yet harmonious and appropriate.

A new "Juvenile Shakespeare" shown seems unpromising for a child's book, but the outside is pleasing, and the interior, though a reproduction of an English work, bears indubitably the taste of the artists of this firm. The letter-press is very happily graded to suit the minds of young readers, for whom it is designed, and it is, on the whole, a valuable addition to juvenile literature, and destined to awaken in the youthful mind a desire for the works of the poet.

It is useless to dwell upon a variety that appears endless, and impossible to portray the beauty that pervades all of the more recent productions of this firm. The pages of the "Cruise in a Walnut Shell," which might well have been named the "Fancy," as in it two youthful voyagers are supposed to visit every part of the earth, have been illustrated by the hand of a master artist. Pretty "Painting Books" modestly styled "Steps to Art," "Art Hours," &c., must prove perfect treasures to little folks, and exert on them a refining influence.

In building blocks there is a great variety. They are all of geometrical figures, interchangeable so as to produce any kind of a structure, and enabling a quick-witted child to build indefinitely, and be his own architect. There is no more beautiful present in the form of blocks than either the firm's new Cob House or A B C building blocks. The latter, which has just been introduced, appears to reach the climax in this line of goods, uniting in one, the alphabet and building block. The latter forms a kind of puzzle, which when worked out, presents a structure that resembles a Fifth avenue mansion.

In games, there is included everything from a checkerboard to a pack of cards, all bright, highly finished, and attractive. The valentines show the work of deft fingers which have wrought the most delicate and tender love tokens.

Supplies from **HYDRANT PRESSURE** the Cheapest power known. Invaluable for blowing **CHURCH ORGANS**, running **PRINTING PRESSES, SEWING MACHINES** in Households or Factories, **TURNING LATHES, COFFEE MILLS, SAUSAGE MACHINES, ELEVATORS, etc.** It is noiseless, neat, compact, steady; will work at any pressure of water above 15 lbs.; at 40 lbs. pressure has 4-horse power, and capacity up to 10-horse power. Prices from $15 to $300. Send for Descriptive Circular to **BACKUS WATER MOTOR CO.**

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

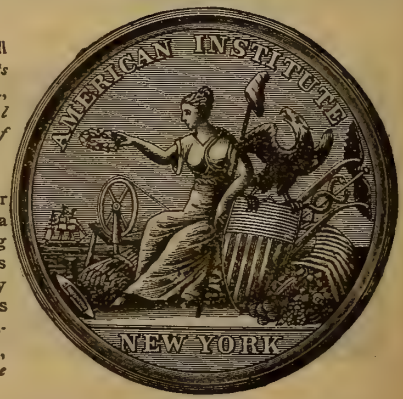
Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.



—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**

Each sheet is water-marked with name and date.

LOCKWOOD PRESS, 74 Duane Street, New York.

Correspondence.

CINCINNATI SCINTILLATIONS.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., December 4, 1882.

You have indeed started a reform in the country in the matter of fixing up show-windows. Visitors from this city to the East are peeping into the windows in the great seaboard cities and taking hints when they are to be had. Some of the windows here look as if fresh ideas were crystallizing in them. Now that the matter has been agitated—now that it is becoming a subject of thought and care—now that the STATIONER has been a help to introducing esthetics into the stationers' show-window, keep helping the window work along. It's a good work, but the window is not a good stopping-place. Contrasts are necessary in every work of art—a certain kind of contrasts are. But as the window is not a good stopping-place for this beautifying process, where, in the name of reason, is a good stopping-place? There are in Cincinnati manifestations of taste and order which are found in the window only and nowhere else. If there are such cases in Cincinnati, then it follows, as an inference justified by experience, that much more must such cases abound in other cities. This is what makes the situation deplorable. A beautiful show-window, not supported by corresponding beauty in the interior of the store, suggests at once the idea of a "whited sepulchre." The contrast in such an instance is not æsthetic. It is a principle in sound architecture that an element of construction should not only be strong, but should look strong, and conversely that it should not only look strong but should be strong. So the arrangement of goods in a "shop," as the English call it, or a "store," as we Americans term it, should not only be orderly, but should look orderly. Who disputes these propositions? Aren't they principles? How many put them wholly, or even as fully as practicable, in practice? Isn't the time for disregarding them passing into history rapidly? Is it not bad economy to disregard them, and a persistent disregard of them a constant invitation to step in and take your trade? Are not these queries worth pondering over seriously?

This calls to mind the multitude of helps to neatness and orderliness, conspicuous among which are such facilities as the Globe Files Company furnishes. Some storerooms are not as well adapted as others to fulfill perfectly the conditions of orderliness in fact and orderliness in appearance. They were built for other purposes, and not adapted in construction for the stationer's use. Yet even such places can be transfigured by a head with an eye in it for art. There are two stationery shops in this city which answer pretty fully the conditions of beautified attractive windows and an interior in keeping with them. But there is a grocery on Fourth street which, in point of perfection to which it has pushed this beautifying the store-room, leaves these two book and stationery shops in shadow by comparison. The grocery, in the first place, has counters and shelving adapted to its purpose, and in keeping with the general style of the room and the business. But it does not rely on these for decoration, which is hardly a proper term. Its materials are the goods it sells, some displayed exposed, others only in packages artistically arranged. The general effect is assisted by the display of a few pot-plants. This theme, which was started only as a suggestion, has gone further than the writer intended. Cannot the STATIONER work a reform in this important matter? It has just set the ball rolling in regard to fixing windows. A year or two ago it suggested clearing out old stocks entirely at frequent intervals, and that suggestion took seed in at least one spot of soil here, and is bringing forth good fruit.

Wrapping papers are off in this market. All other grades are in good demand at full prices. The volume of sales is good. November trade has been beyond expectation in all lines, and dealers as well as manufacturers of material and of finished goods are agreeably surprised at the November showing of their books. Everything looks cheerful. Collections are good. Money is not so light as it was a fortnight ago. Evidences of thrift and abundance in all of the country are multiplying. The flurry in stocks and grain in New York and Chicago, and the occasional failures in other parts of the country are having the effect to introduce cautiousness into business and to make it look for a solid basis. That is the appearance of matters just now here. In dry goods and mercantile lines there has been quite a drop in prints here in sympathy with the decline in cotton. A beautiful fact is that all the agitation of changes in the internal and impost revenue have scarcely caused a ripple here where, of all places, any dangerous tinkering with the internal revenue system ought to manifest itself. This is the greatest beer and whisky producing centre in the world, and if not the greatest already, the very next to the greatest producing point of plug and fine-cut tobacco. The manufacturers of plug and fine-cut never accumulate stocks. It is necessary to make only enough to supply the current demand, so as to have it fresh. The effect of agitation on this trade has been thus far to reduce the size of orders and to vastly increase their frequency. This makes an annoyance in shipping. There is no diminution of consumption. The blast furnaces and iron mills are in full operation and have no thought of shutting down on account of the reeling condition of the railroad iron business. All lines of manufacture are employing full forces on full time. Labor everywhere seems satisfied with its wages, and labor was never more markedly characterized by its disposition to self-assertion. The clearing-house exchanges last week were about four millions less than the week previous, but it was Thanksgiving week.

The prospect for holiday trade continues to brighten—has continued until it has grown brilliant. In the matter of books, sales of the best standard literature are increasing, while that for yellow bookstuff is falling off. Dealers say that there is no falling off in yellow cover reading, but that the newspaper dailies, weeklies, and the illustrated periodical press are supplying this demand, while intermediate between this grade of reading and standard classical English literature the magazines, in infinite gradation of style and subject, are filling the gap.

Among trade visitors during the past fortnight have been Oliver Braden, of L. L. Brown Paper Company; Mr. Beach, of John Gibson, New York; Mr. Dinsmore, of Carter's inks, and Mr. Heyman, of the Eagle Pencil Company, New York.

PRINCE WILLIAM.

A machine for printing box sides and ends, instead of stenciling, and doing the work ten times faster than can be done by hand, has been patented by Connell & Dengler, Rochester, N. Y. It has the advantage of printing, in a very rapid and clear manner, all cards or trade-marks much more perfectly than can be done by hand, thereby rendering it of great importance to the merchant or manufacturer. The type or form is cast in brass, and secured in such a manner that it can be easily and rapidly adjusted to print upon the board at the proper time. The inking rollers can be instantly raised from the type, to prevent inking when the machine is not fed with boards. It will print boards varying from ⅛ inch to 1½ inches in thickness, and at the rate of 1,500 to 2,000 impressions per hour. The boards or sides of boxes are introduced to the machine in quantities of ten to twenty pieces at a time, and the bottom piece of the pile is fed by a reciprocating bar to its proper place in order to receive the impression at the proper time, the boards above dropping down to be fed in like manner until all are printed.

BOOK ILLUSTRATION, OLD AND NEW.

BY J. COMYNS CARR.*

(Continued.)

It was a happy inspiration which led Bewick to perceive that a harmonious and consistent result might be produced, at an expenditure of less labor than earlier engravers had been forced to bestow. His art, as he practised it, is not an art of reproduction or imitation; it is essentially a means of expression, and in his blocks we get the first independent experiment to give to wood engraving, by means strictly appropriate to the material, the force and variety of tone that we find differently expressed in a painting or an engraving on copper.

Bewick's blocks are, within their limits, complete as pieces of pictorial illustration; they do not suggest the existence of any drawing in another material from which they have been copied, nor, on the other hand, do they convey the idea that the artist has been attempting to reproduce the effects of a work in color. Since his time wood engraving may be divided into three distinct categories. There is, first, a style developed from that which he originated, and which depends upon a wholly independent treatment of the wood-block. Secondly, there has been, as I pointed out in my last lecture, a developed style of *fac-simile* engraving, not different in principle from the earlier manner, but admitting greater variety of effect, and simulating with more adroitness the individual manner of an artist's sketch. Thirdly, we have a great mass of modern wood engraving which applies itself to the task of imitating the appearances and results of other arts, either in painting, drawing with the brush, or in sculpture.

Let us now consider these different styles in their order. Bewick's method, in the most familiar and celebrated examples of his work, consists not in the use of lines at all, but in the cutting away of irregular spaces. He works from the black surface of the block, with a desire to retain of it as much as possible; and he therefore expresses himself less by definition of line than by contrasted masses of light and shade. In fact, to quote again the words of Mr. Holliday, "the picture is drawn in white, upon a black ground, and his blocks are executed in such a way as to suggest that he had previously made a drawing in this manner."

This mode of work has its counterpart among the processes employed by the engraver on metal, in what is known as mezzo-tint engraving. Here, as you are aware, the whole surface of the plate is ploughed up, so that, when filled with ink, it produces a uniform impression of the deepest tone. Upon this dark background the engraver then proceeds to register his picture by scraping away the lights. In proportion as he restores the even surface of the plate, he secures the highest light, and by graduated strength of execution, he is able to represent, with the utmost subtlety, all the most delicate refinements of light and shade. The same subtlety and refinement are not possible to the wood engraver, but it is possible to work upon the same principle; and it was this principle which Bewick's genius enabled him to apprehend. In the representation of objects in nature, an artist may proceed either by mass or by line. He may first define the forms, and then afterward add, by successive lines, the sense of contour and solidity; and in work so produced it will always be easy to perceive that the bounding lines of the picture have been established first, and that the truths of tone, which give roundness and reality to the picture, have subsequently been added. Or he may, if he chooses, proceed at once to translate the appearances of nature by careful disposition of masses of light and shade, and then, according to this system, the outline will come unsought as the result of contrasted strength of different depths of tone. It was in the use of this particular method that Bewick's originality is most clearly displayed. He cannot be said to have absolutely discovered the idea of working in white on black, for some of the initial letters in the earlier printed books of Italy are executed upon the same plan; and in the print room of the British Museum there are one or two large wood engravings of the human figure which display a like perception of the facilities which the wood-block offers for such a mode of work. But Bewick, if he did not absolutely originate the style, nevertheless uses it with the happiest effect in his careful and elaborate engravings of animals and birds. Nothing could be more admirable than the skill with which he conveys the sense of delicate tone and texture of a bird's plumage; and it is remarkable that the realism which attaches to this part of his work is often strangely in contrast with the crudely executed details of background.

But there is another class of engravings by Bewick, in which a different method is pursued. In treating landscapes, he proceeds really upon a totally distinct principle to that which guides him in his more careful and elaborate rendering of animals. Here his endeavor is not merely to register form, or even to simulate effects of texture, but to indicate the impression of a tint, and this he does with superb skill, by the use of what Mr. Linton has called a white line. By varying the thickness of the lines that he cuts away, and therefore conversly of the line that he leaves, he succeeds in giving every variety and delicacy of tone.

This is the phase of Bewick's art which may be said to have been most fruitful, by way of example to more modern engravers. The originality of Bewick's achievement is the more remarkable, seeing that there is nothing in the circumstances of his education which could in any way have assisted his progress. Having at an early age exhibited a certain taste for drawing, he was apprenticed by his father to Mr. Ralph Beilby, an engraver, to whom he was bound for a term of seven years; but Beilby was an engraver on copper, and for some time the young Bewick was employed in the rougher sorts of copper-plate work, even including the execution of brass-plates for street doors, and of crests, and initials on watch seals and silver plate. At the expiration of his apprenticeship he seems to have formed a resolution to apply himself altogether to wood engraving; and it is noticeable that his earliest essays prove that he had not yet abandoned the traditions which belonged to his practice as an engraver on copper. But it was not long before he struck out a new path of his own, in which he showed that he had reflected for himself upon the resources of his art, and that he brought to its practice not merely manual skill and dexterity, but individual artistic power and an individual technical style.

I shall not dwell at length upon that particular manner employed by Bewick, which consisted, as I have said, less in the use of lines, than of masses of light and shade. It has not yet been fruitful in any remarkable development among later engravers, though it is clear that in the hands of a man of distinct gift, it might be made to yield new and interesting results. That it could ever take a foremost place, as a means of interpreting nature, is not to be said, for it would always be necessary to acknowledge and accept a distinct convention upon which it is founded.

A far more important influence on wood engraving may be traced to Bewick's use of line. Here, also, his practice shows a due regard for the limitations of wood engraving, and it has been found capable, in other hands, of producing work of singular excellence and refinement. In its essence, this style of engraving may be said to be the converse of that which was employed by the earliest artists; they labored with a view to producing effect by the use of well-defined black lines, in rendering the impressions of an original drawing. Here, on the other hand, the picture is traced by means of cutting away regular white lines of varying thickness, so managed, as to show that the artist has worked with the peculiarities of a wood-block constantly in view. It is among the modern engravers of France that this system has been adopted and pursued with the greatest measure of success. An artistic result always gains in effect of dignity and charm, when a certain degree of scientific system and precision are seen to be employed in its production. No device, however cunning, will give a picture that peculiar fascination which comes from the perception of a style firmly held and deliberately put in practice; and it would be hard to match, even among the most perfect *facsimile* engravings, the beauty of certain wood-blocks produced by some of the modern masters of the French school. As a favorable example of this method, I may take a reproduction of an early Florentine picture by Pannemaker. Here it may be observed that the engraver has been, in the first place careful of the qualities of the work that he has been called upon to translate. There is something in the simple and restrained style of the engraving which accords with the *naïve* manner of the painter. Assuming that it is fair to attempt in black and white to make a version of a work in color, it would be difficult to conceive of any better spirit in which to approach the task than Pannemaker has here displayed. In the next place it may be said that the engraving has a special charm, inasmuch as it appeals to us confessedly as a work executed on wood.

(To be Continued.)

* Lecture delivered before the Society of Arts.

The following is a description of an invention provisionally protected by Robert Soderstrom, of Upsala, Sweden, but which has not been patented, and is therefore open to general adoption. It is designated as a new apparatus for cutting the leaves of stitched books. This apparatus is constructed as follows: Two posts or standards are connected together by a guide and base-plate. On the guide is mounted a movable slide, to which is fixed a cutting instrument, consisting of a round, sharp-edged knife or plate. A cross-bar is adapted to slide up and down in the posts or standards, and to be pressed downward by the action of pressure-screws in the said posts or standards. In using the apparatus, the stitched book to be cut is placed on a board between the base-plate and the cross-bar, and is fastened down firmly by means of the pressure-screws. The slide, with its knife, is then moved to and fro on the guide by hand, until the edges of the book are removed, leaving each leaf free. On the guide is placed an adjustable stop, which may be fixed in any required position thereon, according to the length or breadth of the book to be cut, so that the stroke of the knife may correspond thereto. A spring is adapted to press the knife against the book. By this apparatus the leaves of books may be cut in much less time than by cutting each leaf separately.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President. **DALTON, MASS., U.S.A.** JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show.

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS **LINEN LEDGER PAPER** Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

Being **Triple Sized** (a process entirely our own) and **Loft Dried,** can be erased and written upon the fifth time distinctly. None genuine without the water-mark, thus—**Old Berkshire Mills Linen Ledger,** and date.

PRICE LISTS OF OUR VALENTINES ARE NOW READY.

1883 VALENTINES 1883

WE hereby beg leave to announce to the Trade the completion of our line of Valentines for 1883, in the preparation of which we have put forward our best energies to keep up to the increasing demand for artistic goods. As a proof of our endeavors in this direction we would mention the following artists as contributors to our line for this year:

MISS FIDELIA BRIDGES,	MISS L. B. COMINS,	WALTER SATTERLEE,
MISS L. B. HUMPHREY,	MISS ROSE MUELLER,	JEAN AUBERT,
MRS. O. E. WHITNEY,	F. S. CHURCH,	Of Paris, etc.

Same as last season, we furnish our Valentines plain, and also single and double, with silk fringe. All fringed cards are provided with protectors and envelopes to insure safe transmission through the mails.

Envelopes are furnished, **without extra charge,** for all cards costing $1.80 per set and over.

Attention is called to the **elegantly designed backs, a special feature of our cards,** adding greatly to the artistic value of the same.

Our assortment of plain cards ranges in price from 35 cents per set to $6 per set, and of fringed cards, from $1.60 to $12 per set.

Special attention is called to the **AUBERT VALENTINE** (so named after the eminent French artist Aubert, who designed the picture of the lovely girl contained therein.)

A large folding card with a wreath of flowers, printed on satin, and designed by Miss F. Bridges; facing this is the design by Aubert. The card is heavily fringed with silk, has a leatherette protector, and each card is encased in a neat box. Price, each, $5.

Of all Valentines costing $3 per Set and over, we are ready to break sets, if so desired.

REGULAR DISCOUNTS TO THE TRADE FROM ABOVE PRICES.

Besides the above attention is called to our **New Birthday Cards** and **Artistic Plaques** and other **Art Publications.**

OUR LINE OF EASTER CARDS WILL SHORTLY BE ANNOUNCED.

1882. PAPER HANGINGS. 1883.

By way of Customary Annual to the Trade, we beg to submit that the Samples now in our Agents' hands for Fall and Spring have been selected with most scrupulous care, and after an exhaustive examination of **All New Designs** cut by Standard Factories for the season's distribution.

We claim for the product a far **Higher Degree of Excellence** than heretofore compassed by any individual House, approximating, as closely as possible, a **Perfect Assortment.** Prices being equal, the comparative merit of those lines submitted to your notice will doubtless, to a great extent, control selection.

We challenge and respectfully solicit direct comparison of our collection with those of any other Houses representing that branch of artistic industry which is our **Exclusive Specialty.**

The untiring effort of over thirty years, which has resulted in our sales being the largest recorded for the past two seasons, has also given us an intimate knowledge of the wants of that widely extended trade to which we cater. This fact, coupled with unvarying promptness and watchful care of our customers' interests, will, we feel assured, secure for us a continuance of your esteemed patronage.

Our Agent will indicate, by direct correspondence, the date of his visit. Failing receipt of such advice, Samples shall be forwarded, free of expense, upon receipt of request.

Very truly yours,

JOHN J. McGRATH,

174 & 176 State St., Chicago.

BAILEY'S COPYING PRESS.

This improvement is intended to save time in copying letters, and to make the process easier and more convenient. The base of the press is of the usual form but deeper than generally, and a drawer in the extra space holds the dampened blotting-pads secure from drying by evaporation and ready for instant use. From each side of the base rises an upright, the two being connected by a strong cross-bar, in the centre of which is the compressing-screw, reaching from the under side of the cross-bar to the upper side of the movable platen, the screw having a hand wheel midway between the two surfaces. That

portion of the screw above the hand wheel that screws into the cross-bar is right-handed, and that portion below the wheel that screws into the movable platen is left-handed.

Above the cross-bar is a tank for holding water, in which turns one of two rollers, the lower one being rubber and the upper brass, nickel plated. A tube that may be turned down to permit the water to escape from the tank is attached, and the tank is covered. All of the upper portion of the press is nickel-plated to prevent rust. The entire device is very compact, elegant in appearance and exceptionally convenient. Its use obviates the necessity for the water pot and brush and repeated pressure to absorb the superabundant water from the blotting-pads.

The copying-pads which have been adopted for use with this press are a novelty in themselves. The fact has been demonstrated beyond question, that the common blotting-paper generally used in offices forms the best material for damp pads for letter copying. The ohly objection being that when wet they require to be handled with extreme care, or they are soon destroyed.

To obviate this difficulty a cloth bag of thin cambric, or other suitable material is used ; the blotting-paper is placed inside, loose, and the end or mouth of the bag is closed, thereby securing all the advantages of the blotting-paper, together with the durability of the cloth. The cloth retains all the loose fibres of the paper, insuring exceptional cleanliness, as well as great durability.

It is not necessary that the pads should be run through the rolls every time they are used (although there can be no objection to it, except the time spent in doing it), being kept in a metallic, air-tight drawer, they retain moisture sufficient for practical use for a long time.

The great objection to the use of copying-pads kept constantly damp in cases or boxes heretofore used for the purpose has been that they mold and become musty, and, as a rule, after a short attempt to use them, have been discarded as being more objectionable than the old slow method of using the brush and dry blotter. In this new copying press ample, sufficient and convenient means have been provided for withdrawing the old and supplying fresh water to the reservoir of the press. The press is manufactured by Leonard Bailey & Co., Hartford, Conn.

NEW PATENTS.

No. 266,754. Parallel Ruler.—Gustav Blunck, New York, N. Y.

No. 266,759. Printing Press.—John Brooks, Plainfield, N. J., assignor to himself and C. Potter, Jr., & Co., New York, N. Y.

The combination, with the impression-cylinder and reciprocating bed, of screws and nuts to raise and lower the impression-cylinder, and mechanism, intervening between the reciprocating bed and the nuts, to give motion to such nuts in opposite directions near the termination of the reciprocations of the bed.

No. 266,760. Printing Press.—John Brooks, Plainfield, N. J., assignor to himself and C. Potter, Jr., & Co., New York, N. Y.

No. 266,813. Toy Cap Exploder.—Charles P. Harman, Cincinnati, Ohio.

A toy detonator or cap-exploder consisting of two jaws pivoted one on the other intermediate their ends, in combination with a spring-band encircling the two jaws, one of the latter having an upwardly inclined end at one side of the pivotal connection.

No. 266,814. Picture-Frame.—Horace Harris, New York, N. Y.

A wire picture-frame, having holders and doublings.

No. 266,815. Easel.—Horace Harris, New York, N. Y.

No. 266,875. Cipher Code and Apparatus.—Robert T. Oney, Huntington, W. Va.

No. 266,932. Machine for Rubbing and Dressing Type.—William H. Welsh and Charles W. Woodward, Boston, Mass.

In a machine for rubbing and dressing type, the combination of a bed or table, one or more adjustable rubbing or abrading surfaces applied thereto, and means for positively carrying or forcing simultaneously an entire line or row of type over or under the rubbing surface or surfaces.

No. 267,000, Paste Distributor.—William M. Kennedy, Ixon, Ill.

No. 267,056. Paper File.—Henry H. Blake, Chico, Cal.

No, 267,123. Register Pin for Printing Presses.—George Wing, Faribault, Minn.

The part of the body of the pin which is inserted in the tympan draws down thereupon the part above the tympan and the point of the upright guide.

No. 267,134. Lead and Crayon Holder.—John S. Birch, New York, N. Y.

No. 267,171. Printing Machine.—Henry P. Feister, Philadelphia, Pa., assignor of two-thirds to Isaac Fine and Issac S. Sharp, both of same place.

No. 267,172. Printing Press.—Henry P. Feister, Philadelphia, Pa., assignor of two-thirds to Isaac Fine and Isaac S. Sharp. both of same place.

A suction apparatus for automatically transferring a sheet (after its first side has been printed) from the first impression cylinder to the second, in order to print the other side of the sheet.

No. 267,180. Fountain Pen.—Joseph Friedmann, Seymour, Conn.

No. 267,197. Machine for Making Bags.—Orville S. Harmon, Brooklyn, N. Y., assignor to P. Lorillard & Co., Jersey City, N. J.

No. 267,212. Doll's Head. — Charles C. Johnson, Springfield, Vt.

A doll's head constructed with an interior wooden shell or a solid wooden foundation, with its exterior surface covered by a plastic substance.

No. 267,229. Punch for and Method of Canceling Tickets —William L. Langley, Baltimore, Md., assignor of one-half to John Lippincott, same place.

In a ticket-punch, the combination, with the cutting-jaws, of a mutilating point to make a ragged-edged hole, and a cutter adapted to cut a smooth-edged hole and to punch out the part embracing the ragged-edged hole, whereby, while the ticket will preserve a perfect register of the punch, the piece punched out of the ticket will be so mutilated that its reinsertion is impracticable.

No. 267,271. Label Holder for Boxes.—Henry H. Snow, Rrooklyn, N. Y.

No. 267,277. Toy Tree.—William T. Strasser, New York, N. Y.

No. 267,283. Paper-Fastening Machine. — Morton Toulmin, Washington, D. C.

In a paper-fastening machine the combination of a bed-piece, provided with a clinching-anvil, with an oscillating arm flexibly connected thereto, having a traveling staple-carriage, and means for automatically operating the same, and mechanism for forcing the staples to and through the paper.

No. 267,284. Luminous Picture, Print, &c.—William Trotter, Oyster Bay, N. Y.

A sheet or tablet of paper or other material having upon it two different pictures of different colors, one produced with phosphorescent or luminous material, the other with non-luminons material, and one being of a color resembling that of the surrounding ground or surface of the tablet, and the other of a different color.

No. 267,301. Stamp Canceling and Registering Machine.—William C. Woodrow and James W. Henderson, Lynchburg, Ohio.

No. 267,305. Envelope Letter-Sheet.—Addison C. Fletcher, New York, N. Y.

No, 267,309. Lead or Crayon Holder.—Joseph Hoffman, New York, N. Y., assignor to Joseph Reckendorfer, same place.

No. 267,313. Printing Machine.—Edwyn Anthony New York, N. Y.

The combination of three form-bearing cylinders (the forms on two of them being duplicates of one another, and the circumference of the non-duplicate form-bearing cylinder being a multiple of the portion occupied by the forms) with carrier-cylinders and impression-cylinders, whereby without turning devices two webs are simultaneously printed on both sides, one side of each web being printed from type.

No. 267,314. Lead or Crayon Holder.—Lewis Abraham, Washington, D. C.

No. 267,324. Automatic Toy.—Lee S. Burridge, New York, N. Y.

As a means for producing drawings automatically, a plate, the edge of which is provided with indentations and curvatures.

No. 267,353. Machine for Notching and Trimming Electrotypes. — Charles M. Letz, Chicago, Ill., assignor of one-half to A. Zeese & Co., same place.

DESIGNS.

No. 13,395. Holder for Cigarette Papers.—Jacob L. Haas, New York, N. Y., assignor to Wemple & Co., same place. Term of patent, 3½ years.

Nos. 13,400 and 13,401. Toy Bank.—Charles F. Ritchel, Bridgeport, Conn., assignor to S. S. and G. D. Tallman, both of New York, N. Y. Term of patents, 3½ years.

J. Marsching & Co., dealers in artist's materials, New York, have removed from 21 to 27 Park place, corner of Church street.

M. J. Anderson, 117 Fulton street, has issued new price lists of New Year and other visiting cards. He has also a price-list of 1883 calendars, which deserve the attention of the trade.

Charles J. Cohen, Philadelphia, has imported a full line of Goodall's playing cards. The assortment embraces an excellent variety of elegant floral designs much in demand at the present time.

Palm & Fechteler have placed on the market a novelty in the decalcomanie line. It is styled an album, and is comprised of a number of pictures on a slip of paper which folds between the pictures and fits into a cover. Each fold carries a number of small pictures and is called a page. There are twelve pages to each album and there are thirty-six different styles of albums. The pictures have a gold backing which admits of their easy transfer to any article, either dark or otherwise. In Europe these goods have met with great favor, the sales being so large that the factories have not been able to meet the demand. The work of transferring these goods affords much amusement to children and amateurs.

Thomas De La Rue & Co., have placed on the market a new penholder, called the "Antistylograph." This penholder is very simple in construction, being merely composed of a tube or reservoir, fitted with a screwed carrier holding a movable barrel pen, covered with an india-rubber nozzle. The reservoir also contains an open air-tube, projecting at the other end into an india-rubber bag, which serves the double purpose of preventing the ink from finding its way into the air-tube, and of allowing for the expansion of the air in the reservoir from the heat of the hand or the pocket. It is essential to keep the air-tube quite free from all obstruction. The Anti-stylograph offers the advantage of not requiring any adjustment, it being merely necessary to remove the cap and place it on the head, when the pen is ready for use. The Anti-stylograph is fitted with non-corrodible pens.

The prize Christmas cards published by L. Prang & Co. for this season are generally of a graver tone than usual, but their conceptions are as fine as any that have preceded them. The brightest of them, and one that is very taking, is that of the child awaking on Christmas morning; but its idea is not new, and only the cheery way in which the subject is worked up relieves it from being condemned as a hackneyed subject. The first prize card has a strength of thought and a depth of sentiment, with originality of expression, which will commend it to all whose feelings go deeper and beyond a casual thought of the subject. It represents a homeless mother, with her children, woe-worn and helpless, standing, as if alone on the face of the earth, beside a leafless, storm-riven tree, where snow and wind are accessories of discomfort. To these unfortunates appears a vision of the Virgin Mother with the Christ in her arms, in the brightness of a radiant halo which dazzles and bewilders the poverty-stricken ones. The poor mother has her hand raised as if to shield her eyes from the dazzling apparition, and yet with all her misery she seems to realize that her eyes have "seen the glory of the coming of the Lord," and that joy and peace belong to her as to the rest of humanity.

Max Griebel, of L. Prang & Co., begs to advise his friends that he has just received complete samples of the new line of valentine cards for 1883, and invites an inspection of them. The line is far superior to that of last season, as is natural to expect of this house. The samples on exhibition at Mr. Griebel's office, 38 Bond street, this city, are among the most exquisite goods of the kind ever shown in the United States. A complete description of the line will appear in a future issue of the STATIONER. The firm is hard at work to complete its stock, and it expects to have goods ready for delivery soon after January 1.

J. Q. Preble & Co. have issued a revised price-list of "Belfast Linen" and other fine writing papers, and have added a line of white plated and parchment paper, flat and folded, with envelopes to match. Attention is called to a reduction in the prices of flat stock.

The Powers Paper Company, J. L. St. John, agent, 536 Pearl street, is closing out what are left of its holiday papeteries at cost. It is also making special bargains in flat and folded papers.

Charles T. Bainbridge's Sons have their line of "artistic" New Year cards ready. This firm has a large variety of visiting cards, wedding stationery, papeteries, orders of dance, &c.

The Xmas number of the *Publisher's Weekly* is out in all the glory of fine illustration and handsome press-work. As usual, it is a gift-book of itself.

Barnicott & Son, Taunton, England, forward their 1883 catalogue of books, which is well got up and fully indexed.

Barnum & Co., 169 William street, are offering a large and varied line of New Year visiting cards.

John Speer, publisher of the Kansas *Tribune*, Lawrence, Kan., has sold out to A. C. Peck.

The assignee of J. D. McGill, stationer, Denver, Col., has sold out to Cohen Brothers.

Blakeby & Havill, printers, &c., Clinton, Ont., have sold out to N. M. Buchner.

H. T. Johnson, of H. T. Johnson & Co., stationers, Boston, Mass., is dead.

The Musselmans Tag Works, printers, Louisville, Ky., has been attached.

W. Mersden, publisher, Ruby Hill, Nev., has sold out to W. J. Penrose.

Philip R. Ammidown, dealer in paper hangings, Boston, Mass, has failed.

John B. Morrison & Co., publishers, Boston, Mass., have dissolved partnership.

Harrison Dixon, dealer in fancy goods, Philadelphia, Pa., has been sold out at auction.

J. E. Linde has his line of New Year visiting cards ready, including the "par excellence" series.

A receiver of the effects of Isaac Isaacs, dealer in printing materials, New York, has been appointed.

Maurice J. Lobe & Co., Baltimore, make a specialty of fancy cards, and have a number of novelties in this line.

Penoyer & St. John, booksellers and stationers, Saginaw City, Mich., have dissolved partnership. E. St. John & Co. succeed.

Walker, Morton & Daignean, dealers in subscription books, Battle Creek, Mich., have dissolved partnership. Walter & Daignean succeed.

John Petrie, Jr., is the wholesale agent for the "lung top," a description of which appeared in the novelty column of last week's issue of the STATIONER.

William Allen has withdrawn from the firm of Cornwell Brothers & Co., stationers and printers, New York, and will continue in business on his own account at 446 Broome street.

J. H. Bufford's Sons have ready their line of Easter and valentine cards. They comprise fifty series, each of which contains from two to ten designs. No. 840 includes landscape and floral scenes; the designs of No. 650 are all floral; No. 303, in four designs, represents water lilies and other aquatic plants; No. 355 is in four designs, each illustrating a little girl in some pleasing and juvenile sport. In No. 340 little girls are seen playing among flowers; No. 707 is an embossed series, rich in design and showing rabbits, dogs and birds in various comic attitudes. No. 704 designs are also embossed and represent cages in which are tropical birds of beautiful plumage. No. 826 has eight designs, each of which shows an egg of a different species of bird, partially broken and with flowers protruding. The designs of No. 300 are floral. No. 825 comes in nine designs of eggs in baskets or in nests. No. 742 contains four designs, each representing a young girl looking eagerly and lovingly through a window surrounded with flowers, as if awaiting some one dearest. No. 301 illustrates rabbits and children at play. No. 262 is a valentine series of artistic character, the designs being embossed and showing children in gondolas loaded with flowers and surrounded by sea birds. No. 596 is also an embossed series of eggs in baskets surrounded with flowers. No. 327 shows slippers filled with flowers. No. 100 comes in six designs of vases with choice floral selections. The designs of No. 401 are hats, shoes and slippers filled with eggs. No. 722 represents little girls in various sports. No. 732 is one of the prettiest series in the market; it is embossed in four designs, each representing a boy riding a swan, which is on the wing. No. 731 represents children with floral wreaths. No. 792 has designs of birds carrying eggs on their backs or under their wings. Each of the No. 703 shows a broken egg from which a child is appearing. No. 1,522 has children playing with eggs. No. 820 is an embossed series. No. 899 is a figure series, in which antique costumes are shown. Nos. 823, 806 and 824 are some of

the handsomest egg series ever shown. No. 862 is in four floral cross designs. No. 3,630 illustrates baskets filled with flowers. The designs of No. 822 are unusually rich; they represent a cross of thorns surrounded with large leaves, all of which are embossed. No. 865 represents tropical birds. Nos. 3,626 and 304 are valentine cards, and show flowers of rich and delicate hues in vases. No. 863 is in four designs, each representing a dove with either a leaf or a letter in its mouth, and surrounded with lilies, sunflowers, pond lilies, &c. No. 748 illustrates children making love in mature fashion. The whole line is beautiful, the designs being chaste and the coloring effective.

L. Prang & Co. report unusually heavy orders for their Christmas and New Year cards. It is said that dealers' stocks of these particular goods are moving very well, which is proved by the unusually heavy duplicate orders at this season. As some of the series have been exhausted and others are running very low dealers who wish to have a well assorted stock on hand when the retail rush is at its height, would do well to examine their stock and make up their orders before more orders run out. The new wedding cards appear to have met with much approval, which was expected, owing to their chaste original and suitable designs as well as their careful make-up. The firm's New Year calling cards begin to move largely, and there will doubtless be a large sale of these handsome goods during the holidays.

The Sanborn & Chapman Company, bookseller and stationer, Freeport, Ill., has been dissolved. Charles G. Chapman succeeds.

Myers & Brickell, publishers of the *Evening Dispatch*, Columbus, Ohio, have dissolved partnership. W. D. Brickell continues.

Bronsley & Devine, publishers of the *Herald*, Billings, Montana, have dissolved partnership. Alexander C. Devine succeeds.

Frederick Boegle, bookseller and stationer, San Francisco Cal., and Virginia City, Nev., has filed a petition in insolvency.

H. A. Young & Co., publishers, booksellers and stationers, Boston, Mass., have admitted Joel C. Clark to partnership.

Butler & Kelley, 125 Fulton street, are doing some nice work in engraved and embossed wedding invitations, &c.

Thurston & Garland, printers, Mechanic's Falls, Me., have dissolved partnership. H. M. Garland continues.

McCarty & Hasberg are offering great bargains in special lines of goods suitable for holiday presents.

The elegant novelties which Henry Levy & Son offered this year brought many new patrons to the house.

Francis and Loutrel have ready their usual full line of diaries, pocket menus, pocket almanacs, &c.

J. H. Vanzandt, dealer in stationery, toys, &c., Bristol, Pa., has sold out to Frederick H. Jewett.

The Floto Manufacturing Company has met with an unexpected demand for all of its novelties.

Send for Selchow & Righter's catalogue of games and home amusements. It is very complete.

Frank H. Cousant, dealer in picture frames, Danville, Pa., has been closed by the sheriff.

Charles McConnell, paper stock dealer, Boston, Mass., had his stock damaged by fire.

T. H. McAllister, 49 Nassau street, has issued a new list of optical goods.

Stevens & Cornell, printers, Grand Rapids, Mich., have dissolved partnership.

Randall & Bodin, publishers, Morris, Minn., have been burned out; loss, $6,000; insurance, $2,200.

SKIAGRAPH.

Amateur artists will welcome a neat invention enabling them to produce correct drawings of flowers, fruit, and small objects generally, known as the skiagraph. It is a very simple affair, and anyone can construct it. A mirror is laid flat upon a table, and on a hinge at one end of it is fastened a sheet of plain glass, fastened by parallel links to a second sheet similar to it. When anything is to be drawn the hinge is turned until an angle of about 45 degrees is formed between the plain glass and the mirror. The object is then placed on the lower sheet of plain glass, the upper sheet raised about three or four inches and a sheet of drawing paper laid upon it. A light from a candle placed at the upper end of the mirror is thrown through the lower sheet of plain glass, reflecting the flowers or other objects on the paper, whence their outlines can be easily traced. Accuracy is thus assured, so far as shape and outline go, without difficulty. For designers of fancy cards, illustrations of books, &c., the skiagraph will come in very handy.

HARD SOLDER.—Take 2 parts copper and 1 part zinc, or equal parts copper and zinc.

FOLEY'S PAT. IMPROVED STYLOGRAPHIC PEN.

Great reduction in price: No. 1, $1.75; No. 2, $2.50; No. 3, $2.50; No. 4, $3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, DECEMBER 7, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THE holiday trade seems to be progressing finely. Next thing after Xmas and New Year is St. Valentine's Day, and then Easter. It is in order to be looking up goods therefor.

WHAT may we expect of Congress? Will there be a reduction of internal revenue taxation, or must we make a mess over the tariff? Little is to be expected as to reform in either direction.

THERE ought to be something done with the tariff. We are in favor of doing away with its protective features, inasmuch as we believe that our strength as a manufacturing people is largely sustained thereby; but that some changes are required all will concede. There are irregularities in the tariff due to various reasons. These need to be cured, and all inconsistencies can be reconciled; but the trouble is that there are people who, if they cannot have their way, are opposed even to the rectification of injustice, and so contest any remedy, however essential. Must it always be so?

THE Cincinnati correspondent of the STATIONER has found evidence of the usefulness of our suggestion as to the artistic arrangement of stock. This was to be expected. The stationery trade generally have artistic tastes and inspirations, and we are sure that in most instances forgetfulness has prevented that attention to details which are so necessary. Forgetfulness, however, begets neglect, and this is really the great fault. We know that everybody tries to set out stock and display it well, but the demands of business and the interruptions caused thereby frequently make a dealer throw things together hurriedly without an eye to effect, and an ugly composite is created where none was intended. The proper way to set out goods is to take time to think, to study detail and contrast. Business demands this as much as it does any other action, and if, when work for the day has not begun or is over, the tradesman is too lazy to start earlier or too tired to stay later, there is plainly a lack of enterprise essential to success. Were we in the trade, we should make the effort to effect some distinct change in the arrangement or grouping of goods both in the shop and in the window, and it would require very little exertion to effect a difference that would be remarkable to the everyday passer-by and invite his attention and trade.

THE President, in his annual message, recommends to Congress a reduction of the rate of letter postage to two cents. The Postmaster-General clings to his absurdity of proposing the sale of stamped envelopes at the same price for which adhesive stamps are sold. If the question could be left to the common-sense judgment of the people there would be no question as to which way that judgment would turn. It would infallibly sustain the proposition of the President, and relegate Mr. Howe and his shabby scheme to Hades. It can scarcely be believed, although the idea is thrown out, that a reduction of the letter-rate to two cents per half ounce would cause too great a shrinkage in the revenues. Nothing in the history of our postal changes justifies the assumption, still less the belief, that such would be the case. For our part, we do not think that we should have to wait three or four years to enable the Post Office to regain an equilibrium, that is, provided all leaks were stopped, and that no system of spoliation was permitted to feed upon the revenue. In fact, there is much reason for belief that, with a fairly conducted post-office, at the end of another year, all apprehension of the insufficiency of the postal revenue to meet the expenditure for mail service would prove unwarranted.

MORTGAGES, ETC.

A German chemist named Puscher, a native of Nuremberg, reported to the trades union of that place that he met with great success in using glycerine together with glue. While generally, after the drying of the glue, the thing to which it is applied is liable to break, tear, or spring off, if a quantity of glycerine, equal to a quarter of the quantity of glue, be mixed with it, that defect will entirely disappear. Puscher also made use of this glue for lining leather, for making globe-frames, and for smoothing parchment and chalk paper. He also used it for polishing, mixing wax with the glycerine, and using it as an underground for laying on aniline red color. The red was found to exceed all others in which glycerine is not used. The glycerine has also some properties in common with india-rubber, for it will blot out pencil-marks from paper, so as to leave no mark whatever. A paste made of starch, glycerine and gypsum will maintain its plasticity and adhesiveness longer than any other cement, and therefore recommends itself for cementing chemical instruments and apparatus used by pharmacists.

ANCIENT EGYPTIAN ART.

At the same time their art was imperfect in many respects. Their pictures often exhibit a childishness of delineation which contrasts strongly with the perfection of their workmanship. While carefully observant of the laws of geometry and anatomically exact, they are grotesquely defiant of perspective. When, moreover, the Egyptian artist wanted to portray a great personage, such as a god, king, or hero, he drew him twenty times as big as the ordinary men by whom he is surrounded; and his ships, with their crews and cargoes, are drawn with total disregard to the laws of statics. However heavy the load, however unequally distributed, the boat is always level and buoyant. But Egyptian artists understood the harmony of colors, and decorated their buildings with admirable skill, the balance of contrasts being perfectly kept. The best modern decorator might learn of the ancient Egyptians. Their portrait painters, too, are very true. The Egyptian who represented a face in terra-cotta or stone does not seem to have flattered his "sitter," if we may judge by his works in the Boulak Museum, but he hits off the countenance and character of the man in a way which speaks much for a love of honesty in those days. The modern visitor is entertained in perceiving how conscientiously the work was done, and feels sure that he looks upon likeness after likeness, which perhaps was less appreciated by the personage thus celebrated than by his friends; and yet they are not caricatures, but only unfeelingly just. When the thing was finished there was nothing more to be said, though the critics smiled while they approved.—*Pottery Gazette.*

COLORINGS.

A room with a cold northern aspect, used in the daytime, should be furnished with objects of light warm tones; while in a room with a southern aspect, light hues of sombre colors may be advantageously employed.

It is well to separate with white, two colors that do not harmonize.

Where the greatest brilliancy and splendor are required, we resort to the contrast produced by complementary colors. Any one familiar with the law of contrast will attain this aim with better success, even with inferior colors, than another, ignorant of the law, could attain with the most brilliant colors.

The *ground*, as well as the *intervals* or distance between colored bodies, has some influence on the effect.

In furniture patterns, the opposition of the ground to the prevailing colors of the pattern worked upon it is too often neglected. For example, if we put a garland of flowers upon a crimson ground, it is necessary that, for the most part, they be blue, yellow and white, for if we put red flowers upon it, they will appear orange, rather than purple; they must be surrounded with green leaves contiguous to the ground. When the ground is greenish, red and pink flowers must predominate over the others. If the ground is of the color of dead leaves, then blue, violet, white and pink flowers will be suited to it.

Each color has many hues developed by admixture with other colors.

In using the primary colors on molded surfaces we should place blue, which retires, on the concave surfaces; yellow, which advances, on the convex; and red, the intermediate color, on the under sides; separating the colors by white.

In the association of two tones of one color the effect will be to lighten the light shade and darken the other.

A white ground has a tendency to make colors upon it appear darker, while a black ground has a contrary effect.

We claim, and reason prompts us to believe, that a combination of all the colors of the spectrum produces *white*, but take the same colors in pigments and the result is *gray*.

The only pigment that even approaches purity is ultramarine, and that is marred by a dash of red.

Yellow, orange, red and light green are known as luminous colors, whereas blue, violet and deep green are called sombre.

Orange is the only color, formed by the composition of two other colors, that cannot become sombre.

Luminous colors are called *warm*, and sombre colors are known as *cold*.

Colors giving a luminous complementary injure black when opposed to it.

The commingling of the edges of neighboring colors should be avoided, as it destroys the true tone of each.

Ornamental work of one color upon a dissimilar ground should be separated from it by an edging of light, *a contre* when the ground is of gold, the colored figure should have a darker edging.

On a colored ground of any description, gold ornaments should be outlined with black, but on a black or white ground a colored or golden figure requires no outline.

White, gold or black will serve as an edging to any color.

In shades of the same color a light tint on a dark ground requires no outline, but if reversed, the dark ground requires an edging still darker against the light ground.

A decided contrast between colors is a mutual advantage.

A color may be improved by placing it next to white.

Black may be advantageously combined with almost any color.

Gray sets off a color better than either black or white.

White allows each color to preserve its integrity, and even heightens them by contrast, and can never be taken for a color itself.

Different materials, though colored identically the same, present appearance of different shades.

A lined or channeled surface gives depth to color.

Two pure colors adjoining so influence each other as to create a shade overshadowing the natural color itself.

The shape of an object affects the appearance of its color.

The quality of the light illuminating a color affects it.

The fact that incongruous colors are often harmoniously combined in nature is no guarantee that they may be similarly applied in art.—*Decorator and Furnisher.*

AUTOGRAPHIC PRINTING PROCESS.

The following method of reproducing writings and designs is remarkable for its simplicity:

The basis of operations is common window glass—a most unlikely but perfectly reliable material to withstand the rumble and roll of modern printing machines. A solid ink is used, composed of beeswax, resin and lampblack. The drawing medium is a common steel pen, with this important adjunct, that it is constantly subjected to the action of a very tiny jet of gas, or an electric spark, which keeps the pen hot. It is inserted in the stick of ink, and its heat at once dissolves a "dip." The artist now proceeds to sketch on the glass, the fluid ink running as freely as necessary, but the instant it leaves the pen it again becomes solid, and adheres to the glass without blurring or running. As a consequence, shading of any intensity may be executed without risk of forming one big blot. The plate is now ready for an "engraver," whose hand is more potent and swift than that of any of his predecessors. This is hydrofluoric acid, a chemical well-known as being the only "eater" of glass known in practical chemistry. A small portion of this is poured over the face of the glass, and in a very short space of time eats its way downward. The ink, however, defies the acid, and the glass below the sketch therefore remains intact. All that now remains to be done is to mount the slip of glass on a metal block of the same height as printer's type, where it is secured with a little shellac, and the engraving is ready for the printing press.

SILVER SOLDER.—Melt together 34 parts, by weight, silver coin, and 5 parts copper; after cooling a little, drop into the mixture 4 parts zinc, then heat again.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, December 6, 1882.

THE MONEY MARKET.—There is an abundance of loanable funds, largely the result of recent Treasury operations, and rates are consequently easy. Call loans ruled at 4@6 per cent. Time loans were 4 per cent. on Government bonds and 6 per cent. on stocks. The discount rates for prime indorsed mercantile paper are 5½@7 per cent., and for single names and second-class paper 7½@10 per cent. The stock market has been strong and weak by turns, though there is a better feeling in the street, under the influence of cheaper money, though the unsettled railway war in the West militates against an active business and stable prices. Government and railway bonds are quiet. The foreign exchange market is firmer, and rates are fractionally higher, there being a scarcity of bills and a better demand.

THE PAPER MARKET.—Thanksgiving Day and the period covered by our review being about the last of the month, have been causes which have circumscribed trade within narrow limits. While dealers have felt this interruption to business, manufacturers generally have no falling off in the number of orders for goods to be made up. Print papers maintain a very steady and firm position. A feature in the line of manillas is the firm price of No. 1, suitable for the manufacture of bags. This is owing to the scarcity and high prices of rope, and it is probable that the bag makers may have to pay more for their paper unless the market for rope eases off, and of that there are no indications at present. There is, as usual at this time of the year, a good demand for tissue manillas, which are waxed for confectioners' use. Although prices for this grade have recently advanced about 5 per cent., it is not believed that they will go any higher very soon.

THE STATIONERY MARKET.—As is usual at this time of the year there is a lull in sales of staple goods, but outside of this there is very little change to note. Business in fancy goods retains many of the elements of activity which have been marked for a number of weeks past, although wholesale dealers are begining to feel a falling off in the heavy orders which they have been lately receiving, particularly in fancy cards for the holidays, and other novelties in the card line. Toys are very active. The large wholesale houses will begin the first of next week to sell at retail the remainder of their stocks. Dealers in gold pens, pencils, and charms are extremely busy, having all the trade that they can attend to. In fact the general condition of the trade could scarcely have a more encouraging outlook. Prices generally rule firm.

SOURCES OF RUBBER SUPPLY.

The recent attempted rubber monopoly and consequent exorbitant prices now prevailing, greatly to the detriment of manufacturing enterprise, serves to direct attention to measures of relief. The supplies of rubber in Bolivia, in the region drained by the tributaries of the Amazon River, are practically exhaustless. The discovery that the Beni River, which penetrates this region, is navigable for a distance of at least 800 miles, opening a way to the sea, promises to be of great commercial importance. A full account of the exploration made by Mr. Edward R. Heath, the pioneer, will soon appear in the records of the American Geographical Society, as well as in England. Mr. Heath says: "On the north side of the Beni River the forest extends from the water's edge over 15° of latitude. I penetrated this dense forest at one place as far as twenty-one miles from the river, and the farther I went inland I found the rubber trees increase in size and number. Each square league contains from 300 to 5,000 trees. On the south side of the river the forest is only from three to ten miles wide, but it abounds in rubber trees."

Formerly the products of this region reached the Pacific Coast through Africa, but now the tide of commerce begins to seek the new route via the Mamore and Madeira rivers to San Antonio, to which point steamers at present ascend. A railway from San Antonio to the Beni River will be built, Mr. Heath says, within four years, but those who remember the unfortunate experience of Mr. Church and his associates in the attempt to construct the "Mamore and Madeira Railroad" (which was expressly designed to reach Bolivia through the Amazon), will not be so sanguine. There can be no question, however, respecting the vast quantities of rubber, cocoa, vanilla beans, Brazil nuts, Peruvian bark, and other products which tempt enterprise in this direction.

DISTEMPER COLORS FOR WALLS.

If distemper is to be applied to a wall or ceiling which is covered with plaster, some whiting is put into water, where it must be easily broken and diluted if allowed time to soak; it must be completely saturated, and when it has settled the clear water must be poured off. To correct the too great whiteness, and to prevent a yellow cast, grind separately in some water a little indigo or ivory black, and mix with it; then add to the mixture some strong size which has been previously warmed, well stirring the whole till properly mixed. The whole of the distemper must be strained while warm, in order to remove all impurities and thoroughly mix the color. When this is done, the distemper may be put into a cool place till it is formed into a weak trembling jelly, which is the only proper state in which to apply it to the walls. All size distemper colors which are applied to walls, and which are mixed with whiting, should at all times be worked cold, and of a weak trembling jelly, otherwise it will be impossible to make good work, and great care should be taken not to have too much body in the color, for it will certainly crack and fall off in scales, as it is not the strength of the size that causes the work to crack, but the body of color. There is a great advantage in having a sufficient quantity of size in the first coat of distemper, as it binds hard and stops the suction of the wall, in consequence of which the next coat, if properly prepared, will not move the first coat, but it will work perfectly free, and when dry the work will have a uniform and solid appearance. This method of whitewashing and coloring walls is far superior to lime, as it works much smoother, and when properly mixed and worked upon a new wall it will not crack and fall off in scales; it also covers better, and after being repeatedly applied for a number of years the walls need no scraping, as the color easily washes off with a whitewash brush, after they have been well soaked with water.

SOLID POCKET GLUE—Is made from 600 grams of glue and 250 grams of sugar. The glue is at first completely dissolved by boiling with water, the sugar is then introduced into the hot solution, and the mixture evaporated until it becomes solid on cooling. The hard mass dissolves very rapidly in lukewarm water, and then gives a paste, which is especially adapted for paper.

BLUE BRONZING FOR BRASS.—Mix 20 drams hyposulphite of soda with 1 pint of water.

Sensitive people wish to be loved; vain people wish only to be preferred.

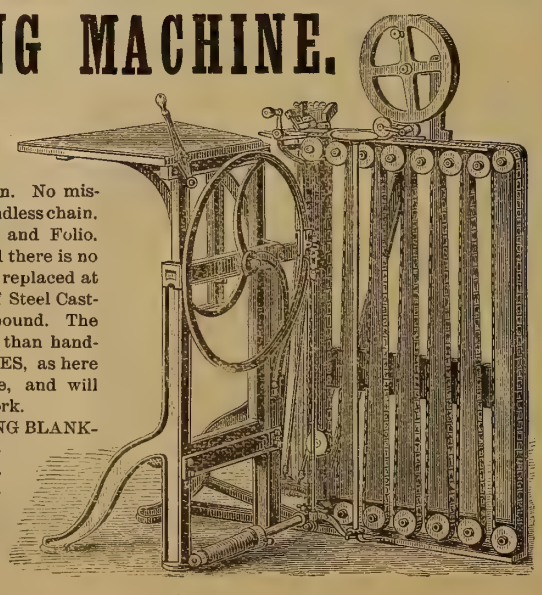
OVER 20,000 SOLD BEFORE OCT. 20th.

Mrs. DORR'S LAST PRODUCTION.
"Santa Claus Souvenir."
NOT A BOOK BUT A NOVELTY FOR THE HOLIDAYS.
Something New, Rich, Neat and Novel. Each one in White Envelope; 25 in a Box.



THE reputation of the Author is sufficient to guarantee a very large sale, and Mrs. Dorr has received contributions for the Souvenir from well-known writers, among which are Paul H. Hayne, Constantine E. Brooks, E. C. Stedman, J. J. Piatt, R. H. Stoddard, Henry R. Dorr, Mrs. Mary E. Bradley and others. The above cut gives the shape (but not the size) of front cover. Size, 9¼ × 5¼ inches. Both front and back covers are Lithographed in **Nine Bright Colors and Embossed,** so that the cut gives but very faint ideas of the beauty of this salable novelty. The inside 12 pages, printed in two colors, on tinted paper are all cut out the shape of Santa Claus. Price of this Gem only 50 cents. White Looped Silk Fringed, with Protector, 90 cents. Sample copy mailed any DEALER on receipt of price. It is not a book, but a novelty that every Stationer, Bookseller, Fancy Goods and News Dealer can sell. We can deliver large quantities in New York City. It will sell in every State in the Union for the beauty of the work, reputation of author and popular price. Liberal Discount to Dealers. Address **TUTTLE & CO., Publishers, Rutland, Vt.** BAKER, PRATT & CO., New York Agents.

DOUBLE PAGING MACHINE.

THIS Machine pages both sides, or Two Leaves, at the same time, in ONE OPERATION, by one operator, at the rate from **80,000 to 90,000 per day.** SIX TIMES as fast as any Machine known. No mistakes can be made, as the figures are in an endless chain. Printing Ink used. It Pages Consecutively and Folio. The Figures are printed ON a perfect line, and there is no breaking of the paper. Any Figure can be replaced at a trifling cost. All small parts are made of Steel Castings. The Books are paged after they are bound. The outline of the figures are far more handsome than hand-cut ones. The DOUBLE PAGING MACHINES, as here illustrated, are well and thoroughly made, and will stand a great many years of the severest work.

THEY ARE USED BY ALL THE LEADING BLANK-BOOK HOUSES IN THE UNITED STATES OF AMERICA, and some of the larger houses in Europe. For Catalogues or other information, address

THE BEST FLAT TOP DESK IN THE WORLD!

None of the various appliances we have presented for facilitating Desk labor have met with greater approval than the above. The lower sections are pivoted to the framework of the body of the Desk, which, with a touch of the hand, rotate at the will of the operator. Awkward draws and doors are thus done away with, and proper facilities afforded for the convenient classification of Books, Papers, &c Twenty-four Pigeon-Holes in left case filled with our Patent Filing Boxes. We apply the same principle to Cylinder and other styles of desks. For particulars and prices send 3-cent stamp to

NEW CALCULATING MACHINE.

A small appliance, no larger than an ordinary paper-weight, for performing simple arithmetical operations, has been devised by M. H. Beaucourt. The flat rectangular case contains (1) a wheel with a hundred teeth, marked with the figures 0 to 99, both inclusive, one of which appears at a time through an opening; (2) a pinion with wire teeth gearing with it, and carrying a perforated disk through which the fixed figures 1 to 9, both inclusive, are visible; and (3) a second pinion with ten teeth, bearing a dial with the figures 0, 100, 200, 300, &c. The apparatus is so arranged that, by turning the perforated disk, the consecutive units appear at the opening corresponding to the first-named pinion; and when 99 is reached by the dial of this pinion, one more ninth-part of a revolution of the perforated plate causes a zero to appear at this opening, and 100 at the other. An escapement spring may also be added, to bring back the dials to zero, or they may be so brought back by hand as preferred. The chief use of the invention is for addition, in which case, supposing zero to be shown at both openings, the perforated disk is moved successively round, from right to left, from figure 9 to the figure at the bottom of the column, then to the next, and so on successively, but always starting from 9 on the plate. The successive sums will be registered at one, or, if above 99, at both openings until the total is obtained. The unit figure of this total must be set down, and the tens, or tens and hundreds, as the case may be, carried forward by setting them at the units and tens opening before beginning the addition of the second column, which must be performed in the same way as the first. In subtraction, the manipulation is the same, but the direction of rotating the perforated plate must be reversed. It is said that multiplication and division may also be accomplished by the same appliance.

INLAYING.

When satin-wood was popular as a furniture wood, inlaying became a means of setting off its delicate color and strengthening its effect. Simple woods, in brightest colors attainable in nature, or dye, were used, and patterns of a primitive character followed. Tulip, zebra wood, rose-wood, or purple wood were favorites, and deservedly so, for with them the necessity of dye was not felt. Ebony and ivory were more or less used, ebony, we might say, extensively, and specimens of work bearing these inlays are often met with to-day.

The process of inlaying became so expensive, that imitations were freely made, with which persons of ordinary means might apparently possess the same luxuriant and costly articles as their neighbors, at little real expenditure. Staining and painting came more generally into favor and was made so perfect that it soon commanded a figure that compared very well with the prices of that which it had come to replace, and was adopted by the fashionable world as a more chaste and elegant means of ornamentation than the former. Naturally, this decoration gradually became distinctive, and when its hold upon the tastes of the people had become so certain as to give it a value based upon its own merits, all attempts at imitation of inlay were discarded, and in the beautifully colored panels of the French school we find an absolute individuality of treatment and characters defined, that would be impracticable for the limited possibilities of the more real work.

The fallacy of this preference, however, was of course short-lived, and the lasting qualities

of real wood overcame the transient beauty of pigments. Riesner, Roertgen, Heppelwhite and Sheraton brought marquetry again into prominence, and royal commissions enabled them to produce such specimens as would go far toward convincing the advocate of paint, if there were any in truth, that their choice was founded more upon delusion than fact.

COMMERCIAL TRAVELERS.

The system of selling merchandise by traveling salesmen in this country is mainly the outgrowth of the last twenty-five years and very few who are not immediately concerned have any adequate idea of the enormous proportions to which the business has attained. According to statistics presented before the Wholesale Druggists' Convention, lately held at Cleveland, the number of salesmen who sell goods by sample throughout the States and Territories is roundly stated to be not less than 200,000, maintained at an average cost to their employers, in the shape of salary, traveling expenses, hotel bills, &c., of $3,000 for each salesman, or an aggregate of $600,000,000 per annum. The system was undoubtedly modeled after the system of English "bagmen," who traveled throughout the United Kingdom and sold goods for the merchants of the chief commercial capitals long before traveling salesmen in this country were thought of. Though scarcely more than a quarter of a century old, the commercial traveler system has kept pace with the increasing facilities of travel furnished by our great railroad system. As the railroads have brought a market to every farmer's and producer's door, so have they brought to every country merchant's door the enterprising commercial traveler with his different wares. Commercial travelers have wonderfully promoted trade between remote sections, and in many ways have been of great benefit, both to their employers and to the merchants who purchase their wares. They have been instrumental in gaining wider markets for the distributing merchants and in economizing time and money for country merchants. Yet not a few business men have come to regard the traveling system as being too expensive, in comparison with the results attained, besides being fraught with evil, and would be glad to dispense with it if it were possible to do so. But to abandon the system would be on a par with abandoning railroads and going back to stage-coaches, or to rely upon the mails instead of the telegraph for the dissemination of valuable information. No, the commercial traveler system has become too important a factor in business to be dispensed with at this late day. The distributing merchant or manufacturer who should in these days sit down to wait for trade to come to him would have a decidedly slow and unremunerative time of it. The rank and file of traveling salesmen, it is generally conceded, is composed of bright, intelligent, honorable and upright men of good address and of large experience, but it also contains not a few who are unscrupulous, of unfixed habits and without business training. The problem is how to "separate the goats from the sheep." In the opinion of the chairman of the Druggists' Convention, the system can best be reformed by the merchants specially educating their clerks as to their own methods of business, and then require them to strictly adhere to that system, leaving the responsibility of success or failure to the employers. In addition to which the ranks of the traveling salesmen, it is said, need to be thinned out. They are becoming so numerous, so heavy a tax and burden upon the buiness of the country, that unless some limit is put upon the system, it must go down of its own weight. The merchants undoubtedly have it in their power to raise the standard of commercial integrity among commercial travelers, and to the credit of the Commercial Travelers' Associations, be it said, it is a work which they themselves are doing.—*Shipping List.*

To Repair Damaged Looking-Glass.—Pour upon a sheet of tin-foil about three drams of quicksilver to the square foot of foil. Rub smoothly with a piece of buckskin until the foil becomes brilliant, lay the glass upon a flat table, downward, place the foil upon the damaged portion of the glass, lay a sheet of paper over the foil, and place upon it a block of wood or a piece of marble with a perfectly flat surface; put upon it sufficient weight to press it down tight; let it remain in this position a few hours. The foil will adhere to the glass.

A Canadian manufacturer has invented a process by which compressed cotton may be used not merely for doors and window frames, but for the whole *facade* of large buildings. The enormous and increasing demand for paper for its normal uses, as printing and writing material, prevents the extended use of papier-maché as a building material, for which it is so well suited in so many ways ; bnt the production of cotton is practically unlimited, and there seems to be a large field available for its use in its new capacity as a substitute for bricks—or at least plaster—and wood. Treated with certain chemicals and compressed, it can be made fire-proof, and as hard as stone, absolutely air and damp-proof, and a material is thus produced admirably adapted for the lining—internal and external—of buildings, of which the shell may or may not be constructed of other material, while it easily lends itself to decorative purposes—*Builder.*

ANNOUNCEMENT TO THE TRADE.

The New A. T. Cross "Business" Pencil,

U. S. PATENT AUG. 29, 1882. PATENTED IN ENGLAND.

No. 100. Mounted Enamel Pencil.

We take pleasure in presenting to the Trade our lately perfected, neat, substantial and convenient Pocket Pencil, made in various styles, and for which we claim superior excellence over any pencil ever placed on the market. Its most prominent feature is known as a **"Propel, Re-pel and Ex-pelling Lead,"** three features never hitherto brought into one combination. It is also made strong and durable in all its parts, the cases of every style (save one) being of Day's best quality hard rubber, and the mountings are of superior gold stock plate (not the ordinary electro plate or fire gilt, which soon wears off) and will keep bright and do service for years. Prices are nearly 50 per cent. less than any goods of the same grade that have ever been offered, and we recommend the early attention of the Trade to this pencil.

The accompanying are cuts of the four leading styles, retailing from 35 cents to 75 cents each.

Illustrated Circular and Price-List on application.

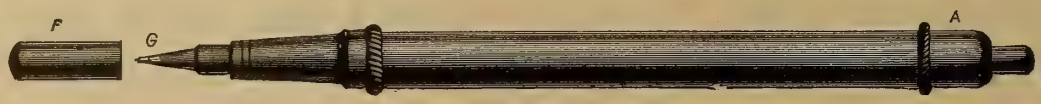
ENGLISH HAND-MADE PAPERS

ORIGINAL EYNSFORD MILLS,

WATER-MARK:

"FELLOWS"

KENT, ENGLAND.



These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers

Lor Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.

Proprietor: JOSEPH ARNOLD, Eynsford Mills, KENT, ENGLAND.

THE LIVERMORE STYLOGRAPHIC PEN.

(Full Size.)
Patented January 4, 1881.

Endorsed unanimously by the Trade as giving perfect satisfaction to their customers. Many say "It is the only Stylographic Pen worth having at any price." More of these goods are sold and used than of all others combined. They always command a ready sale; try them.

(Closed.)

(Open.)

Our New Pen, "THE MONARCH," has the reverse case—closing up short for the vest pocket—holds a large quantity of ink and is made very strong and substantial.

LIVERMORE'S STYLOGRAPHIC LEAD PENCIL.

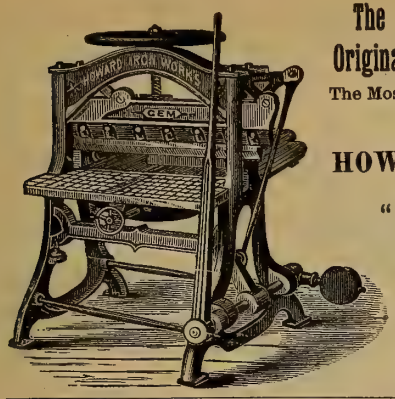
(Full Size.)
U. S. Patent, September 13, 1881, also patented in foreign countries.

This Pencil is the greatest novelty of the season; contains valuable features never before combined in any lead pencil. It sets the lead automatically, ready for use, and by a single motion the lead is retired within the case after using. It is the most substantial Pencil ever produced, is handsomely made with Hard Rubber Case, Nickel or Gold-Plated Trimmings, as desired. It sells at sight.

The demand for the above goods is constantly increasing, due entirely to their superiority over all others. They are made by the Stylographic Pen Co., of Providence, R. I., who own and run the Largest Factory in the World devoted entirely to this class of goods.

STYLOGRAPHIC INKS,

Especially adapted for Stylographic Pens,



IN COLORS, BLACK AND COPYING.

Now in use in over Half a Million Stylographic Pens, and unexcelled for general use.

TESTIMONY OF LIEUT.-GOV. BYRON WESTON.

I witnessed the test made by your Superintendent of the fire-proof qualities of an express chest and bond and note case manufactured by the Magneso-Calcite Fire-Proof Company, at Nantasket Beach, on Friday last. After being embedded in coals for one and one-half hours, the contents of the express chest, consisting of papers, greenbacks and lucifer matches, were found to be in perfect condition, there being nothing to indicate that they had been near a fire except a slight smell of smoke. Upon opening the small bond and note case, its contents were found to be in equally as good condition as those of the express chest, although it had been exposed to a severe test for more than half an hour. There can be no question but that the material used by your company is perfectly fire-proof.

DALTON, MASS., August 30, 1881. Yours truly, (Signed) BYRON WESTON.

FRENCH POSTAL STATISTICS.

The London *Times* gives the following summary of a comparative statement issued by the French Minister of the Post Office, and covering the transactions of that branch from 1877 to 1881:

"A comparative statement has been issued by the French Minister of the Post Office of the transactions from 1877 to 1881. The total amount of letters and parcels of all kinds rose from 865,000,000 in 1877 to 1,350,000,000 in 1881, the proportion being for stamped letters from 374,000,000 to 563,000,000; newspapers, from 219,000,000 to 354,000,000; printed matter in hand, 161,000,000 to 297,000,000; in envelopes, from 14,000,000 to 50,000,000. Post-cards, on the other hand, have undergone a diminution from 32,800,000 to 32,234,000. The department may well be satisfied with the increase of 56 per cent. in four years. The telegraphic service has been even more successful, showing an increase of 138 per cent. In 1877 the number of telegrams dispatched was 8,174,000 (of which 994,000 were international), against 19,466,000 in 1882 (of which 1,952,000 were international). The parcel-post was only commenced in the month of May last year, but since then its progress has been most rapid, increasing from 349,676 parcels in May to 808,732 in December. The total dispatches during the eight months were 4,186,867.

COATING INSECTS, LEAVES, AND FLOWERS WITH COPPER.

The proper preparation of the articles to be coated is more important than the special form of battery to be used. A leaf, for instance, should be carefully dried between blotters in a warm place. Next it should be coated with some thin varnish, or dipped into melted wax, and then brushed over with "electro-plater's plumbago" in order to give it a surface capable of conducting electricity. A very fine copper wire is then attached and made to actually touch the plumbago coating. The leaf may now be suspended in a bath containing.

Sulphate of copper ("blue vitriol")..... 4 ounces.
Sulphuric acid ¼ ounce.
Water, cistern..... 1 quart.

Into this liquid is placed a small "porous cell" (a flower-pot with the bottom corked will answer). The porous cell is partly filled with a mixture of

Sulphuric acid..... 1 ounce.
Rain water..... 12 ounces.

Into this liquid insert a small rod of cast zinc in such a manner as to expose less surface to the action of the acid than the surface of the leaf to be coated. Now connect the upper part of the zinc rod with the fine wire from the leaf. Copper will be slowly deposited. If done too fast the coating will not be perfect.

TWELFTH YEAR OF PUBLICATION.

THE PRINTING TIMES AND LITHOGRAPHER.

An Illustrated Technical and Fine-Art Journal of *Typography, Lithography, Paper-Making, and the Auxiliary Trades.*

THE NEW SERIES COMMENCED JANUARY, 1875.

THE PRINTING TIMES AND LITHOGRAPHER is a high class journal, devoted to the Printing and Graphic Arts, in all their various forms. It derives its information from, and circulates in, all parts of the world. No pains are spared to insure the accuracy of its intelligence and to render it in every respect worthy of the support of Letterpress Printers and Lithographers, as well as Artists, Antiquaries, and Literary Men generally.

Published on the 15th of each month, 4to, in wrapper, price 6d. Annual subscription (payable in advance), 8s., post free to the United States. Rates of Subscriptions for foreign countries on application. Post-office orders to be made payable at the West Central District Post Office, High Holborn, to **WYMAN & SONS**, 74 and 75 Great Queen Street, London, W. C., England.

Power Embossing PRESS.

THIS is a powerful and simple machine, and is complete in every respect. The power can be thrown off and a break stops the bed instantly, thereby saving any covers or expensive plates from being damaged. The press is worked by a cam and toggle; the impression is regulated by bevel-cut gears on top, and the bed platen can be run up or down by hand-wheel on left side. Our new method of using steel rods makes the press much stronger than iron cast frames. It has a movable bed; can be used for steam or gas heat; is supplied with oil cups. This Embosser is strong and large enough for all regular work in a bindery.

Space between upright rods, 17 ins. Size of head, 9½ × 13½ ins.

PRICE, $375.00.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**
Each sheet is water-marked with name and date.

LOCKWOOD PRESS, 74 Duane Street, New York.

The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. XII.---NO. 24. NEW YORK, DECEMBER 14, 1882. WHOLE NO. 390.

Correspondence.

DAYTON DOTS.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, Ohio, December 11, 1882.

Our cold wave has come and gone. While it was here trade brightened up considerably, and we hope it will keep up until after the holidays. There is no denying the fact that it is dull throughout this section of the country.

Among jobbers trade was early—and was over early likewise, and they are doing nothing worth speaking of. The retailers are just beginning to have some trade. A visit among our stationers is very attractive. Now, books that formerly held the front place are pushed back, and cards, fancy goods, bronzes, toilet sets, &c., are pushed to the front instead.

The Holden Manufacturing Company has opened out a branch for the Christmas season on Second street, near its main store. Charles E. Conover is in charge of it, and his fairy-like form, as he glides in his graceful manner among the evergreens and decorations, reminds one of the Christmas pantomimes of our youth.

John H. Thomas has his store very prettily decorated, and confines himself a little more closely to the legitimate stock of a stationer than any of the others.

Mr. Rickey shows some very pretty goods in his windows. Speaking of windows, about every correspondent of the STATIONER, has aired his views or knowledge of how they ought to be trimmed to make the most effective display. I don't pretend to know anything about window decoration as an art.

If we only wrote about what we knew, most of us could confine our epistles to postal cards; but I have my views as to what to me seems most appropriate—and that is, not to get your window too full of goods; not to get them arranged in too much like geometrical order, to have some central attraction in the window, around which the smaller articles can be arranged in a sort of solar system. A window to me looks best when it seems to have been arranged in an easy, careless style. I don't mean to have the goods pitched in any way; but don't have the goods in, as we say in the West, "apple-pie order."

I think that a good many booksellers could learn a little from that bane of American travel, the train news-slinger. We all know how we feel when he throws in our lap the *North American Review* or the *Atlantic Monthly*. We feel that our brilliant intellectual qualities shine forth so that even the newsboy sees them. If a bookseller would make it a point to study the tastes of his customers, and arrange his new books to catch the eye, or carelessly show him books that were adapted to his tastes or nts, a good many more would be sold.

Our dry-goods merchants in Dayton have not caused any trouble by selling books at cost, or about that, as has been the case in a good many cities. I notice the various plans suggested to cure or stop this evil. I think that the one suggested a year or two ago is the most feasible; and that is, let the different stationers in a city where such a state of affairs exists, combine, to each sell a few articles that pay most profit in the dry-goods trade; at cost, let one sell gloves and handkerchiefs, another laces, &c. I think that there would be some howling done, but the stationers would not be doing it. You cannot keep the dry-goods merchant from purchasing books as long as he has money or credit.

Travelers are scarce since my last letter. Gunn, with Faber; Wolf, of Wolf Brothers; Weingarten, of S. Freer & Son; Watkins, of the American Lead Pencil Company, and Classon, with Plimpton Manufacturing Company, have been here. They all seem in good spirits.

Among the mills I find trade not very buoyant. Rag and straw papers are lower than I ever knew them to be. There is no price. You can hardly make an offer that a mill will not accept. It only goes to prove what I have all the time asserted, that there are too many mills in the

MIAMI VALLEY.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., December 12, 1882.

Good winter weather has induced a good volume of trade, and, generally speaking, the stationers are well satisfied with the situation, the wholesalers having about all they can attend to, while the jobbers are busy in giving the express companies and the errand boys all of the packages they can conveniently handle. The retail trade, of course, is just booming, and it will remain so until after the holidays.

Ward & Gay, and other heavy dealers in papers, cards, &c., report a constantly growing trade in Christmas cards, and, in addition to the English and German makers, Prang's Christmas cards are attracting much attention. I refer particularly to his seven prize cards, all in the market at the present time. Our citizens regard Mr. Prang as an artist of the highest type, and his large manufactory, in the Roxbury district, is a splendid monument of his success in this direction. It is pleasant to know, in this direction, that New England talent has been a powerful adjunct to his success. It is evident that the people desire something striking, showy or pretty in a Christmas card, but it is also obvious that wanted are not yet educated in art beyond this. No doubt, however, Mr. Prang may bring the average American taste higher, but it is yet rudimentary to this extent. He has striven to have everything in keeping in his seven Christmas cards, even to the poetry accompanying the designs. Apropos, John S. Clark, formerly of the firm of Fields, Osgood & Co. and James R. Osgood & Co., has been connected for some time with Mr. Prang in the educational department of his business, which is large, and which Mr. Clark manages ably.

Among the goods considerably sought for holiday purchase, I notice the finest lines of stationery goods which the best English and French manufacturers can produce, although some American lines are not to be put off. The beautiful boxes filled with the richest paper, envelopes, &c., are among the choice selections for presents. And then there are the unique Bezique boxes in cloth and leather, the newest patterns of playing cards, olive-wood inkstands, and a profusion also of fancy goods, such as can be found at the first-class stationers.

I should have mentioned above that "The Prang Educational Company" is the name of a corporation formed for the purpose of publishing and selling educational works, and manufacturing and supplying educational apparatus and materials, of which the stockholders are Louis Prang, John S. Clark, George A. Smith and Charles H. Ames. It places the educational department of L. Prang & Co. on a new basis.

Clark's Blue Book, 1883, which has become a necessity to so many of the *élite* of the "Hub" and the vicinity, is just issued. The list of contents is admirably arranged.

Dealers vie with each other in attractive windows for the display of holiday goods. The stationers are not a whit behind their neighbors in this respect.

Speaking of art reminds me of the jealousy shown in one of the Boston daily papers, the other day, of New York city, which is founding an authors' club, "with a view, it is said, of emphasizing the fact that that city is the literary and artistic" as well as the commercial metropolis. The paper nonchalantly says: "The same forces that have worked against the idea before will most likely work against it still. The literary and artistic life of that city has always lacked adhesion; it has lacked local pride—save such as non-producers furnished. It was not a part of it, for New York can hardly claim to raise talent; it only buys it. The talent emigrates thither to earn money. * * * But in

literature Boston still holds the cream, and will be the most likely to fill up the ranks as the inevitable reductions take place. New York as yet lacks the very first elemental aid to literary nurture."

Now, I don't quote this against New York as proving anything, but simply to show how prejudiced some people are.

Handsome 1883 calendars have made their appearance.

The Wm. H. Brett Engraving Company is producing some splendid specimens of artistic work.

Manufacturers of account-books are knee-high in work.

No changes among the stationers reported as yet for 1883. Possibly two or three new firms.

L.

CINCINNATI CLIPS.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., December 11, 1882.

Who feels the "ups" and "downs" in business soonest? Who in the manufacturing [illegible] tries? Not the ups and downs in the way [illegible] said fluctuations and vicissitudes in his own particular business, but in that of other men. Not in that of other men within his elbow-reach or further away in his own immediate vicinity, but in a range of country comprised within the sweep of a radius whose extremity touches the uttermost limits of the regions commercially tributary to the trade centre in which his wo[illegible] may be located. Is there any surer, more delicate, more sensitive, more trustworthy gauge of the sanitary condition of general trade and of its present or prospective intensity than the daily business experience of a manufacturing stationer? Isn't he the first man to discover the fact when business men generally cut short their usual supply of commercial blanks, and of account-books and ledgers, and also, on the other hand, when there is a general increase of supplies of this description by merchants and manufacturers? Can't he, by these indications alone, sift out the branches of industry which are booming or are about to boom from other branches which are suffering a stagnation or are in apprehension of such a fate? Take the present situation in and around Cincinnati as an example. One manufacturer of blank books and other commercial goods says, "Some of the tobacco manufacturers have countermanded orders which they gave two months ago, and have substituted smaller ones, and others have cancelled their orders entirely. They all give as a reason that they want to wait and see how this proposed nternal revenue revolution is going to turn out." This circumstance influences in a similar way on this point all classes of manufacturers whose products are subject to internal revenue taxation. Printers of labels feel it. Manufacturing stationers who have patent medicine compounders for their customers feel it. All this class of work in Cincinnati now is ordered in small present-use installments. Playing cards are going out in extremely small quantities from Russell, Morgan & Co.'s great factory, and there is a similar check to orders for stamped bank-check books.

As to the trade in general in this Cincinnati region—the trade comprised in the great staple classes not disturbed by any such thing as "an uncertainty about what Congress is going to do that may modify some of its artificial conditions"—in short, as to those branches of trade which have never been hampered by artificial conditions imposed upon them by legislation—as to such branches the manufacturing stationers' gauge makes no uncertain record. A manufacturer who turns out blank books almost by the cart-load hourly, says: "Well, we never saw just such a time as this. At no time in our long experience have we so generally and so generously (as to quantity) supplied established business firms with new sets of books for the New Year as we have been doing now, are still doing, and seem likely to continue doing for some time for use in the year 1883." He was plied with the query, "Do you find new firms starting and old ones going out of business." His answer was, "No, sir; nothing of the kind. There are a few changes in the style and composition of firms. These are of a nature to increase the number of men in business in some instances, but neither to increase nor to diminish the number of business firms. It also indicates very strongly a general tendency to enlarge business and increase its volume, all of which show the general prevalence of faith in the immediate commercial future."

All this was satisfactory as far as it went, but it stopped too soon; so another question. "Do you restrict the application of what you have said to Cincinnati," was asked. To this the reply was cumulatively emphatic, "By no means; by no means. Why, sir, what I have said applies to the whole country commercially tributary to Cincinnati, certainly as much; but if there is any difference more than to the city." All this was flattering, but it did not fully appease curiosity on the subject, hence another question, namely: "Do you find new devices and styles of office blanks to expedite business in request along with the standard styles?" This brought the reply: "You ought to see our orders for this line of work. Why they reinforce the indications of larger trade given by the increased call for blank books. There is a corresponding increase of the size of orders for standard counting-house stationery, and the number of novel ingenious devices for methodizing and expediting business that we have orders for would astonish you. We are already astonished. The fact is, all in all, we never saw the like in all our experience, and as far as we can learn, the same thing has happened to all the manufacturing trade in our line in Cincinnati."

Touching the relations of the manufacture of stationery goods to other branches of business, a remark by a prominent manufacturer and stationer here, suggested a point that would occur to one spontaneously, but which is obvious enough to every one once it has been suggested. The gentleman was talking about "fixing" up the interiors of stationers' shops artistically, and referred to the example of the striking taste displayed by the arrangement of goods in a certain Fourth street grocery in this city, where more staple than fancy goods are sold, and he said: "But you know a grocer has such an array of splendid colored labels on his packages." That is a fact and one of recent date. But it is the manufacturing stationer (a printer is a kin to a stationer and a label maker is a stationery manufacturer) who turns out these splendid labels. If that is the secret of this interior shop decoration (and it is a part of it, but only a part), why can't the stationer, who does so much to beautify other men's shops, do as much to beautify his own?

It is not time now to say much about holiday trade. Let me dismiss it with the observation, that the prospect is brilliant, and that, as usual, most dealers in the stationery line here have underestimated it. In another letter it can be treated more in detail, and before long it may be dealt with historically.

Fulton's gravity scales are meeting with a remarkable favor. The company is causing an inspection of each individual piece of work, accompanied by a test, before anything is sent out. It makes office, family and counter scales, several grades of each, making twelve grades in all. As to finish and form, the company is constantly busy devising improvements and modifications to suit all tastes and fancies. These scales are in use in the Cincinnati post-office and in about four hundred other post-offices. Orders for them are cumulative. There is a reason for this. Fulton hasn't hidden his light under a bushel, as some men do, and afterward wondered, as some men do, why people did'nt see the shine of it.

Traveling men are quite generally going home. Most of the calls here are brief visits on their return East. They bring golden reports. Everything here looks cheerful. A cold spell set in last week—Wednesday midnight. It has about stopped river navigation. It has also driven farmers from the fields, and given them time to think about the holidays. This change has already improved business, and it is believed its effect will be more forcibly felt this week and next.

PRINCE WILLIAM.

TORONTO TALKS.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, Ont., December 9, 1882.

We have had good sleighing for two weeks, and hope it may continue; but the confounded thermometer has on different occasions, during that time threatened a reversal. However, it sticks yet, and we have had more snow already in this vicinity than we had all last winter. With us at this season sleighing is of vital importance to the retail trade. Last Saturday and Sunday reminded us of an old-fashioned Canadian winter. It is a good while since we have seen anything like it in Toronto. The streets were gay with sleighs, cutters, bobs and busters, and the nags attached thereto were put through their paces, you bet! La Belle Canadienne swept by to the jingle of merry bells, radiant and happy. Promenaders moved along at double-quick step; it was too cold to saunter in front of shop windows, although they are unusually attractive just now.

The display of holiday goods and Christmas cards is a long way in advance of former years. The quantity and variety of cards shown is surprising, and if one-half of them are sold and properly distributed everybody in the Dominion will be the possessor of a dozen or more. Several houses have opened branches in different parts of the city to push them off, and we hope all will succeed, but we are of the opinion that far too many have been bought; that enough will be left in hand to use up the profits, and thus spoil what might under other circumstances be a good investment.

Davis & Henderson, wholesale stationers and blank-book manufacturers, have been enlarging their premises and putting in new machines. Their trade is rapidly increasing.

Robert Marshall, whose fine store I have mentioned before, is fully prepared to meet his customers with a large and admirably assorted stock of fancy and holiday goods, toys, &c.

Hart & Co., stationers, &c., who have a wide reputation for choice goods, are in full force. How the folk who have money and delight in expensive stationery can find it, or *recherché* leather goods, cabinets, desks, beautifully illustrated books, hand-painted Christmas cards; many of them gems of art, and all that sort of thing. It is both interesting and instructive to

look over the collection, gathered from far and near, of the choicest things made, which enter into the miscellaneous stock of the stationer; and nowhere in the city, and I may say Canada, is there such a rare display as at this house.

Willing & Williamson, booksellers, &c., whose fine premises are one of the prominent features of the city, are our leading booksellers, and carry an extensive stock of miscellaneous books. They do also in fine stationery, and fancy goods connected with it, and are, especially if he be a lover of books, can spend an hour or more with pleasure; but if his purse be light, it may prove a vexation. Here are holiday books without number—costly, beautiful, tempting; favorite authors in new dress, and so many one would like to lug away, that after all, as I said before, if one hasn't funds to spare, he must do the other thing. However, there are a large number who have the cash, and for these the house are fully prepared with a very large collection of the choicest holiday goods.

James Bain & Son, booksellers, &c. (an old and conservative house), are fully up to the times in their special lines. There stock is large and complete; they have an excellent trade, and are ready for their holiday friends with a selection of good things that will brighten up many a youthful face on Christmas Day.

Edwin Merritt, wall-paper and fancy goods, has a fine stock and a select trade. He has had a good season, and anticipates a first-rate holiday business, which he will no doubt have.

In the wholesale trade Brown Brothers are working day and night to keep up with orders. They have had a large sale of diaries, wallets and other special things of their own make, which they are now delivering.

Copp, Clark & Co. are unusually busy in every department of their trade, and so are W. I. Gage & Co., Barber & Ellis, Buntin Brothers & Co. I can say without hesitation that the branches of trade whose interests your paper is specially intended to promote, have never had a better season's business, nor never closed up a year with brighter prospects for the future.

The Methodist Book and Publishing House has completed the extensive alterations in its premises, and has now one of the largest and most complete establishments in the country. Its trade reaches to every part of the Dominion, and is increasing with great rapidity.

The transit of Venus, which scientists have been talking about so much, and which preparations were made to observe not only here but at other points in the Dominion, was, I am sorry to say, a failure at this point, owing to cloudy weather. Some good soul suggested a short time ago that prayers should be offered in all the churches for a cloudless sky during the transit. It was not acted on, and who shall say whether it would have made any difference. Anyway, Venus skipped across the sun's disk under a cloud here, too thick for any lens to penetrate; and as more than a hundred years will elapse before she will do it again, the chances for seeing it at another time are not good for the scientific men of to-day. C. H.

WOOD STAINS.

Mr. Leo, of Benshein, Germany, recommends the following stains for oak, pine, beech, poplar, &c.:

1. Yellow Stain.—Wash over with a hot, concentrated solution of picric acid, and when dry, polish the wood.

2. Ebony Black.—Wash with a concentrated aqueous solution of extract of logwood several times; then with a solution of acetate of iron of 14 degrees, Raume, which is repeated until a deep black is produced.

3. Gray.—One part of nitrate of silver dissolved in 50 parts of distilled water; wash over twice, then with hydrochloric acid, and afterward with water of ammonia. The wood is allowed to dry in the dark, and then finished in oil and polished.

4. Light Walnut.—Dissolve one part of permanganate of potassium in 30 parts of pure water, and apply twice in succession, and after an interval of five minutes wash with clean water, and when dry, oil and polish.

5. Dark Walnut.—Same as for light walnut, but, after the washing with water, the darker veins are made more prominent with a solution of acetate of iron.

6. Dark Mahogany.—Introduce into a bottle 15 grains alkanet root, 30 grains aloes, 30 grains powdered dragon's blood, 500 grains 95 per cent. alcohol, closing the mouth of the bottle with a piece of bladder, keeping it in a warm place for three or four days, with occasional shaking; then filtering the liquid. The wood is first mordanted with nitric acid, and, when dry, washed with the stain once or oftener, according to the desired shade; then the wood is dried, oiled and polished.

7. Light Mahogany.—Same as dark mahogany, but the stain being only applied once. The veins of true mahogany may be imitated by the use of acetate of iron skillfully applied.

The following cement will be as hard as stone when dry, and will adhere firmly to wood: Melt 1 oz. resin and 1 oz. of pure yellow wax in an iron pan, and thoroughly stir in 1 oz. of Venetian red, until a perfect mixture is formed. Use when hot. When cold it is as hard as stone.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U.S.A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

L. PRANG & CO'S

PRICE LISTS OF OUR VALENTINES ARE NOW READY.

PRICE LISTS OF OUR VALENTINES ARE NOW READY.

1883 VALENTINES 1883

WE hereby beg leave to announce to the Trade the completion of our line of Valentines for 1883, in the preparation of which we have put forward our best energies to keep up to the increasing demand for artistic goods. As a proof of our endeavors in this direction we would mention the following artists as contributors to our line for this year:

MISS FIDELIA BRIDGES,	MISS L. B. COMINS,	WALTER SATTERLEE,
MISS L. B. HUMPHREY,	MISS ROSE MUELLER,	JEAN AUBERT,
MRS. O. E. WHITNEY,	F. S. CHURCH,	Of Paris, etc.

Same as last season, we furnish our Valentines plain, and also single and double, with silk fringe. All fringed cards are provided with protectors and envelopes to insure safe transmission through the mails.

Envelopes are furnished, **without extra charge,** for all cards costing $1.80 per set and over.

Attention is called to the **elegantly designed backs, a special feature of our cards,** adding greatly to the artistic value of the same.

Our assortment of plain cards ranges in price from 35 cents per set to $6 per set, and of fringed cards, from $1.60 to $12 per set.

Special attention is called to the **AUBERT VALENTINE** (so named after the eminent French artist Aubert, who designed the picture of the lovely girl contained therein.)

A large folding card with a wreath of flowers, printed on satin, and designed by Miss F. Bridges; facing this is the design by Aubert. The card is heavily fringed with silk, has a leatherette protector, and each card is encased in a neat box. Price, each, $5.

Of all Valentines costing $3 per Set and over, we are ready to break sets, if so desired.

REGULAR DISCOUNTS TO THE TRADE FROM ABOVE PRICES.

Besides the above attention is called to our **New Birthday Cards** and **Artistic Plaques** and other **Art Publications.**

OUR LINE OF EASTER CARDS WILL SHORTLY BE ANNOUNCED.

THE LIVERMORE STYLOGRAPHIC PEN.

(Full Size.)
Patented January 4, 1881.

Endorsed unanimously by the Trade as giving perfect satisfaction to their customers. Many say "It is the only Stylographic Pen worth having at any price." More of these goods are sold and used than of all others combined. They always command a ready sale; try them.

(Closed.)

(Open.)

Our New Pen, "THE MONARCH," has the reverse case—closing up short for the vest pocket—holds a large quantity of ink and is made very strong and substantial.

LIVERMORE'S STYLOGRAPHIC LEAD PENCIL.

(Full Size.)
U. S. Patent, September 13, 1881, also patented in foreign countries.

This Pencil is the greatest novelty of the season; contains valuable features never before combined in any lead pencil. It sets the lead automatically, ready for use, and by a single motion the lead is retired within the case after using. It is the most substantial Pencil ever produced, is handsomely made with Hard Rubber Case, Nickel or Gold-Plated Trimmings, as desired. It sells at sight.

The demand for the above goods is constantly increasing, due entirely to their superiority over all others. They are made by the Stylographic Pen Co., of Providence, R. I., who own and run the Largest Factory in the World devoted entirely to this class of goods.

STYLOGRAPHIC INKS,

Especially adapted for Stylographic Pens,

IN COLORS, BLACK AND COPYING.

Now in use in over Half a Million Stylographic Pens, and unexcelled for general use.

TO THE TRADE:

Having made arrangements with the Magneso-Calcite Fire-Proof Company (after careful examination), we are now prepared to supply the Trade with **BOND, NOTE AND JEWEL CASES,** with their Patent Linings. Bond and Note Cases are of Japanned Iron, with Locks; Jewel Cases, Iron, covered in Colored Plushes, and Satin and Silk Linings—very handsome.

No. 1.	Bond and Note, each	$6.00
No. 2.	" " "	8.00
No. 3.	" " "	10 00
No. 1.	Jewel Case, each	15.00
No. 2.	" " "	18.00
No. 3.	" " "	20.00
No. 4.	" " "	25.00

TESTIMONY OF LIEUT.-GOV. BYRON WESTON.

I witnessed the test made by your Superintendent of the fire-proof qualities of an express chest and bond and note case manufactured by the Magneso-Calcite Fire-Proof Company, at Nantasket Beach, on Friday last. After being embedded in coals for one and one-half hours, the contents of the express chest, consisting of papers, greenbacks and lucifer matches, were found to be in perfect condition, there being nothing to indicate that they had been near a fire except a slight smell of smoke. Upon opening the small bond and note case, its contents were found to be in equally as good condition as those of the express chest, although it had been exposed to a severe test for more than half an hour. There can be no question but that the material used by your company is perfectly fire-proof.

DALTON, MASS., August 30, 1881. Yours truly, (Signed) BYRON WESTON.

ART PHOTOGRAPHS,

PUBLISHED -BY-

CHICAGO PICTURE CO.

Send 50 cts. postage for Samples of all our Advertising Cards. **70 State Street, Chicago.**

JOHN HOLLAND, Patentee and Manufacturer of Gold Pens, Pencil Cases, Fine Pen Holders, &c., **No. 19 West Fourth St., CINCINNATI, Ohio.**

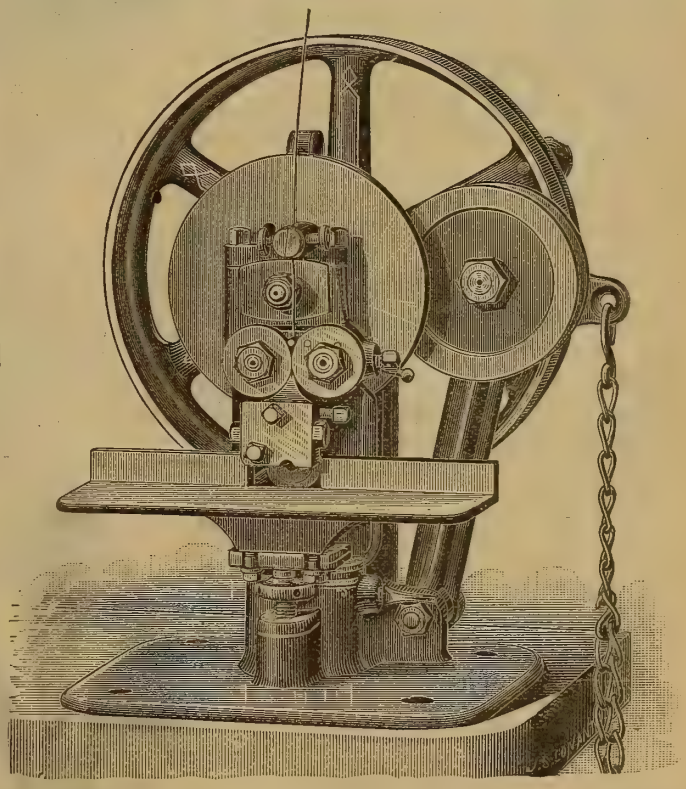
1882. # PAPER HANGINGS. 1883.

By way of Customary Annual to the Trade, we beg to submit that the Samples now in our Agents' hands for Fall and Spring have been selected with most scrupulous care, and after an exhaustive examination of **All New Designs** cut by Standard Factories for the season's distribution.

We claim for the product a far **Higher Degree of Excellence** than heretofore compassed by any individual House, approximating, as closely as possible, a **Perfect Assortment.** Prices being equal, the comparative merit of those lines submitted to your notice will doubtless, to a great extent, control selection.

We challenge and respectfully solicit direct comparison of our collection with those of any other Houses representing that branch of artistic industry which is our **Exclusive Specialty.**

The untiring effort of over thirty years, which has resulted in our sales being the largest recorded for the past two seasons, has also given us an intimate knowledge of the wants of that widely extended trade to which we cater. This fact, coupled with unvarying promptness and watchful care of our customers' interests, will, we feel assured, secure for us a continuance of your esteemed patronage.



Our Agent will indicate, by direct correspondence, the date of his visit. Failing receipt of such advice, Samples shall be forwarded, free of expense, upon receipt of request.

Very truly yours,

JOHN J. McGRATH,

174 & 176 State St., Chicago.

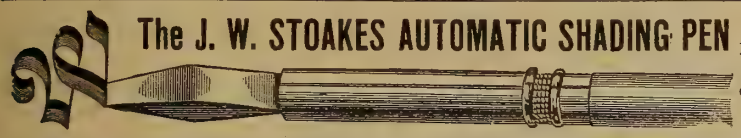
"ABROAD."

Owing to the great success of **"At Home"** last season, we have this year issued the **New Art Gift Book—"ABROAD"** —for the Holidays; to be of uniform size and a companion piece of **"At Home."**



"Abroad" far surpasses its companion both in **Decoration and Illustration.** Each page being a study in itself. The quaint little English Children are in this Book represented on a tour of pleasure through France. Those who have been "Abroad" cannot fail to recognize the beautifully executed drawings of places of interest. The appropriate verses accompanying each illustration make this work a handsome memento and Holiday Gift. Decorated by THOS. CRANE. Illustrated by ELLEN HOUGHTEN.

Price, $2.50. "AT HOME" published this year at $2.00.

MARCUS·WARD·&·CO.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

M. F. Tobin is doing an immense business.

D. M. Bennett, publisher, New York city, is dead.

Hendrix & Clark, printers, McKenzie, Tenn., have sold out.

A. M. Hovey & Co., publishers, Augusta, Me., are in insolvency.

E. A. Fay, paper dealer, Davenport, Iowa, has made an assignment.

F. H. Taft, publisher, Humboldt, Iowa, has sold out to Bissell & Kenyon.

Akehurst, Utica, as usual, makes a neat announcement of his holiday offerings.

G. P. Miller, publisher of the *Observer*, Corsicana, Tex., has sold out to B. H. Wood, Sr.

A. G. Waite, card-board manufacturer, Hubbardstown, Mass., has been burned out, partly insured.

McBurney, Linton & Co., dealers in wall-paper, &c., Youngstown, Ohio, have sold out to Thomas McRee.

F. R. Christman, dealer in books and stationery, Hutchinson, Kan., has sold out to Mrs. E. J. Kinman.

S. A. Maxwell & Co., wholesale booksellers and stationers, Chicago and Bloomington, Ill., have sold out the business at the latter place to William R. Rogers.

Glass & Son, publishers of the *Pan-Handle News*, Wellsburg, W. Va., have dissolved partnership, and a new firm has been formed under the style of F. C. & Wm. Glass.

Teel & Badet, manufacturers of croquet and toys, South Bend, Ind., will be succeeded January 1, 1883, by the South Bend Toy Manufacturing Company, with a capital of $30,000.

A large brick building at Northampton, Mass., owned by Isaac Jones, and occupied by the Nonotuck Pocket-Book Company, the *Hampshire County Journal*, and others, was burned on last Thursday night, little of value being saved. Loss, $30,000; insurance on building, $600.

Philip R. Ammidon, dealer in paper hangings, Boston, Mass., has failed and will settle in insolvency. Liabilities $47,679, a large part of which is secured by 1,537 shares of stock in the Elevator Safety Attachment Company. The assets for the unsecured creditors are merely nominal.

John P. Morton & Co., Louisville, Ky., forward two calendars for 1883. One comes in a single sheet, 30x20 inches in size, and in addition to the dates of 1883 gives those of the first six months of 1884. It is printed in gold and colors and is otherwise neatly gotten up. The other comes in pad form giving the dates of a month on each leaf.

Warfel & Geist, publishers of the *New Era*, Lancaster, Pa., have got out a very neat calendar for 1883. It is so constructed that the dates of one month are made to do for the remaining eleven, and this is effected by the pads being placed at the top, containing only the names of the months and days. By removing any slip from the pad, the relation of the days of the week to the days of the month will be shown. The calendar is done in colors.

The Chicago, Rock Island and Pacific Railway has in press an almanac and hand-book of useful information, containing a vast amount of matter which it is handy to have available and which all classes of people want sometime during the year. The book contains descriptions of the Western States and Territories, a list of United States land offices, where lands are available at low rates, how obtained, &c., as well as interest tables, business law, rates of postage and political facts and figures. In fact, it is *multum in parvo*, and all the much is of everyday use. The same road also publishes a Christmas book for children, which contains several fine illustrations, and is original matter, and a piece of sheet music, arranged for piano and a quartet of voices. Either, or both of these books and the music will be sent post free, if requested, by postal or letter. The earlier orders are sent to E. St. John, General Ticket and Passenger Agent, Chicago, the quicker the books can be had.

McLoughlin Brothers having purchased all of the comic valentine plates of the late A. J. Fisher are now the only manufacturers of comic valentines in this country. They have added to their line many new designs of comics, besides all of the good ones from Mr. Fisher's stock, which increases their heretofore large line to over one thousand different kinds. They have also added new styles to their line of sentimental valentines, including some entirely new designs of easel valentines, which met with such general favor last season, and a line of transformation valentines, which will, no doubt, meet with a ready sale. A new catalogue will be ready by January 1, and full particulars will appear in the advertising columns of the STATIONER in due season.

Thos. Kane & Co., Chicago, Ill., have issued a little slip to the trade, showing the comparative sales of "Victor" slates during October, 1881, and the same month of the present year, as follows: October, 1881, Victor "A," "B," and "Kane's Double," 14,236; 1882, Victor "A," "B," and "Kane's Double," 27,265; 1882, Victor "C" (Kane's patent), 25,927, making a total of 53,191 slates during October of this year, and showing an increase over the corresponding period last year of 38,956. The "C" slate was intended to supplant the common "D," and the manufacturers claim that it has succeeded in doing so without injuring the sale of the Victor "A."

The Fulton Gravity Scale Company, Cincinnati, has been compelled, by the increasing demand for its superior scales, to remove to 126 Walnut street in that city. The company has made some valuable improvements on its scales, thereby adding to their convenience and durability.

Sebill & Hyer, 206 Pearl street, are about to publish an illustrated catalogue for circulation among the national banks and bankers.

A. M. Collins, Son & Co., Philadelphia, have issued a new price-list of panel cards. This is a desirable list for reference.

Smith & Wilkes, dealers in stationery, &c., Fort Worth, Tex., have dissolved partnership. T. J. Smith continues.

Carufel & Ayotte, stationers, Three Rivers, Quebec, have dissolved partnership.

C. S. Bradburn, dealer in wall-paper, Bradford, Pa., has been burned out.

R. G. Boyd, publisher of the *News and Farmer*, Louisville, Ga., is dead.

Williams Brothers, printers, Syracuse, Ohio, have moved to Pomeroy.

George Alvord, job printer, Winchester, Conn., is dead.

H. R. Enoch, printer, Rockford, Ill., has sold out to Kimball & Co.

W. P. Knight, publisher, Petersburg, Ind., has been burned out; insured.

The *American Bookseller*, Christmas number, is a beauty of illustration and printing.

Frank F. Livermore, publisher of the *Gazette*, Lanark, Ill., has sold out to L. G. Burrows.

Louis Prang, of L. Prang & Co., Boston, has been visiting this city during the present week.

McCarty & Hasberg have still left a few bargains in holiday goods, which the trade should see.

Geo. W. Reed & Co., Pittsburgh, invite the attention of holiday buyers with a very nice engraved card.

Tipton & Rutledge, booksellers and stationers, Cleburne, Tex., have dissolved partnership. Mr. Tipton succeeds.

A. Williams & Co., Boston, have published "Songs of an Idle Hour," a collection of verses by Wm. J. Coughlin.

Moore, Sproul & Nichols, manufacturers of paper boxes, New Haven, Conn., have dissolved partnership. James L. Moore has retired, and Frederick L. Benton is admitted. The style of the new firm is Benton, Sproul & Nichols.

A fire broke out on Saturday evening on the second floor of an extension building in the rear of No. 159 West Twenty-ninth street, this city, occupied by the Union Paper Box Company, and did $12,500 damage. The Union Paper Box Company loses $2,500, but is fully insured.

French & Choate, 4 Bond street, have issued their 1883 catalogue of stationers' specialties, which all in the trade ought to have. They are agents for some very desirable goods, among which may be mentioned the Beach writing tablet, which is offered as one of the best writing facilities known to the trade.

The "Publishers' Trade List Annual" (September, 1882), F. Leypoldt, publisher, has come to hand. It embraces the latest catalogues supplied by publishers, and is preceded by a verbatim reprint of the *Publishers' Weekly* record of books issued during the year ended June 30, 1882, with a complete index of authors, titles and subjects. It also comprises the American Educational Catalogue for 1882. It is a valuable and inexpensive record for the use of the bookseller.

J. H. Bufford's Sons have erected an elegant show-case in the centre of their beautiful warerooms, 293 and 295 Broadway. The top is of French plate cut glass in a mahogany frame, and is intended for the exhibition of samples of fancy cards. There are two rows of drawers, the top of which can be removed at pleasure so that the contents of the lower one can be seen. The case is in horseshoe form, and cost $500. This store is now very handsome, and is a credit to its proprietors.

There has been considerable rivalry among slate manufacturers as to the right of using the cord muffler. The United States Patent Office has lately granted (September 26, 1882) to Thomas Kane & Co., Chicago, Ill., a reissue of a patent allowing the following claims: "A muffling cord applied in a spiral or winding form to the edge of a slate frame, and protecting the same both on the edge and the two side faces;" and "a slate frame having both side faces and the outer edge protected by a single cord of muffling material applied spirally through and

around the edge." This may be deemed of interest to manufacturers as well as dealers.

J. B. Scott, publisher of the *Journal*, Delphi, Ind., has sold out.

William D. Smith, stationer, Utica, N. Y., has advertised to sell out.

O. F. Knowles, of O. F. Knowles & Co., printer, Bangor, Me., is dead.

A. C. Kuster, stationer, &c., Whitehall, Mich., has sold out to H. H. Ashman.

G. A. Smith & Co., dealers in school supplies, Boston, Mass., have dissolved partnership.

A. B. Johnson, publisher of the *Journal*, Castle Rock, Col., has sold out to Waller & Price.

D. Moxley & Co., dealers in stationery, &c., Billings, Mo., have sold out to Kinsbury & Herrick.

The attention of the trade is invited to an advertisement of Henry Levy & Son in another column.

Allen & Thompson, publishers of the *Express*, Terre Haute, Ind., have dissolved partnership. H. G. Thompson retires.

Rankin & Lawton (Mound City Bag and Printing Company), St. Louis, Mo., have been damaged by fire ; insured.

John S. Clark has retired from the firm of L. Prang & Co., publishers, Boston, and has become a member of the Prang Educational Company, which has just been formed, with L. Prang, John S. Clark, Geo. A. Smith and Chas. H. Ames as stockholders and incorporators.

Charles J. Cohen, Philadelphia, reports a very active trade in fancy goods and stationers' specialties. Many out-of-town buyers have been in the establishment during the past fortnight, which, together with travelers' and mail orders, have kept all hands very fully occupied.

On January 1 the New England School Furnishing Company will retire from the jobbing stationery trade. The school furniture and school supply business, together with the specialties formerly kept by the company, will be continued under the same name at the same place, 27 Franklin street, Boston.

Charles J. Cohen, Philadelphia, reports considerable activity in the purchase of holiday goods from the near-by trade, and very many mail orders from the customers of the house throughout the country for such articles as are required for special orders. The assorted box of card envelopes originated by Mr. Cohen has been a great success, filling a want long felt by every member of the trade.

The trial of an action for the recovery of alleged excessive duties was begun on Wednesday before Judge Cox and a jury, in the United States Circuit Court, by Alois Diepenbock against Collector Robertson. Mr. Diepenbock is the agent and manager in this city of Frederick Pastel, the manufacturer of church material and statuary. The plaintiff has for years past received importations from Mayer's Art Institute, in Munich, of church statuary, upon which the government formerly charged 10 per cent. duty. A few years ago, however, the customs officers classified these statues as being manufactured of a mineral substance, and not the works of a sculptor, and imposed a duty of 40 per cent. ad valorem. A year ago Mr. Diepenbock brought suit against the former collector, General Merritt, for the recovery of excessive duties, and gained a verdict of $1,500. Notwithstanding this, Collector Robertson has continued the imposition of 40 per cent. duty. The amount involved is about $8,000.

Hard & Parsons, 126 and 128 Duane street, have now ready a new line of wedding goods for the spring trade, which embraces some twenty-six numbers, and is an entirely new departure from anything of the kind heretofore introduced. The trade will, doubtless, give this line a hearty reception. This firm is busy in its new stamping department, which it has recently added to its business. Some very fine work is expected from this department. The trade may be assured of new lines generally from every department of this house.

The amount received in the New York postoffice from the sale of stamps, postal cards, &c., during last week was $96,399.

F. M. Dallam, publisher of the *Journal*, Haywards, Cal., has sold out to G. Oakes.

John Petrie, Jr., expects a large shipment of French inks this week.

James Reid, dealer in fancy goods, Northampton, Mass., is closing out.

Hack, Anderson & Co., printers, Chicago, Ill., have been damaged by fire ; insured.

Kelley & Clare, printers and publishers, Watertown, N. Y., have dissolved partnership.

Lord & Bowman, publishers of the *Law Journal*, Columbus, Ohio, have dissolved partnership.

R. Worthington, New York, closing out his retail department, has just issued a clearance catalogue. The stock includes some of the finest books in the English language in every department of literature.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, DECEMBER 14, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

BY error, last week, we were made to say that we are in favor of abolishing the protective features of the tariff. It is scarcely probable that anyone failed to perceive the omission of the word *not*, but inasmuch as one reader of the STATIONER has asked for an explanation, it will suffice to say that we believe in the conservation of home industries to the fullest extent of protection necessary.

THE Bankrupt bill is again before Congress. It will probably meet with the usual voluminous discussion, and, if passed, be filled with numerous points for criticism and amendment. Now is the time for the different commercial bodies and trade organizations to stir around and examine every proposition which is intended to affect procedure in insolvency cases. It is quite apparent that we need a uniform practice in dealing with bankrupts, not only for conserving the rights of creditors, but for protecting honest debtors, and for summarily treating dishonest failures. We trust that the different stationers' boards of trade will not fail to pay attention to their obvious duty as representatives of a large business interest, and that what they have done in the past to suggest and perfect in the plan for a general bankrupt law will not be considered enough for the present emergency.

THE Cape Coast swindlers have again been heard from. They have been trying to lure C. B. Dickinson, of the Brooklyn Rubber Works, but, of course, failed in the attempt. Their demand upon him is quite amusing. Among the articles asked for is a "ream of envelopes," and they kindly offer to send him "two golden rings" if he will forward a "measurement" of his "two fingers." Application for samples has also been made to a well-known steel-pen manufacturer. It is not possible that anyone should be deceived by such vulgar attempts, but they are not the less nuisances, inasmuch as the postage is not prepaid, and the parties receiving the communications are required to pay twenty cents on each. The same game is being played upon the German trade, who are up to the dodge. We note, however, in one of our German contemporaries that some person writing from New York has been trying a similar plan for swindling, and that Brazil is also offering her share of the common stock of such frauds. Don't take any of it.

THE tariff and revenue agitation again adds distraction to business, and is affecting the stationery trade to a certain extent. Our Cincinnati letter, this week, points out how this is done in some lines, and we find upon inquiry here, that it has a very plain influence upon dealings. Wherever the recommendations of the Tariff Commission affect any interest, we may expect to find doubt and hesitancy. There is a disinclination to buy goods which would be ordered in quantities if there was no uncertainty as to their import value, and so in the case of suggested changes in internal-revenue taxation we find the same disagreeable and annoying feature. There is every reason why Congress should act promptly and with decision in determining whether it will change duties or taxes. When the trade of the country is doing fairly it ought to be relieved of all disturbance, and if changes are necessary, merchants ought not to be kept on the tenter-hooks of expectation or permitted to be long doubtful of legislation on such issues. We do not expect that anything will be done by Congress, and it is perhaps safe enough for people to go ahead and conduct their business as if nothing would be done, but of this every merchant must judge for himself.

OBITUARY.

ANTHONY TROLLOPE.

Anthony Trollope, the well-known English novelist, died on Wednesday, December 6. He was the second son of the late Thomas Anthony Trollope and Frances Trollope. He was borne in 1815, and educated at Winchester and Harrow, and was from 1834 until November, 1867, connected with the British post service. In 1869 he was an unsuccessful candidate for Parliament from Beverley. In person, Mr. Trollope was rather tall and finely proportioned. He was dignified in manner and pleasant in conversation. He wore a full beard which became gray quite early in life, and gave him a venerable appearance for many years.

LOUIS BLANC.

Jean Joseph Louis Blanc, commonly called Louis Blanc, the well-known French writer and agitator, whose death at Cannes was announced by telegraph on December 6, was born at Madrid October 28, 1813. His father, a Frenchman, held the office of inspector-general under Joseph Bonaparte, the "intrusive" king of Spain. He was educated for a diplomatic career, but his father was ruined by the French revolution of 1830, and he had to labor for a livelihood. When the revolution of 1848 occurred, Louis Blanc was appointed a member of the Pro-

visional Government. Having been falsely accused after the insurrection of June, of having conspired against the government, he was induced to go to England, where he lived and devoted himself to literary pursuits. Blanc returned to Paris just after the fall of Louis Napoleon, in September, 1870. In February, 1871, he was chosen a representative of the Seine in the Assembly, at the head of a list of forty-three candidates. He subsequently became a member of the Chamber of Deputies under the republic, and was re-elected after the dissolution by MacMahon. His personal character was admirable.

MERITED COMPLIMENTS.

L. Prang & Co. have received two very flattering though well-deserved compliments from abroad, which cannot fail to be highly pleasing to them coming from such sources. The first is found in a critique in the *Queen*, the leading fashion paper for ladies in England. It says, reviewing a very interesting exhibition of Christmas cards lately held in London: "Sorry as we are for the honor of the old country to confess it, but proud as we are for the honor of the young daughter over the sea to acknowledge it, we do acknowledge that, for artistic conception and imaginative rendering, added to the beauty of execution, the cards of Messrs. Prang, of Boston, distance every other. * * * Of deeper feeling is another—a group of lovely children singing Christmas carols; but beyond all for depth of meaning and power, is a card bearing the motto, 'Good tidings of great joy,'—a homeless mother, standing under a leafless, snow-laden tree, has a glorious vision of the Virgin Mother with the Babe in her arms. This is a true 'Christmas card.'" Soon after this, L. Prang & Co. received an order for a number of Christmas cards by telegraph from their agent in Germany, who now writes to them that this order was for the Crown Princess of Germany, who personally selected them, and expressed herself very much pleased with their beauty. L. Prang & Co. may be proud of two such acknowledgments in one season, and ought to feel encouraged to continue, as they have so far, their efforts to improve the high standard of their goods with every new season. That they do intend to do this is proved by their new line of valentine cards, which present a wonderful advance over last season.

PRESERVATION OF BOOKS.

About twenty-five years ago I was annoyed by finding the backs of several rows of books, some in a bookcase having glazed doors, which were kept locked, and others on adjoining open shelves, frequently mildewed. Wiping them carefully cleaned them only for a time, for fresh crops of mildew speedily disfigured them again. Remembering to have seen my father, who always made his own ink, finish off by pouring a small glass of spirits of wine into the ink jar, in order to prevent its becoming moldy, I lightly washed over the backs and covers of the books with spirits of wine, using as a brush the feather of a goose quill. I frequently saw the books during the next five years, and I have occasionally seen them since, and there has not, so far as I am aware, been a single spot of mildew on them since the spirits of wine were applied. I have used spirits of wine to prevent mildew with equally good effect in other cases. —*The Builder, February*, 1848.

CERAMIC DISCOVERIES IN SOUTHERN ITALY.

The discoveries made at Taronto in 1879 consisted for the most part of broken terra-cotta figures of antique origin, which are considered to have been votive figures from two temples which formerly existed at that spot. The explorations seem to have been singularly fruitful in their results, for, in addition to the 800 specimens in the Louvre Gallery in Paris, the Museum of Naples has been enriched of late with as many as 20,000 objects, collected under the supervision of Signor Viola, who has been acting in conjunction with the Italian Government in the matter.

Herr Jännicke has lately given in the *Thonindustrie Zeitung*, an interesting description of the principal features of these discoveries. Rough figures of small size form a large proportion of the objects found, the specimens of real artistic merit being estimated as only about one per cent. of the entire bulk, a male figure reclining, as if at meal-time. A female figure to correspond with this one is found more or less frequently among these objects. The length of the groups is from 8 to 16 inches. Several fragments which have been discovered indicate that large statuettes, three feet in height, were at one time made in this locality, though they have not been preserved intact according to the discoveries as yet made.

The busts which have been found are numerous, and are typical of the development of art from the seventh century before Christ to the destruction of the city of Tarentum by Fabius Maximus, toward the end of the second Punic war. With few exceptions these figures have been cast in molds and subsequently painted. The hair, beard, and face are in most cases colored red; the drapery white with red seams; the roses and other ornaments on the head being yellow. In some instances black hair and carefully painted eyes are recorded. There are some appearances which point to the likelihood of gilding having been employed on the hair of some of the female heads. Among the other discoveries special interest is attached to the *dioscural*, which have been hitherto but rarely found, and to the *Sileni* and Satyrs.

Encouraged by these interesting results of the explorations of 1879, Signor Colucci has been engaged since last autumn in further researches. His property extends over a portion of the site of the ancient city, and he has succeeded in bringing to light not only weapons, ornaments, and vases, but also a number of terra-cotta statuettes similar in character to the Tanagra figures discovered of late years. The specimens of this class in the Louvre are, however, said to contain certain peculiarities which point to their having been brought from their place of manufacture in ancient times to the spot where they have now been discovered. M. Lenormant (who has lately written a description of the objects which have already been alluded to as being in the Louvre) considers the torso of a young man standing erect as being one of the most valuable specimens from an artistic point of view.

Additional facts are given concerning the operations of the Cape Coast swindler or swindlers. A prominent steel-pen manufacturing house received five communications, on all of which the postage was unpaid. The first one was taken from the post-office by paying the postage, and answer was made, referring the writer to the London agents of the house. Notwithstanding this, communications continued. Subsequent to the first, the steel-pen parties engaged a new office-boy, who, not being notified, paid the postage and took the second from the post-office, but the three later ones were refused. Others in the trade have also heard from the Cape Coast parties, and the same methods have been unsuccessfully tried.

A cheap black paint or varnish for iron-work is prepared as follows: Clear solid wood tar, 10 pounds; lampblack or mineral black, 1½ pounds; oil of turpentine, 5½ quarts. The tar is first heated in a large iron pot to boiling, or nearly so, and the heat is continued for about four hours. The pot is then removed from the fire out of doors, and while still warm (not hot) the turpentine, mixed with the black, is stirred in. If the varnish is too thick to dry quickly add more turpentine. Benzine can be used instead of turpentine, but the results are not so good. Asphaltum is preferable to cheap tar.

Nature never sends a great man into the world without confiding the secret to another soul.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, December 13, 1882.

THE MONEY MARKET.—Discount rates for prime indorsed mercantile paper are 5½@7 per cent., and for second-class and single names 8@10 to 12 per cent. At the beginning of the new year the Treasury will disburse nearly seven and a half million dollars for interest on the 4 per cent. loan, besides making other large payments, all of which will be a clear gain to the money market. There has been more steadiness, and, on the whole, a better tone to the stock market. Money is comparatively cheap, and the better class of securities are down to what many regard as a safe basis, yet there is not sufficient confidence on the part of outside investors to give prices a decided upward inclination. Government and railroad bonds are firmer. Foreign exchange is firmer, with a fractional advance in rates, bills being less plenty and the demand rather better.

THE PAPER MARKET.—To expect any very active state of trade at this time would be looking for something very unusual to occur, and the present moderate business is not disappointing. The present dull outlook has combined with it reports of low water, and the latter is a sustaining influence for whatever depression the former may lend. The complaint of low water may only be temporary, and the falling off in orders for the mills at this time or during this month may only be the usual thinning out of stocks in the hands of dealers. Reports from Holyoke during the past few days indicate that some anxiety is shown lest the manufacturers may be hindered on account of a lack of water. On some of the smaller streams some mills have had to shut down altogether, while others are only running on part time.

THE STATIONERY MARKET.—There is very little change to note in business in staple goods. In the line of fancy goods trade has been confined almost entirely to retail sales and the duplication of orders given earlier in the season. Many of our wholesale stores have this week been converted into retail bazaars for the sale of holiday attractions, and some of them have had their force of employees taxed to their utmost ability to meet the varied wants of a large number of customers. There are some complaints expressed of a light holiday trade, and there is some disappointmant in consequence. Some fancy goods houses will carry over the season larger stocks than they did last year, but these are exceptional instances, as it is believed that, as a general thing, business has been much larger this season than during any other in the history of the trade. Orders continue to come in for Christmas and New Year cards in large quantities, and every dealer appears satisfied. We hear that a well-known firm is about to give up the fancy-goods branch, which it went into not very long ago, and confine itself to its legitimate business. Prices of staples hold steady and generally firm.

ROUTE!

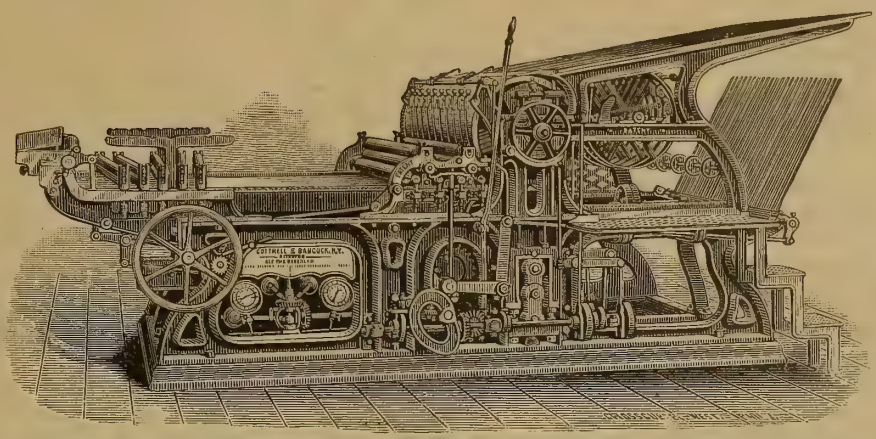
THE GREAT THROUGH ROUTE

Between the **EAST, WEST, NORTH and SOUTH.** This Great Through Route is now completed and in full operation, RUNNING THROUGH PASSENGER TRAINS DAILY as follows:

Three solid trains each way between Columbus, Indianapolis and Peoria; two trains each way between Columbus, Indianapolis and Decatur; two trains each way between Sandusky, Indianapolis, Peoria and Decatur; two trains each way between Sandusky, Dayton and Cincinnati; three trains each way between Sandusky, Springfield and Columbus; four trains each way between Columbus, Springfield, Dayton and Cincinnati; two trains each way between Columbus, Springfield, Indianapolis and Chicago—with Sleeping and Reclining Chairs on Night Trains, and elegant Parlor and Modern Day Coaches on Day Trains.

Its track is laid with HEAVY STEEL RAILS, thoroughly ballasted, with easy grades and few curves.

Traversing as it does the heart of the three great States of Ohio, Indiana and Illinois, uniting in close business relationship the capital cities of the first and second, with the second city of the third, and passing through a large number of the most important cities and towns in each, and with all its central location makes it the **Shortest and Most Desirable Route between the East and West.**



THROUGH TICKETS AND BAGGAGE CHECKS to all principal points, **NORTH, SOUTH, EAST and WEST,** can be obtained at any ticket office of the I., B. & W. R'y; also via this Route at all railroad offices throughout the country. Rates always as low as the lowest.

Don't purchase tickets to any point without first consulting the Agents of the I., B. & W. R'y.

Particular advantages offered to Western Emigrants. LAND and TOURIST TICKETS to all points eached by any line.

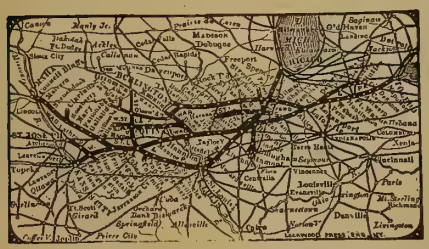
C. B. COTTRELL & CO.'S

— MANUFACTURERS OF — Lithographic, Stop-Cylinder and Two-Revolution Presses.

— MANUFACTURERS OF — Extra Heavy Drum Job and Newspaper and Country Cylinder Presses.

PRINTING PRESSES

THE above cut represents our NEW TWO-REVOLUTION PRESS The great advantages of this machine are its speed and the facility with which it can be handled for all kinds of work. In these times of Low Prices and consequently small profits, speed combined with good work is an advantage the value of which cannot be overestimated.



The above Press, for fine as well as fast work, became at once popular. The Cylinder revolves twice—first in a raised position to clear the form; the second time in contact with the form while giving the impression. The largest illustrated forms are printed at a speed of from 1,800 to 2,000 per hour, with perfect safety. Indeed, the speed is limited only by the capacity of the feeder. This Press is capable of doing the finest quality of ILLUSTRATED and COLOR WORK, and has proved to be the most economical and profitable Press yet introduced.

We have incorporated the following patented improvements: 1. Our Air-Spring and Governor, which enable the machine to run ONE-THIRD FASTER than any other Press of its class in the market. While at a speed of 1,800 per hour, and with the weight of a full form, about 4,000 pounds pressure is required at each end of the press to arrest the momentum and reverse the bed; but our Governor Attachment so completely controls the Air-Spring—increasing the pressure exactly with the increase of speed and momentum, and decreasing the same as the Press comes to a stop—that the great amount of spring required is no incumbrance or hindrance in the running of the machine, as it is with the wire-spring. When the Press comes to a stop, the Spring is thrown off automatically, so that it can be turned over the centre by hand with the greatest ease and without compressing the spring. 2. Our device for Controlling the Momentum of Cylinder, by which perfect register is insured at the highest rate of speed. This is an impossible feature on any other press. 3. Our Hinged Roller-Frame, which affords peculiar facility in handling the rollers and distributors. 4. Our Sheet Delivery without tapes, which is so easily adjusted that any variety of printed matter can be delivered to the Fly and deposited on the Pile Table without possibility of smut or blemish. For a still more rapid class of press-work, we build these Presses with TWO Form Rollers, supplied with the Table Distribution, or the Rack, Cam and Vibrator Combination, on which a speed of 2,500 per hour can be had.

Power Embossing PRESS.

THIS is a powerful and simple machine, and is complete in every respect. The power can be thrown off and a break stops the bed instantly, thereby saving any covers or expensive plates from being damaged. The press is worked by a cam and toggle: the impression is regulated by bevel-cut gears on top, and the bed platen can be run up or down by hand-wheel on left side. Our new method of using steel rods makes the press much stronger than iron cast frames. It has a movable bed; can be used for steam or gas heat; is supplied with oil cups. This Embosser is strong and large enough for all regular work in a bindery.

Space between upright rods, 17 ins. Size of head, 9½ × 13½ ins.

PRICE, $375.00.

Mrs. DORR'S LAST PRODUCTION.

"Santa Claus Souvenir."

NOT A BOOK BUT A NOVELTY FOR THE HOLIDAYS.

Something New, Rich, Neat and Novel. Each one in White Envelope; 25 in a Box.

THE reputation of the Author is sufficient to guarantee a very large sale, and Mrs. Dorr has received contributions fo the Souvenir from well-known writers, among which are Paul H. Hayne, Constantine E. Brooks, E. C. Stedman, J. J. Piatt, R. H. Stoddard, Henry R. Dorr, Mrs. Mary E. Bradley and others. The above cut gives the shape (but not the size) of front cover. Size, 9¼ × 5¼ inches. Both front and back covers are Lithographed in **Nine Bright Colors and Embossed,** so that the cut gives but very faint ideas of the beauty of this salable novelty. The inside 12 pages, printed in two colors, on tinted paper are all cut out the shape of Santa Claus. Price of this Gem only 50 cents. White Looped Silk Fringed, with Protector, 90 cents. Sample copy mailed any DEALER on receipt of price. It is not a book, but a novelty that every Stationer, Bookseller, Fancy Goods and News Dealer can sell. We can deliver large quantities in New York City. It will sell in every State in the Union for the beauty of the work, reputation of author and popular price. Liberal Discount to Dealers. Address **TUTTLE & CO., Publishers, Rutland, Vt.** BAKER, PRATT & CO., New York Agents.

THE SIZES OF BOOKS.

If we print a literary composition across one side of a sheet of paper it will form a broadside. But if that composition is made into pages, to form part of a book, the sheet must be folded. The number of folds forms one of the distinctive classifications of books.

If a sheet of paper be folded once, down the centre, it will form two leaves or four pages. A book formed of such folded sheets would be called a folio (Fo.).

A sheet folded twice forms four leaves or eight pages. A book formed of such folded sheets would be called a quarto (4to or 4o).

A sheet folded three times forms eight leaves or sixteen pages. A book formed of such folded sheets would be called an octavo (8vo or 8o).

A sheet folded four times forms sixteen leaves or thirty-two pages. A book formed of such folded sheets would be called a 32mo.

In these examples each fold has successively halved the area. But if a sheet be folded across one-third of its length, then across one-third from its edge, then in the centre like a folio—that is three times, it will form six leaves or twelve pages. A book formed of such folded sheets would be called a duodecimo (12mo). The sizes 18mo and 24mo are formed on the same principle. The 18mo has 36 pages on a sheet, the 24mo has 48 pages on a sheet.

If the reader takes a sheet of laid notepaper and folds it according to the diagrams, it will tend to impress these extremely simple matters upon his memory. In the course of doing this he will notice that the chain wire will run in a different direction in some of the sizes. Whereas in folio it is perpendicular, in quarto it will be horizontal.

It may be convenient to recapitulate the preceding information :

Form.	Leaves.	Pages.	Chain Wire.
Folio	2	4	\|
Quarto	4	8	—
Octavo	8	16	\|
16mo	16	32	—
12mo	12	24	—
18mo	18	36	\|
24mo	24	48	—

Of course, in wove paper this test does not apply. It might at first be thought that the shape or form of the book could be ascertained by measurement ; that is to say, having the dimensions of the leaf we could find out what fraction of a given sheet it formed by calculation. This, however, is not practicable. It will be seen from the table of sizes of different sheets that some papers are double the dimensions of others ; so that the quarto of one may be the exact size of the octavo of another. If the subject were worked out other perplexities would be encountered ; different sizes so closely approximating. Hence it should be distinctly understood that the word octavo, quarto, &c., applied to a book gives no indication whatever of its dimensions, unless accompanied by other information.

The ordinary sizes of books descends from folios, which are the largest, to 128mos, which are the smallest, and are rarely printed. There are, as will be seen from the above, as many leaves in the sheet as the prefix indicates ; therefore the size is generally to be inferred from the number of leaves which occur between the signatures or numbers, which are found at the foot of each page of the recto or right-hand page of a new sheet. Thus, if a book be an 8vo, the second signature will be at page 17; if a 12mo, at page 25; if a 24mo, at page 49; if a 32mo, at page 65. In English books the signatures are the letters of the alphabet, being in an 8vo B at page 17, but in American books Arabic figures are now used for the same purpose. We have said generally, because to this rule there is an exception; when the necessities of the printing office compel it to print only a half sheet at a time, these signatures occur at intervals of precisely one-half the distance we have indicated, and an 8vo is printed as a 4to, and so on. This matter, however, is easily determined by an expert, for while there are only 8 pages in a half sheet 8vo, the size is so different from a 4to that they cannot easily be confounded. A 4to volume is always broader in proportion to its length than an 8vo.—*Br. and Col. Printer and Stationer.*

The name "isanemones" has been recently applied by M. Brault to curves of equal velocity of wind, and he has made a drawing of such for the North Atlantic in summer, using for the purpose 240,000 observations on board ship. It is shown that an approximate numerical value may be attached to each of the ordinary terms used in ships' logs to denote the wind's force. M. Brault's map, which appears in *Comptes Rendus*, is remarkable in that it produces almost exactly the map of mean isobars. Thus, during summer—that is to say, when the atmosphere is most stable—over the great North Atlantic basin, the mean isanemones and the mean isobars are the same, presenting only differences that are nearly equal to possible errors of observation and of construction. It remains to be seen in what measure this important law is general. M. Brault believes it to be so for every surface of the globe which is under what he calls fundamental maxima and minima (such as the maximum and minimum of Asia, the maximum of the Azores), the fixity and permanence of which are such that they form together, and at six months' interval, two distinct systems which suffice to define the two great phases of the annual circulation.

Sponge culture in the United States is likely to present some definite results. Among the exhibits to be sent to England will be a collection of sponges due to artificial culture. The *modus operandi* is simplicity itself. A good-sized sponge is cut into fragments and attached to stones. In a certain time the sponge holds to its new base and grows. This method has been tried in the Mediterranean, but so far with indifferent success. Italian sponge fishermen were opposed to this artificial culture, and destroyed the cuttings. The growth of the sponge, as is quite natural, seems to be more rapid in tideways, because the food on which the sponge lives and thrives is conveyed to it under these conditions in larger quantities. These sponges, which McKesson & Robbins will exhibit, were grown in Key West, and in quite shallow water. For the culture of sponges, which is quite as feasible an enterprise as that of the oyster, it will be, however, necessary that some legislative enactments shall be enforced on the Floridian coasts, giving protection to those who engage in this novel business. It is not generally known that for excellence the natural sponges grown on the Florida coast are among the best in the market. Though not as delicate in structure as the Mediterranean sponges, they are much more lasting. Methods of preparing sponges seem, however, to be very crude and primitive, and there is no doubt that with more scientific methods the quality of sponges could be improved.

BOOK ILLUSTRATION, OLD AND NEW.

BY J. COMYNS CARR.*

(Continued.)

There is no merit in art in any concealment of the means by which a good effect is produced. If we are looking at steel engraving, we like to feel that the engraver has made full use of all the delicate resources at his command, and that he has denied himself no refinement or subtlety of tone which the material places within his reach. In like manner a wood-block should give us a pleasurable sensation, by reminding us of the peculiar advantages which it offers to the artist.

We like to feel not merely that the work is admirable in result, but that it has been a pleasure to the workman, and that he has enjoyed the task of accommodating his subject to the particular means at his disposal. We like to feel also, and we do feel always in the presence of any piece of masterly art, that the artist has had no unequal struggle with difficulties hard to overcome, but that he has been able, by his knowledge and practice in the craft, to bring a definite system to the treatment of the whole. In looking at a fresco, one element of fascination depends upon the fact that the texture of the wet plaster partly overpowers the surface of the color, and hinders any impression of vulgar illusion, by reminding us that it is a picture painted on a wall. In the same way it is pleasant, in a wood engraving, to feel that it is a wood engraving, and that the lines are traced by one who is familiar with the processes, and who is not afraid to adapt his subject to his material. Nor is it to be said, because there is no attempt at any striking imitative effects in texture or color, that the work is wanting in subtlety or skill. It is easy to perceive that these lines of varying thickness, through which the face of this maiden reveals itself, are cut by the hand of a master; every part of the picture has an equal degree of realism, an equal suggestion of color, and yet there is over all a prevailing sense of style and system which gives the result its preculiar charm. It would be easy to multiply examples of the modern French school, which show to what a high point of development this scientific manner of wood-cutting has been carried, and we must acknowledge, when we look to the work of the past, that this mode of wood-cutting is a new discovery, and that it undoubtedly has its origin in the work of Bewick.

I have, among several examples of modern engraving, another block, which shows how the same manner may be applied to the rendering of a work in sculpture, and I think it will be admitted that these specimens are in many respects superior and more enjoyable than the most dexterous feats of realistic interpretation. In both it will be observed that the engraver's feeling for his own art is uppermost. He has not treated the statue in such a way as to give us any idea of the accidents in the surface of marble; nor in the engraving from Granacci is there any attempt to imitate the surface of a painted panel. They both tell at a glance as wood engravings, and yet in both there is such a feeling for the subject, as makes us acknowledge that the originals have been appropriately and fairly translated. Of a second style which has prevailed since Bewick's time, viz., that which is founded upon a *facsimile* reproduction of a drawing in pen and ink, I have also brought examples, but of the style something has already been said; and I may, therefore, proceed to the third division, under which I have classed

* Lecture delivered before the Society of Arts.

modern wood engraving, and which, in the place it occupies at the present time, may be reckoned perhaps the most important of all. It was doubtless from the practice of *facsimile* wood-cutting, that the thought has occurred to modern artists that it may be possible to imitate on the wood-block other and more elaborate effects; and it has been left to the modern engravers of America to show to what a point this experiment can be carried.

You are, many of you, I have no doubt, familiar with the very delicate and elaborate cuts to be found in the pages of the principal American magazines. It cannot be truly said that the process, or rather the manner here employed, owes its origin to America, for among the Continental artists there are several instances where the same kind of result has been achieved; and I have some specimens of French engraving, which are certainly extraordinary samples of the manual dexterity which can be shown in the treatment of this class of work; but it is in America that the style to which I have referred has been followed with the greatest audacity, and, in some instances, with the greatest success. American engraving, in its latest phases, claims to be no more than a process of imitation and reproduction; and in judging of the results which it offers to us, we must put aside all earlier principles of the art. On the other hand, there is no attempt, such as we have noted in the older engravers, to fit the result to the uses of book illustration.

The association between the block and the literature which accompanies it, so far at least as appearances are concerned, is purely accidental. Of course, the engraving may explain the text, and the text may explain the beauties of the engraving, but that decorative charm which belonged to the book of an earlier time is now wholly forgotten and neglected, or is, at least, never secured. On the other hand, we must equally put aside those principles of style which may be said to have taken their origin in the work of Bewick. These blocks leave no special or peculiar character as wood engravings. At one moment we are called upon to admire the adroitness and skill with which the artist has imitated the texture of a painted tile ; at another we admire the dexterity with which he has reproduced for us the faded surface and the worn lines of one of the drawings of the old masters ; then, again, it is the brush work of a modern oil painting that he seeks to reproduce for us ; or, again, with no less skill, it is the warm tone and blurred line of a dry point etching that he transfers to his block.

I have brought with me to-night a number of specimens of these modern American wood engravings. You are, perhaps, aware that its processes have been assailed with some asperity by representatives of the more conventional school. A fierce controversy has been going on between these artists and that veteran engraver, Mr. Linton, to whom they, in turn, doubtless owe much of their instruction. Mr. Linton has no faith in the new movement; he denounces the liberty which many of the younger men allow themselves, and he regrets the recent attempts that have been made to reproduce varied effects of tone and color, and to imitate the different modes of execution in pen, brush, or charcoal, as a waste of time and a wanton perversion to skill and labor. It would take too long to follow Mr. Linton in all the details of criticism, nor is it necessary for our purpose to do so; the point which he seems to miss is that wood engraving in its modern acceptation is of a wider scope than he would seem disposed to allow. It is idle, at this time of day, to attempt to confine fine wood engraving within the limits of an original art. A process which offers such facilities in regard to reproduction must, of necessity, be employed in a vast variety of ways, and there seems to us to be no reason in the nature of things why one school of workmen should not take the course which the American engravers have followed. An experiment of this sort must be measured by its success; nor can it be gainsaid that these younger engravers of America have in this respect more than justified their departure from the accepted rule. So closely does the work accord with the original it has undertaken to imitate, that I have often heard it asserted, even by artists, that these American wood blocks are in fact not wood-blocks at all, but are mechanical reproductions of drawings or paintings. Of these mechanical reproductions I shall speak more at length in my next lecture, but although these American illustrations are genuine works of wood engraving, there would seem to be little doubt but that the efforts of their authors have been largely stimulated by the success with which various mechanical processes have lately been developed.

That a wood engraver, who has faith in his art as a dignified means of original expression, should regard with dislike the kind of dexterity which this younger school has acquired, is conceivable enough, but the truth is that these pretentions which Mr. Linton and others are now making, are of quite recent origin. In all its past history, wood engraving has been a recognized method for reproducing original work. When the propriety of *facsimile* engraving is once admitted—and *facsimile* engraving, it may be remembered, is the very earliest and worthiest form of the art—the accusations brought against the younger school will be found to lose half their force.

Their practice is nothing more than a development of a principle that has been tacitly acknowledged since the craft has been in existence, and as the earlier workmen strove to reproduce faithfully the simple lines of the design, so they now endeavor, by greater variety of method, to copy exactly the effect and color of the original drawing. The degree of success which they have attained can only be judged by reference to particular examples; but their efforts would certainly have missed success if they had allowed themselves to be hampered by the rules which Mr. Linton, and those who think with him, now seek to impose upon the art. The principle that may be said to characterize all the work of the school, springs out of a single desire to preserve the character and appearance of the work chosen for reproduction; and with this word steadily in view, the engraver permits himself to make use of devices which are often in conflict with the conventional kind of execution hitherto employed. That these devices are, in many cases, experimental, is frankly acknowledged; but no one who studies these blocks attentively can fail to perceive that such experiments have been the means of enriching the resources of the art. Now and then their endeavor to do justice to the original artist may result in a failure; but this failure is more than counterbalanced by many successes, and by the strong impress of personal individual style which the experiment has gradually developed. The engraver, it will be seen, begins to acquire and to practise a system of his own, by which he is enabled to infuse into his work a new sense of variety, and to claim for it a kind of attention and interest, such as could never be allotted to the strictest adherence to a rigid rule of procedure; and it may be said, further, that in the hands of the most gifted of these American engravers, a sense of style is gradually asserting its control over the newly acquired methods.

I may point, in particular, to the work of Mr. Cole, as it is shown in the pages of *Scribner's Monthly Magazine*. The block, for instance, in which he has reproduced the noble picture of "The Sower," is executed in a manner that has nothing discordant with the principle that Bewick established. Where the simple line can be used, as, for example, in the treatment of the sky, the artist has shown his willingness to adopt that mode of treatment; and although the whole effect of the block is delicate and refined, there is an admirable economy of method in the way in which the dark sombre figure is relieved against the dark hill-side.

These essays of the American engravers present, as I have said, nothing that is antagonistic in principle to the practice of Bewick. Their method is founded, like his, rather upon the rendering of mass than upon severe definition of line, and the differences between the two are differences of detail. And yet these differences, it must be allowed, are not unimportant. Though Bewick, in his admirable cuts of British birds, did not insist upon outline, he always adopted a regular and uniform system of execution. He worked with line, even while he was endeavoring to secure effect of tint ; and it will be seen that although he makes use of the black surface of the block where he can give the sense of dark color, yet the lighter tints are always produced by delicately-cut lines which have a rhythmical and regular direction. The majority of the American engravers do not confine themselves to this method. If they want to relieve or lighten a dark surface, they as often as not pick out the lights in small irregular holes. They stipple, so to speak, with the point of the graver, and there work has, for this reason, more of the appearance of accident and less of the method of art. And it must be said further that they are greatly assisted by the mechanical appliances of printing which were not within Bewick's reach. The printing of wood-blocks in America is itself an art, and much of the beauty of the wood engravings depends upon its exercise.

I have now traced, very briefly I know, and very inadequately, the history of wood engraving since its first appearance in the fifteenth century, and it may be worth while to summarize the direction of its progress, and to note how far its modern developments have fitted it for the particular conditions of illustrations, which it is chiefly called upon to discharge. In the beginning, as we have seen, the wood engraver was an engraver in *facsimile;* he sought to express original designs executed by artists who were constantly mindful of the limited resources of his art, and the particular conditions under which their work was to be associated with printed books.

As the effects within the reach of the wood engraver became gradually more complicated, the professors of the craft were overtaken by a desire to compete with engravers on metal; and no sooner was this competition fully established, than the use of metal plates for book illustration resulted in the final overthrow of the wood engraver's art. In its revived form, as we have seen, wood engraving took a new departure.

The man to whom its revival is chiefly due was not only a skillful draughtsman but an original artist of power, and he, therefore, began to use the wood-block, not with any special reference to its place in a printed book, but rather as one artist might use the copperplate, merely as the material for expressing his own inventions. Thus it happens, that in spite of the beauty of Bewick's designs, they have no special charm in connec-

tion with the subject we are discussing; they have led to the discovery of new resources in the art itself, but they have not provided us with any adequate substitute for those simpler blocks which adorn the books of an earlier time. In the hands of later artists, who have made use of Bewick's discovery, wood engraving may be said to have reached its farthest limits of development. It is difficult to conceive that in pure engraving we can get better results than are to be found in such a block as that of Pannemaker, which you have seen to-night; and it is impossible to believe that, as a means of imitation, it can be carried much farther than the point already reached by the engravers of America; but all this development has not greatly helped to give greater beauty to printed books; and now that the whole scope of the art has been shown, and that all possible discoveries have been made in all the technical departments of the art, it may be worth considering whether the time has not arrived, as a matter of taste and beauty, to revert to that earlier style, which I discussed last Monday. This I think, at least, is certain, that, unless the wood engraver and the artist who works for him are willing to labor in this direction, he will before long be ousted altogether by the many mechanical processes dependent upon photography which are used for the purposes of illustration. The discussion of these processes, and of their use to printed books, I shall reserve for my next lecture.

(To be Continued.)

A BUSINESS OPENING.

A man with some experience in the **Book, Stationery and Fancy Goods Trade,** with $20,000 to $50,000 to invest, can form a connection with an old established house doing a business of $250,000 a year, in a thriving business centre in the West. The business can be doubled with additional capital. Address, with references, J. M., office American Stationer.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot. Each sheet is water-marked with name and date.**

Correspondence.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., December 18, 1882.

Such a day as this has been in the shops on Fourth street, on Walnut and Vine streets, on Central avenue, Fifth street and all of the streets "over the Rhine," and in fact in the suburbs—such a day as this has been is a joy to the trade. Everybody is busy. Stocks are brilliant and people are fastidious. Purchases are liberal as to quantity of goods taken. In this respect the taste runs to goods of the best quality in respect to taste and workmanship and of medium price. Very little call is made for glittering extravagance. Very costly goods, in which their costliness is their leading characteristic, are in small request. Beauty in construction as well as beauty of texture and outline, are essential to satisfy the local taste in the selection of toilet notions and the like. All of the "stores" and "shops" are keeping late hours, and will continue to do so all this week. Everybody is busy.

Clerks at Robt. Clark & Co.'s all looked as neat as the shop they are in, and appeared not to walk, but to glide about with a look of cheerful weariness on their faces. It was a sense of the everlasting operation of that eternal law of compensation, which, no doubt, keeps them up. Every show-case there was turned inside out, and the counters were covered with beautiful things. Men and women, full-grown, their faces lighted with enthusiasm, were poring thoughtfully over the treasures. But there were children there, too, their glowing hearts flushing their bright countenances, and they, too, were studying pleasing surprises for some one they love. It is really a sort of spiritual tonic—this atmosphere made tremulous and cheery by heart-beats and heart warmth. How it does contrast with the air of selfish traffic in the Chamber of Commerce immediately adjacent. The work that has been done for childhood, the art lavished on it, the money lavished out for it by rich and poor is a confutation of the croak that this age is degenerating in respect to its estimation of domestic delights. In at Clark's there are ten articles for a child to one for an adult, and among those for adults ten for women to one for men; and these, remember, are for the anniversary of the birth of the Christ-child, with whose advent came hand-in-hand to this earth tenderness to childhood and to old age, and respect for womanhood. No more inquests over a new-born baby to determine whether it shall be suffered to live or must be thrown to the wild beasts of the mountains or the fishes of the sea. And nearly nineteen centuries' growth of this new-born humanity we see illustrated to-day nowhere more than in the book and picture and fancy stationery shops. In such places is repeated—in spirit if not audibly—the angels' birth-song of the Bethlehem babe. Nowhere could an artist select better study faces for exhibiting the whole gamut of gentle and noble emotions.

Pounsford & Co. have a rich line of fancy holiday stationery goods and are busy as a hive of bees, and their shop is full of eager customers. Geo. Stevens has a shop full of clerks and crowded with customers. His Christmas trade will certainly be immense.

Peter Thomson is full of business at his Vine street shop at the entrance of the Arcade.

Barton, in the Arcade, is up to his eyes in business in the upper grades of art prints and of art pottery. Every artist in the city knows him, and this class, professional and amateurs, are his chief customers.

John Holland for two months has been working his force day and night (till ten o'clock) to meet calls upon him for goods. He can give more skilled labor employment. He is educating here as rapidly as he can. A singular circumstance is that out of ten boys who commence this kind of work only about two are retained at the end of three months. The eight are found, as a rule, incapable of acquiring the necessary skill. Holland's main energies are directed to the production of pens just now. His holiday sales have been immense.

In business stationery the work this fall has been immense. J. R. Mills & Co. have a formidable lot of ledgers corded up in their show-windows, all sold, and this is only a small part of the quantity in the same fix in their establishment.

W. B. Carpenter & Co. are so busy, that Carpenter hasn't time to be jolly, and that is saying a great deal. Stewart & Co., Louis Snider's Sons, Snider & Hoole, Van Antwerp, Bragg & Co., are all doing splendidly in their immense way. They are delighted with the year's business results; they are so much better than their best anticipations. Woodrow, Bradley, Mullary & Webb, Wilstach & Baldwin, J. R. Hawley, Perry & Morton—in fact, all of them are so busy now that they will be glad when the holiday trade is over. The weather is just right—cold enough, not too cold, for holiday trade. Money is fairly easy and general trade is good.

PRINCE WILLIAM.

BOOK ILLUSTRATION, OLD AND NEW.

BY J. COMYNS CARR.*

(Continued.)

Having traced the progress of wood engraving in its latest and most extreme development, it becomes our task to consider those various mechanical processes that now place themselves in competition with the engraver's art. That these processes should already occupy an important place as a means of book illustration is scarcely remarkable, seeing that they can be employed at a cost very much lower than is required even for the commonest and coarsest wood-blocks. That they do not yet display an equal refinement and perfection in the rendering of an artist's work, must indeed be allowed, and there is still a certain superiority possessed by the wood-block which had not been attained by any of the mechanical processes; but that this superiority will be preserved, it would, I think, be rash to assert. Within the last few years, nearly all these different processes have been developed with remarkable rapidity and success, and I believe it probable that, before long, results will be obtained such as even the most delicate wood-block cannot rival. All these processes have been the outcome of the invention of photography. For some time there was a disposition to use direct photography for book illustration, never, I think, with very fortunate effect. The appearance of a photograph has absolutely nothing in common with that of printed text, and it is impossible to combine the two so as to produce a satisfactory or harmonious result. Direct photography, then, as a means of book illustration, scarcely deserves consideration; but although a volume adorned with photographs can never be a very lovely object, the attempt to make use of photography for this purpose has led to valuable discoveries which have been fruitful in other directions. Perhaps the most important of all these discoveries was that by which the photographer was enabled to obtain, from the negative, a print that should be permanent and indestructible.

The carbon print never exhibits all the refinement and delicacy which belongs to the silver print; but the fact that it is indestructible, and that it may be produced in any tint or color that is desired, gives it a special value of its own. You are no doubt familiar with the marvelous reproductions of drawings by the old masters which have been made by Mr. Braun, of Dornach, and which are printed by the carbon processes. When you have no original at hand, it is difficult sometimes to believe that the

* Lecture delivered before the Society of Arts.

photograph itself is not the drawing, and it would certainly be impossible to find any means more suitable for the reproduction of this particular class of work. This carbon process is constantly employed in the illustration of books under less advantageous conditions. A way has been discovered of multiplying the carbon prints mechanically, and, in certain instances, the results obtained are sufficiently good; but, as a rule, this process gives but a poor and lifeless copy of any work of real art. If the original drawing be in line, the lines as they reappear in the print lose much of their force and vigor, and in all cases the surface of the print has a dull and lifeless appearance, and much of the refinement of tone which may be secured in the original negative is altogether lost.

I shall not, however, attempt to compare or to discuss the different modes of producing these photographic prints. I have referred to the carbon process because it really forms the basis of one of the most interesting and admirable of the many modes of photographic engraving. Hitherto, in speaking of book illustration, I have limited myself to the art of the wood engraver, but as these mechanical processes are equally applicable either to printing in relief or in intaglio, I shall bring to notice specimens in both kinds, and briefly explain the means by which they are produced. Perhaps the very finest examples of mechanical engraving are those which bear the name of Mons. Amand-Durand, of Paris. The reproductions which he has published of the works of Dürer, and Mantegna, and of other of the earlier masters of engraving, are of unapproachable beauty and excellence. I have heard Mr. Reid, the accomplished and learned keeper of prints and drawings at the British Museum, declare that it is almost impossible, in some instances, to distinguish between the copy and the original, and certainly to those who cannot possess the originals these plates of Mons. Amand-Durand offer a delightful substitute. Of the manner in which they are produceed I cannot speak with any authority. That it is based upon photography is of course certain, and it is mainly, though not wholly, mechanical in its operation. Mons. Amand-Durand is a skillful engraver on metal, as well as the inventor of this wonderful process, and there is no doubt that he supplies, with his own hand, any deficiency that may exist in the plate as first produced. But although these plates are certainly the most perfect of their kind, they deal, for the most part, with only a special class of work. As a general rule, Mons. Amand-Durand limits himself to the imitation of engravings in line, and he has not, save in a few instances, tried to reproduce the effect of a chalk drawing or of a drawing in wash. In this sense, therefore, the process employed by M. Goupil, has a wider scope, and this has its English counterpart in the invention of a similar kind made by Mr. Henry Dawson. One of the very first set of plates produced by Mr. Dawson, after his invention had been perfected, consisted of a series of copies from drawings by the old masters, which are published in the catalogue of the Grosvenor Gallery. Mr. Dawson, makes no great secret of the principal on which his process is founded, and I may therefore briefly explain the ingenious mode in which this admirable result is obtained. In the first place these are impressions from metal plates, printed in the same manner and by the same press, as a copper or steel engraving, but instead of the picture being engraved upon the plate, as one might expect, the plates are, themselves, so to speak, produced upon the picture. It is the picture, in Mr. Dawson's process, which really creates the plate; and the way in which this is accomplished is so remarkable that perhaps I may give a few words of explanation. The first thing that Mr. Dawson does, after having photographed his subject, is to take from his negative a carbon print; this print is taken, not on paper, but on glass; and as the principle of a carbon print consists in the deposit of solid pigment, the picture so taken upon the glass represents a very delicate work in relief; that is to say, the surface of the picture is very slightly raised upon the smooth surface of the glass. This impression is then covered with a thin coating of gold, which acts as a powerful conductor of copper, and the glass is now placed in a galvanic bath, where the copper is gradually deposited over the whole of the plate. When the deposited copper has attained a sufficient thickness, it is taken from the bath, and the glass is removed. We then have a copper plate with the picture cut upon its surface, exactly corresponding to the carbon print; that is to say, those portions which in the print were in relief, are now in intaglio, and every delicate gradation is exactly reproduced as in the original negative. The copper-plate now resembles, in every respect, the work produced by the engraver. According to the character of the original, it partakes of the nature either of an engraving in line, or of a mezzotint engraving, and it is this quality of mezzotint surface which Mr. Dawson rightly regards as constituting the special claim of his invention. The difficulty here with which he had to contend was to give such a surface as would hold the ink, and this he has now accomplished in a very remarkable degree. A certain amount of hand-work must occasionally be added, in order to correct the defects of the photograph, which sometimes gives undue force to the delicate portions of the original drawing; but broadly speaking, the process is purely and wholly mechanical, and the copper-plate, as we have seen, is absolutely grown upon the raised print. There is scarcely any kind of original work to which this process may not be applied with success. In the reproduction of a drawing in pen and ink, the result resembles a strongly bitten etching. It is equally successful in imitating the effect of a drawing washed with a brush, or of a drawing in chalk; but as deposited copper is always more or less soft in substance, the plate, before it is used by the printer, is covered with a thin film of steel, and we have then a surface which is practically indestructible, and from which any number of impressions can be taken, for so soon as this thin film of steel shows signs of wear, the printer stops his labor, and the steeling is renewed. This process of steeling a plate is now very generally applied to engraved work on copper, and its effect is practically to abolish the distinction which once existed between proofs and prints. The value of a proof in former times consisted in the fact that it gave an impression of the plate in its full strength, before it had become worn by successive printings; but now there is in reality no limit to the number of impressions which can be taken from the steel plate, nor is there, as is sometimes supposed, any loss of the most delicate workmanship by the process of steeling. Indeed, Mr. Rajon, the well-known etcher, told me once that, for his own part, he almost preferred an impression taken after the plate had been steeled. Mr. Dawson's invention, which I have been describing, cannot, of course, rank among the more economical modes of book illustration. Copper-plate printing must always be costly, and by its nature it is unfitted for incorporation in printed text, but for the more expensive and luxurious sorts of book illustration it offers remarkable advantages, and it is especially valuable as a mode of reproducing, with absolute fidelity, the earlier forms of art. A process similar in kind, and evidently based upon the same principles, has been perfected in Paris by Mons. Dujardin; and in the *Gazette des Beaux Arts* may be seen some very remarkable specimens of the work he produces. In certain cases, the process enables us to do away altogether with the intermediate services of the draughtsman. Furniture, armor, or objects of vertu, may be reproduced directly, and with absolute fidelity and refinement; indeed, the result is, in some respects, more subtle than can be shown even by the most minute and careful engraving. No handiwork could preserve, with equal success, the appearance and surface of an embossed shield, or of a carved cabinet.

[To be Continued.]

COPYING PAPER.

The following is communicated to a German scientific journal by E. Dieterich, in regard to the method he employs for making the copying paper which has obtained so good a reputation n Germany. The manufacture may be divided into two parts, viz., the production of the color and the application of the same to the paper. For blue paper, Dieterich uses exclusively the blue color known as "Paris blue," as covering better than any other mineral color. Ten kilogs. of this color are coarsely powdered and mixed with 20 kilogs. of ordinary olive oil; 0.25 kilog. of glycerine is then added. This mixture is, for a week, exposed in a drying room to a temperature of 40° to 50° Centigrade, and then ground as fine as possible in a paint mill. The glycerine softens the hard paint, and tends to make it more easily diffusible. Then Dieterich melted 0.5 kilog. of yellow wax with 7.5 kilogs. of ligroine, and added to this 3 kilogs. of the blue mixture, mixing slowly at a temperature of 30° or 40° Centigrade. The mass is now of the consistence of honey. It is applied to the paper with a coarse brush, and afterward evenly divided and polished with a badger's-hair brush. The sheets are then dried on a table heated by steam. This is done in a few minutes, and the paper is then ready for shipment. The quantities mentioned will be sufficient for about 1,000 sheets of 50 by 90 centimeters, being a day's work for two girls. For black paper, aniline black is used in the same proportion. The operation must be carried on in well-ventilated rooms protected from fire, on account of the combustibility of the material and the narcotic effects of the ligroine. The paper is used between two sheets of paper, the upper one receiving the original, the lower one the copy.

EARLY REFERENCE TO STEEL PENS.—Steel pens are generally held to be a modern invention of recent date. This seems, however, to be a mistake, as appears from the following reference to them in "A Journey to Paris, in the year 1698, by Dr. Martin Lister," London, printed for Jacob Tonson, &c., 1690, where the author says: "There is one thing very curious, and that was an ancient *Writing Instrument* of thick and strong silver wire, wound up like a hollow Bottom or Screw; with both ends pointing one way, and at a distance; so that a man might easily put his Fore-Finger between the two Points, and the Screw fills the Ball of his Hand. One of the points was the point of a bodkin, which was to write on Waxed Tables; the other Point was made very Artificially, like the Head and upper Beak of a Cock, and the Point divided in two, just like our *Steel Pens.*"—*Printing Times and Lithographer.*

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President. **DALTON, MASS., U. S. A.** JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show.

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS

LINEN LEDGER PAPER

Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

Being **Triple Sized** (a process entirely our own) and **Loft Dried,** can be erased and written upon the fifth time distinctly. None genuine without the water-mark, thus—**Old Berkshire Mills Linen Ledger,** and date.

CARSON & BROWN CO., Manufacturers.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U.S.A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

SUPERFINE QUALITY.

In handsome Light Blue Boxes containing one-quarter of a ream of Note Paper each, and bearing in blue letters description of contents.

In separate Boxes of uniform size, are one-eighth of a thousand Envelopes corresponding in tint and quality to the paper.

EXTRA SUPERFINE QUALITY.

In attractive Lavender Colored Boxes containing one-quarter ream of Extra Fine Paper each, with contents printed in red. Corresponding to this, in like Boxes, are Envelopes to match.

All this Stationery may be relied on to be according to representation It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., *79 Beekman Street.*

L. PRANG & CO'S

PRICE LISTS OF OUR VALENTINES ARE NOW READY.

PRICE LISTS OF OUR VALENTINES ARE NOW READY.

1883 VALENTINES 1883

WE hereby beg leave to announce to the Trade the completion of our line of Valentines for 1883, in the preparation of which we have put forward our best energies to keep up to the increasing demand for artistic goods. As a proof of our endeavors in this direction we would mention the following artists as contributors to our line for this year:

MISS FIDELIA BRIDGES,	MISS L. B. COMINS,	WALTER SATTERLEE,
MISS L. B. HUMPHREY,	MISS ROSE MUELLER,	JEAN AUBERT,
MRS. O. E. WHITNEY,	F. S. CHURCH,	Of Paris, etc.

Same as last season, we furnish our Valentines plain, and also single and double, with silk fringe. All fringed cards are provided with protectors and envelopes to insure safe transmission through the mails.

Envelopes are furnished, **without extra charge,** for all cards costing $1.80 per set and over.

Attention is called to the **elegantly designed backs**, **a special feature of our cards,** adding greatly to the artistic value of the same.

Our assortment of plain cards ranges in price from 35 cents per set to $6 per set, and of fringed cards, from $1.60 to $12 per set.

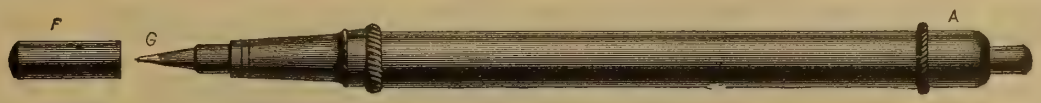
Special attention is called to the **AUBERT VALENTINE** (so named after the eminent French artist Aubert, who designed the picture of the lovely girl contained therein.)

A large folding card with a wreath of flowers, printed on satin, and designed by Miss F. Bridges; facing this is the design by Aubert. The card is heavily fringed with silk, has a leatherette protector, and each card is encased in a neat box. Price, each, $5.

Of all Valentines costing $3 per Set and over, we are ready to break sets, if so desired.

REGULAR DISCOUNTS TO THE TRADE FROM ABOVE PRICES.

Besides the above attention is called to our **New Birthday Cards** and **Artistic Plaques** and other **Art Publications.**



OUR LINE OF EASTER CARDS WILL SHORTLY BE ANNOUNCED.

THE LIVERMORE STYLOGRAPHIC PEN.

(Full Size.)
Patented January 4, 1881.

Endorsed unanimously by the Trade as giving perfect satisfaction to their customers. Many say "It is the only Stylographic Pen worth having at any price." More of these goods are sold and used than of all others combined. They always command a ready sale; try them.

(Closed.)

(Open.)

Our New Pen, "THE MONARCH," has the reverse case—closing up short for the vest pocket—holds a large quantity of ink and is made very strong and substantial.

LIVERMORE'S STYLOGRAPHIC LEAD PENCIL.

(Full Size.)
U. S. Patent, September 13, 1881, also patented in foreign countries.

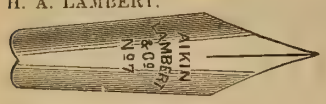
This Pencil is the greatest novelty of the season; contains valuable features never before combined in any lead pencil. It sets the lead automatically, ready for use, and by a single motion the lead is retired within the case after using. It is the most substantial Pencil ever produced, is handsomely made with Hard Rubber Case, Nickel or Gold-Plated Trimmings, as desired. It sells at sight.

The demand for the above goods is constantly increasing, due entirely to their superiority over all others. They are made by the Stylographic Pen Co., of Providence, R. I., who own and run the Largest Factory in the World devoted entirely to this class of goods.

STYLOGRAPHIC INKS,

Especially adapted for Stylographic Pens,

IN COLORS, BLACK AND COPYING.



Now in use in over Half a Million Stylographic Pens, and unexcelled for general use.

JOHN HOLLAND, Patentee and Manufacturer of Gold Pens, Pencil Cases, Fine Pen Holders, &c., **No. 19 West Fourth St., CINCINNATI, Ohio.**

1882. # PAPER HANGINGS. 1883.

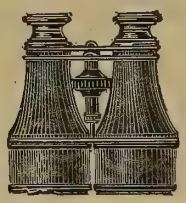
By way of Customary Annual to the Trade, we beg to submit that the Samples now in our Agents' hands for Fall and Spring have been selected with most scrupulous care, and after an exhaustive examination of **All New Designs** cut by Standard Factories for the season's distribution.

We claim for the product a far **Higher Degree of Excellence** than heretofore compassed by any individual House, approximating, as closely as possible, a **Perfect Assortment.** Prices being equal, the comparative merit of those lines submitted to your notice will doubtless, to a great extent, control selection.

We challenge and respectfully solicit direct comparison of our collection with those of any other Houses representing that branch of artistic industry which is our **Exclusive Specialty.**

The untiring effort of over thirty years, which has resulted in our sales being the largest recorded for the past two seasons, has also given us an intimate knowledge of the wants of that widely extended trade to which we cater. This fact, coupled with unvarying promptness and watchful care of our customers' interests, will, we feel assured, secure for us a continuance of your esteemed patronage.

Our Agent will indicate, by direct correspondence, the date of his visit. Failing receipt of such advice, Samples shall be forwarded, free of expense, upon receipt of request.



Very truly yours,

JOHN J. McGRATH,

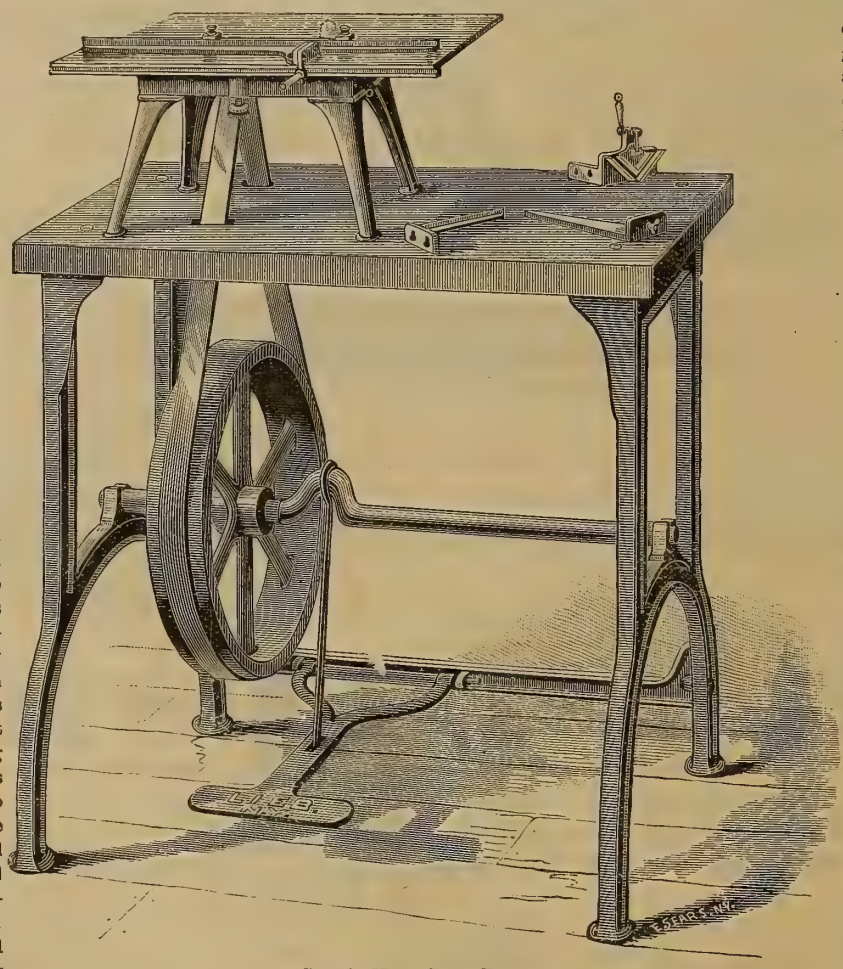
Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW SAW TABLE.

The saw table illustrated by the accompanying engraving was designed by Charles A. Lieb, 23 Vandewater street, New York. It is intended for use in type foundries, to cut brass rules and other metal work incidentally connected with type founding; also for ripping sheet metals in manufacturing electrical apparatus.

Since this table was designed it has been introduced into the Western States, where type foundries are not so numerous as they are in some of our large cities. It was the former custom to send brass rules to a type foundry to get them cut to the right length, or mitred, but with one of the saw tables here shown any printer can do all cutting and mitring of his rules without the delay and expense of sending his work to the foundry. This machine is simple in construction, consisting of a pair of cast-iron legs, with a bench of solid mahogany bolted fast to the top. Upon this bench is placed a smaller one of cast-iron, which forms the saw table proper. The cast-iron plate forming the table is hinged at the back, so that it can be tipped back, exposing the saw and mandrel, thus enabling the operator to readily change the saw. The saw mandrel is of hardened steel, having a single journal ground to a shape corresponding to the anti-friction curve. Each saw is securely attached to a cast-iron thimble, having a taper hole to fit the end of the mandrel, being held in place by a nut. This is a notable feature, as the saw must run perfectly true, otherwise the work produced will be of an inferior quality. By attaching the saw securely to the cast-iron thimble, then placing it upon a mandrel and truing it up at the sides with an emery wheel, the operator can always rest assured that the saw, when placed upon the mandrel, will run true. In grinding, the saw is made thickest at the edge, so that it will not pinch. Saws used in the ordinary way will not only run out at the periphery, but are sure to wabble. The projecting end of the mandrel opposite the saw has a device attached for adjusting the saw accurately for special work, as in cutting mitres.



A round bar or guide is shown at the front edge of the table, to be used as a support for gauges used in executing various kinds of work. It will be observed that the top of the table is free from slots and holes to catch chips and small particles of metal, which would seriously affect the accuracy of the gauges. In cutting rules and in mitring, lines would not be sufficiently accurate, and gauges have to be used instead to insure the cutting of pieces of metal to standard sizes and lengths.

In cutting rules to standard lengths by the old method, the saw had to be stopped to test the accuracy of the work. With this machine, before starting, the standard gauge is placed with one end against the saw, while the slide gauge, shown at the left, is set to touch the end of the standard gauge. The right-hand slide gauge is then set to just admit the standard between them.

In cutting up rules to exact lengths, their accuracy may be tested between the slide gauges, without stopping the saw, at a sacrifice of time, whenever a measurement is to be made. An extension gauge for cutting extra long rules goes with this machine. The height of the saw table is regulated by a screw underneath, at the front. A long gauge is provided for ripping out long pieces from a sheet of metal, while another gauge is furnished for cutting off at all required lengths. For notching rules, by taking a number of cuts with the saw the requisite quantity of metal may be readily removed, leaving an opening of the required size.

The mitre box is a peculiarly valuable adjunct to this machine, as the rules are cut to the exact length required at first, after which they are placed in the mitre box and the ends mitred by cutting them up to an edge. By the old method the rules were cut longer than required, and in mitring they were cut to the necessary length, thus wasting considerable material, and the work was not always entirely satisfactory.

The mitre box here shown will mitre either right or left hand equally well. These saw tables may be run by power or by foot, and the upper portion may, when desired, be separated from the lower portion and mounted upon a bench.

Lieb's New Saw Table.

NEW PATENTS.

No. 267,690. Type-Case Cabinet.—John S. Hoerner, Highland, Ill.

A type-case cabinet having inclined cases, capable of being drawn out and being held from tilting by means of side pieces on the cases and strips secured to the back and front of the cabinet.

No. 267,713. Glass for Decorative Purposes.—Herbert H. D. Peirce, New York, N. Y.

As an article for mosaic or other decorative work, glass rendered opalescent and silvered upon its inner or under surface so that light is reflected through the glass.

TESTIMONY OF LIEUT.-GOV. BYRON WESTON.

I witnessed the test made by your Superintendent of the fire-proof qualities of an express chest and bond and note case manufactured by the Magneso-Calcite Fire-Proof Company, at Nantasket Beach, on Friday last. After being embedded in coals for one and one-half hours, the contents of the express chest, consisting of papers, greenbacks and lucifer matches, were found to be in perfect condition, there being nothing to indicate that they had been near a fire except a slight smell of smoke. Upon opening the small bond and note case, its contents were found to be in equally as good condition as those of the express chest, although it had been exposed to a severe test for more than half an hour. There can be no question but that the material used by your company is perfectly fire-proof.

DALTON, MASS., August 30, 1881. Yours truly, (Signed) BYRON WESTON.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

C. H. N. Mason, paper dealer, Norfolk, Va., has made an asignment.

R. M. Bailey, publisher of the *Register*, Middlebury, Vt., has sold out.

Creswell & French, publishers of the *Post*, Grand Rapids, Mich., have sold out.

Thomas Royal, bookseller and stationer, Louisville, Ky., is selling out at auction.

George W. Harlan & Co., book publishers, New York city, have made an assignment.

J. H. Wright & Co., bookbinders, Allentown, Pa., have been succeeded by Wright & Keiser.

Henry Lawson, publisher of the *Patriot*, Charlottetown, P. E. I., has sold out to David Laird.

Goedkoop, De Wilde & Co., dealers in fancy goods, Paterson, N. J., have dissolved partnership.

McCurdy & Milroy, stationers, &c., Michigamme, Mich., have dissolved partnership. Alexander McCurdy succeeds.

The style of the firm of J. C. Morgan, strawboard manufacturer, Battle Creek, Mich., has been changed to Morgan & Lowell.

Francis & Loutrel have a varied line of "daily journals," pocket diaries, almanacs, calendars, &c., which deserve the attention of the trade.

The Nonotuck Silk Company has issued a hand-book, No. 4, of patterns, and instructions for knitting useful and fancy articles, from the Florence knitting silk. It is a convenient and interesting pamphlet.

Callaghan & Co., booksellers and stationers, Chicago, Ill., have dissolved partnership, A. P. Callaghan retiring. A new firm has been formed by the admission of J. E. Callaghan, under the same style.

George Scherer, bookseller and stationer, St. Louis, has lately removed to the Northwest corner of Fifth and Pine streets, where he has one of the finest stores to be found, and which is said to be the largest of its kind in that city.

The Acme Stationery & Paper Company is offering a limited number of the valentine poem, "My Love," published by it last season. This valentine is illustrated in sixteen colors. Orders should be sent in early. Discounts will be given on application.

Janentzky & Co., Philadelphia, have added to their already very complete stock of artists' materials some very charming plaques in papier-maché. The bottoms of these plaques are ornamented with beveled mirrors, having gold borders. These goods come in three different colors—ebony, light blue and light pink, and in sizes 8½, 10, 12, 14 and 16 inches. Papier-maché plaques are preferable to wood, because they offer a smoother surface and will not warp. The palette mirrors, manufactured by the same house, have had a great success, and are mounted in ebony and maple, coming in sizes 10 by 14 inches; the mirrors are diamond-shaped, 4 inches in surface. Janentzky & Co. have also just received a new assortment of Barbotine vases for decoration, which are all of novel forms and which are ornamented with flowers in relief, modeled by hand.

Henry A. Schmook was found dead in the room where he lodged at No. 461 Ninth avenue, about six o'clock on Tuesday morning. His death reveals another story of domestic unhappiness and possible suicide. Mr. Schmook was about thirty years old, and he had been employed for fifteen years in John Gibbons' lithographic establishment at No. 82 Beekman street, much of the time as a traveling agent, up to about July 1 last. Three years ago he married a girl of twenty. They lived unhappily together. He accused her of drinking to excess, and their frequent quarrels led to a separation, which occurred last July. This estrangement from his wife was a serious blow to Mr. Schmook. He was a man of a highly nervous temperament, and his trouble drove away sleep. His friends suggested a change of climate, and he went to San Francisco. New scenes and new associations benefited him little, and he resorted to drugs to procure rest. Three months later (last September) he returned to this city and engaged a room in the house of his brother-in-law, at the address given above, and resumed his connection with his old employers. He beseeched his wife to bury their differences and begin life anew, but she was inexorable, and his despondency increased. He continued the use of anæsthetics, taking the drugs in larger quantities, as his nervous system grew lower through sleeplessness. On Monday he went home earlier than usual, and said to his sister-in-law, "I am very tired, and hope I shall be able to sleep to-night." He was not seen again alive. On a table beside his bed there was found three bottles, with a very small quantity of colorless liquid in each. His friends say that he may have thoughtlessly taken an overdose of the medicines, or that he swallowed a large quantity purposely to end existence. He was well and favorably known. His funeral takes place from his late residence at 1 o'clock to-day.

The holiday number of *Wide Awake*, published by D. Lothrop & Co., is handsomely printed and illustrated, making a very attractive magazine for juvenile readers. The ame firm has also issued a holiday number of "Babyland," which is said to be the only magazine in the world made expressly for babies. It is filled with short stories and finely printed pictures.

The Merriam Manufacturing Company, Durham, Conn., has got out a new line of tin japanned paper cutters of improved finish with a neat border thereon. These are very nice goods, and the company will put on them the business card of any firm ordering gross lots, without additional cost, except the expense of the name-block.

Aikin, Lambert & Co. have had a season of unparalleled activity. Orders have come upon them so thick and fast that they have been compelled to decline many which could not wait until after the holidays.

McLoughlin Brothers' new catalogue of valentines, will be ready by January 1, and it will be forwarded to the trade without delay.

T. E. Doughty, bookseller and stationer, East Saginaw, Mich., has changed the style of his firm to Thomas E. Doughty & Co.

The Cedar Falls Paper Company, Cedar Falls, Iowa, has been succeeded by the Cedar Falls Paper Manufacturing Company.

Levy Brothers, wholesale and retail booksellers and stationers, Madison, Ind., have advertised to sell out.

W. W. Watkins, Cazenovia, N. Y., has put out a very neat card announcing his Christmas novelties, &c.

F. A. Capwell, printer, Rochester, N. Y., is dead.

H. C. Ford, publis er, West Side, Iowa, has sold out.

J. F. Merrill, printer, Hickory, N. C., has been burnt out.

H. M. Green, printer, Utica, N. Y., has made an assignment.

E. J. Edward, publisher, Visalia, Cal., has sold out to R. F. Eagle.

O'Neil & Brother, stationers, Beaumont, Tex., have sold out to F. M. Corley.

Mrs. Anderson, dealer in fancy goods, Bowmanville, Ont., has been burnt out.

J. & J. Barr, publishers of the *Record*, Windsor, Ont., have been partly burnt out.

Davisson, Hall & Co., dealers in fancy goods, San Francisco, Cal., have dissolved partnership.

W. L. Heyser, agent, manufacturer of straw board, Chambersburg, Pa., is reported to have failed.

Henry Levy & Son have just received a few choice articles suitable for Christmas and New Year gifts.

McCaughley & Wikidal, dealers in fancy goods, Cincinnati, Ohio, have called a meeting of creditors.

H. F. Freeze & Co., fancy-goods dealers, San Francisco, Cal., have dissolved partnership, Mr. Spitz retiring.

E. & H. T. Anthony & Co. have in course of preparation some very fine instantaneous views of scenes on Broadway.

The National Papeterie Company, Springfield, Mass., has dissolved partnership, and a new firm has been formed under the same style.

Fire broke out in the printing establishment of Stratton & Co., 66 Pearl street, New York, on Tuesday evening, causing a loss of $2,000.

The Derrickson Card Works have a new price list and sample sheet of New Year calling cards and of orders of dance, advertising cards, &c.

C. H. N. Mason, paper and bags, Norfolk, Va., has assigned to secured claims for $7,732. The stock and accounts are estimated at about $7,000; exemptions $2,000.

J. L. Shoemaker & Co., Philadelphia, have issued a tinted and colored card calendar for 1883. The calendar is made to hang from the hook of the patent suspension tag or card which is so great a success.

Wright & Keiser, successors to J. H. Wright & Co., Allentown, Pa., will remove to 831 Hamilton street on January 1, where their facilities for printing and carrying on the stationery trade will be much improved.

The Japanese prince, Arisugawa, placed a large order with E. & H. T. Anthony & Co., on Monday, for photographic and stereoscopic views of American scenery, graphoscopes and stereoscopes. They are intended for educational purposes.

Jos. Eichbaum & Co., Pittsburg, Pa., make their holiday announcements in a seven-leaf and cover, ribbon book, which serves to show off different styles of fine printing, plain and in colors. A very neat, tinted Christmas card is sent with the book.

J. H. Bufford's Sons have this week introduced two elegant series of advertising cards, in gold and colors. One is a juvenile sporting series, and the other is illuminated with pictures of the feline race. Judging from appearances this firm has transacted a very large business during the past season. Its valentine and Easter cards are

already in great demand and from present indications it will have a large trade in these goods.

Mors & Orr, stationers, North Adams, Mass., have sold out.

M. F. Tobin has done an unusal large business during the present season.

E. A. Fay, woodenware and paper dealer Davenport, Iowa, has assigned.

J. B. Lippincott & Co., Philadelphia, have issued their December bulletin of new publications.

Josiah King, of King, Reed & Co., publishers of the *Commercial Gazette*, Pittsburg, Pa., is dead.

Russel & Smith, publishers, Lake City, Minn., have dissolved partnership. Mr. Smith continues.

The stock of James D. Glynn & Co., booksellers and stationers, Bangor, Me., has been taken by mortgagees.

W. O. Hickok, Harrisburg, Pa., has issued a revised price list of Cherry press boards for bookbinders' use.

E. A. Hayes, publisher of the *Register*, Torrington, Conn., has taken H. M. White as a partner in his business.

J. C. Russell & Co., publishers of the *Press*, Campello, Mass., have dissolved partnership. J. C. Russell continues.

C. W. Clark & Co., wholesale dealers in paper hangings, San Francisco, Cal., have dissolved partnership, Mrs. C. A. Clark retiring.

Samuel Garre, Ohpacher Brothers' enterprising representative, returned on Wednesday from a successful trip in the interest of the firm.

F. A. Blackmar & Co., paper manufacturers, Detroit, Mich., have been succeeded by the Wolverine Car Roofing and Manufacturing Company, with a capital of $500,000.

The Lockwood Manufacturing Company, Philadelphia, has put in operation some new tag-making machinery, which has enabled it to reduce prices and it has accordingly got out a new price list of shipping tags, &c.

H. S. Adams, for many years connected with Woolworth & Graham, N. Y., and of late their resident Southern agent, will speedily close his business connection with that house. It is probable that he will continue in the paper trade, as representative at the South of certain leading manufacturers.

Levy Brothers, Madison, Ind., will change their style to Levy, Baker & Co., removing to Indianapolis on January 1. The new firm will confine itself to mercantile printing and the manufacture of stationery. The members of the firm are highly spoken of by the local press.

A BUSINESS OPENING.

A man with some experience in the **Book, Stationery and Fancy Goods Trade,** with $20,000 to $50,000 to invest, can form a connection with an old established house doing a business of $250,000 a year, in a thriving business centre in the West. The business can be doubled with additional capital. Address, with references, J. M., office American Stationer.

FOR SALE,

PAPER PRESS, LATEST PATENT, STAMPED "Piper's Latest." Address

SPRINGFIELD CITY PAPER CO.,

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, DECEMBER 21, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THE bankrupt bill is undergoing Congressional crucifixion. One of the latest propositions for its amendment is to include in the cases of involuntary insolvency those debtors who deal in futures in grain or other speculative commodities, and who do not own or are unable to deliver the goods when the settling-up day arrives. Isn't this rather forcing things?

SOMEWHAT unexpectedly the work of tariff revision has been actively taken up in Congress by the Ways and Means Committee, and during the present session a bill will be reported. Whether the work of the commission and of the committee is to go for naught remains to be seen. When it comes before the Committee of the Whole there will be amendment and discussion, and so much time will be consumed, that there is a likelihood that nothing will be accomplished,

IN every line of business there is opportunity for the development of a particular faculty, or, as it is generally called, a specialty. It is notable that our industrial enterprises are being divided up on this plan, and manufactories are established for the sole purpose of bringing out one feature, which is only a component, when put in its proper place, of one harmonious whole. But even in this regard there may be subdivisions, which, while essential to the production of the specialty, become in turn specialties in which people become trained. So in the stationery business there are divisions and subdivisions, which unite to make up the perfection of the trade. We recall these known facts because, although known, few people stop to consider or reason why these divisions of industrial effort occur. The desire to make some article specially good, or in other words, to study the fitness of things or to follow out to its fullness the bent of some idea or fancy which a particular turn of mind involves, are causes which lead to divisions of interests. To know one thing thoroughly and to do it well is much better than a cursory knowledge of a variety of things, and in the business education of boys or young men it becomes important that something more than such a superficial knowledge of their vocation should be gained. Frequently a young man is put to do work for which neither his inclination nor habits of mind adapt him. We do not refer to the youth who has no desire or ambition for any kind of work, but to him who, while anxious to learn and eager to accomplish, has certain business tastes and accomplishments which, if developed, will lead him to make his mark in the direction of his fancy or choice. We do not believe that a boy in beginning his business career should be forced to uncongenial occupation. There are, of course, exceptions to this, and it may often happen that where the novice enters upon a duty with which he is not in sympathy, he will in time gain such an appreciation of it that he will not forego its pursuit; but as a rule there are discriminations to be made, and the employer who asks for more than perfunctory service will make it his business to study the disposition of a young employee and give him the chance for advancing in that specialty or department of business to which he takes most readily. In the stationery trade in particular there are many opportunities for exercising this discrimination, and where a clerk or workman shows an aptitude for any branch of the business, he should be kept at it with a view not only to his own development and profit but for the purpose of enhancing the value of his services to his employer. We would even counsel, that where a clerk shows capacity for designing or for improving any mechanical feature, he should be advised to enter the workroom and aided to carry out his ideas in the direction to which they tend.

DUTY ON LAWN TENNIS BALLS.

The Treasury Department, in reply to the Collector of Customs at New York concerning an appeal from his assessment of duty at the rate of 50 per cent. ad valorem on certain hollow rubber balls and lawn tennis balls imported per Silesia, June 12, 1882, says: "The appraiser reports that the hollow rubber balls are of the same character as the balls covered by the De-

partment's decision of June 27, 1876, except that they are not painted, and that they were accordingly classified as 'toys' under said decision. Your assessment of duty is hereby affirmed. In regard to the lawn tennis balls, he states that they are of superior manufacture, in order to fit them for that game, which is a game for adults, and that, in his opinion, they should be classified as 'manufactures wholly of rubber,' at the rate of 25 per cent. ad valorem. In his opinion the Department concurs, and you are authorized to readjust the entry and to forward a certified statement for a refund of the excess of duty."

A NEW COPYING PROCESS.

A German scientific journal gives the following details concerning a new process for copying drawings. The writer refers to it chiefly as a method for copying drawings, such as those of engineers, but it is obvious that it may be applied to a far wider range of uses.

Procure the following:

1. A board a little larger than the tracing to be copied. The drawing board on which the drawing and tracing are made can always be used.

2. Two or three thicknesses of flannel or other soft white cloth, which is to be smoothly tacked to the above board to form a good smooth surface, on which to lay the sensitized paper and tracing while printing.

3. A plate of common double-thick window glass of good quality, slightly larger than the tracing it is wished to copy. The function of the glass is to keep the tracing and sensitized paper closely and smoothly pressed together while printing.

4. The chemicals for sensitizing the paper. These consist simply of equal parts, by weight, of citrate of iron and ammonia, and red prussiate of potash. These can be obtained at any drug store. The price should not be over eight or ten cents per ounce for each.

5. A stone or yellow glass bottle to keep the solution of the above chemicals in. If there is but little copying to do, an ordinary glass bottle will do, and the solution made fresh whenever it is wanted for immediate use.

6. A shallow earthen dish in which to place the solution when using it. A common dinner plate is as good as anything for this purpose.

7. A brush—a soft paste brush about four inches wide—is the best thing we know of.

8. Plenty of cold water in which to wash the copies after they have been exposed to the sunlight. The outlet of an ordinary sink may be closed, by placing a piece of paper over it with a weight on top to keep the paper down, and the sink filled with water, if the sink is large enough to lay the copy in. If it is not, it would be better to make a water-tight box about five or six inches deep, and six inches wider and longer than the drawing to be copied.

9. A good quality of white book paper.

Dissolve the chemicals in cold water in the following proportions: One ounce of citrate of iron and ammonia, one ounce of red prussiate of potash, eight ounces of water. They may all be put into a bottle together and shaken up. Ten minutes will suffice to dissolve them.

Lay a sheet of the paper to be sensitized on a smooth table or board; pour a little of the solution into the earthen dish or plate, and apply a good even coating of it to the paper with the brush; then take the paper to a board by two adjacent corners, and set it in a dark place to dry; one hour is sufficient for the drying; then place its sensitized side up, on the board on which you have smoothly tacked the white flannel cloth; lay your tracing which you wish to copy on top of it; on top of all lay the glass plate, being careful that paper and tracing are both smooth, and in perfect contact with each other, and lay the whole thing out in the sunlight. Between eleven and two o'clock in the summer time, on a clear day, from six to ten minutes will be sufficiently long to expose it; at other seasons a longer time will be required. If your situation does not admit of direct sunlight the printing may be done in the shade, or even on a cloudy day; but from one to two hours and a half will be required for exposure. A little experience will soon enable anyone to judge of the proper time for exposure on different days. After exposure, place your print in the sink or trough of water beforementioned, and wash thoroughly, letting it soak from three to five minutes. Upon immersion in the water, the drawing, hardly visible before, will appear in clear white lines on a dark blue ground. After washing, tack up against the wall, or other convenient place, by the corners, to dry. This finishes the operation, which is very simple throughout.

When a printer has executed a handsome job and is ready to send it to the customer, he should see that the package is as neat in appearance and in fact as the work itself. There is no excuse for doing up a lot of letter-heads, cards or anything else of the kind so that the ends or corners of the wrappers are wrinkled or rounded off instead of being compact and square. There is no more reason for sending a slovenly package of paper from a printing office than there would be for a paper maker to send out his reams in the same manner; and we opine that if the latter should even occasionally deliver stock in the slipshod shape too prevalent in many printing offices, he would "hear from it" in no uncertain tones. A little judgment and common sense, coupled with slight experience, will enable almost any person of average ability to wrap packages in a neat and satisfactory manner; and it ought always to be insisted upon. We are all easily pleased with good outside appearances; and a consignment of printing neatly wrapped creates a more favorable impression than one which, in its delivery, evinces haste and carelessness.—*Electrotyper.*

The following is translated from a German scientific journal: The solubility of carmine-lake in caustic aqua-ammonia, is attended with this disadvantage, that in consequence of the alkaline properties of ammonia, the cochineal pigment will in time form a basic compound, which, in contact with a steel pen, no longer produces the intense red, but rather a blackish color. To avoid this evil the German paper recommends the following, as a good means of preparing the ink: Triturate one gram of pure carmine with fifteen grams of acetate ammonia solution, and an equal quantity of distilled water in a porcelain mortar, and allow the whole to stand for some time. In this way a portion of the alumina which is combined with the carmine dye is taken up by the acetic acid of the ammonia salt, and separates as precipitate, while the pure pigment of the cochineal remains dissolved in the half-saturated ammonia. It is now filtered, and a few drops of pure white sugar syrup added to thicken it. In this way an excellent red drawing ink is obtained, which holds its color a long time. A solution of gum arabic cannot be employed to thicken this ink, as it still contains some acetic acid, which would coagulate the bassorine, one of the natural constituents of gum-arabic.

For rendering paper and fabrics impermeable to water, the following process has been discovered. A composition is prepared with nitrate of potassium (saltpetre), 200 lbs.; resin, 270 lbs.; gum, 30 lbs.; slacked lime about 100 lbs. A milk of lime is first prepared, then the saltpetre is dissolved in water, and heated in a boiler, then so much lime is added that it does not become pasty, when the two other substances, which have been fused on a slow fire, are added. This composition can be left to cool, and being unalterable can be kept for use. To render tissues waterproof 100 lbs. of this mixture are dissolved in one gallon of boiling water, while, on the other hand, 10 lbs. of alum are dissolved in 10 gallons of water. The fabric is first passed into the first solution, then into the second, and finally dried between the cylinders. Paper and other goods can be treated in the same way. For white paper the gum is omitted.—*German Paper.*

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, December 20, 1882.

THE MONEY MARKET. — The rates of discount of prime marcantile paper are 6@7 per cent., with acceptances passing as low as 5@5½ per cent. Second and third-rate paper is slow of sale at 8@10 @12 per cent. Before the turn of the year, the Tresury will pay off many millions of called bonds held in this country and in Europe, and the disbursements will add just so much money to the available supply. The stock market has been for the most part weak, with no new features of a noteworthy or interesting character. Government bonds have been irregular, though the fluctuation of prices has been narrow. The better class of railroad bonds are firm.

Bankers' sterling is a fraction easier, but commercial sterling is scarce and firm. Continental bills are unchanged, if we except a slight improvement in German reichmarks.

THE PAPER MARKET.—There is no new feature in trade this week. Business is very much the same as it has been since the month opened. Although, as a general thing, there is an indisposition to make new transactions so close to the end of the year, we hear of considerable doing in the renewal of contracts for the coming year, and in most instances on terms very satisfactory to the manufacturer, particularly on book and news, which rule steady and fairly firm. Some of the manufacturers are experiencing considerable delay and trouble through anchor ice. The manufacturers of straw board, and the members of the Lining Association met in this city last week, and although several sessions were held, and considerable discussion had, they arrived at no understanding, and adjourned without anything being done. The prices of straw boards remain as they have been quoted of late.

THE STATIONERY MARKET. — Business this week has continued almost entirely of a retail character, and in some lines of goods suited to the holidays; stocks have been pretty well cleared out, while in others dealers will carry over more goods than usual. This fact is probably not disappointing to many, as in anticipation of an unusually large demand for all kinds of goods, heavier stocks were placed on the market than in any previous season for many years. Taking all branches of the trade together, dealers express themselves satisfied with the result of the season's business. With the close of the holiday trade next week, business will settle down to the quietude which usually follows a busy season, and very little activity will be expected for some weeks to come. Some of the trade have already begun the annual taking account of stock, preparatory to striking their balances, and to start out on a new year. No changes are reported in prices of staples, which remain steady and fairly firm.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention.' Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

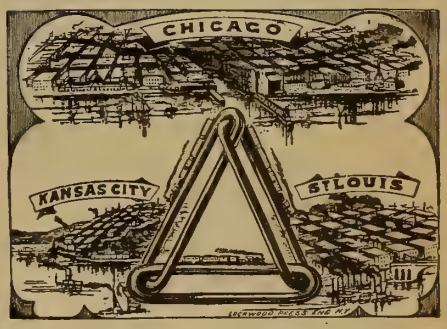
We have positively the largest and most varied assortment of goods in this line handled by any one in the United States. Catalogue mailed upon application.

J. B. CLARKE, Proprietor.



TO MAKE BRONZED PAPER.

Dissolve gum lac in four parts by volume of pure alcohol, and then add bronze or other metal powder in the proportion of one part to every three of the solution. A smooth paper must be chosen, and the mixture applied with a fine brush. The coating is not dull, and may be highly burnished.

Another process consists in first applying a coat of copal or other varnish, and when this has become of a tacky dryness, dusting bronze powder over it. After remaining a few hours, this bronzed surface should be burnished with an agate or steel burnisher.

The best way to clean old brasswork is to boil the brass in potash or soda until all the old bronzing and grease is thoroughly cleaned off. The brass may then be pickled to take off such spots as cannot be removed by the potash. The potash solution may be made of common potash, 1 part, by weight, to 10 parts of water. The sulphuric-acid pickle is made of from 5 to 20 parts of acid to 100 parts of water. After coming out of this bath they ought to be very thoroughly washed in water and dried in sawdust, and care must be taken not to handle them with the hands. It is best to try a few small pieces first to get the solution right. Dark bronze for application to brasswork can be bought in the form of powder, or it can be obtained ready mixed. If not dark enough, a little umber or other similar coloring material can be added to it so as to give the required tone. It is out of the question to give a recipe for making the powder itself, since this is a trade by itself, which is jealously guarded and is known only to a few persons. The apparatus required in making bronze powders is out of reach of an ordinary mechanic.

Power Embossing PRESS.

THIS is a powerful and simple machine, and is complete in every respect. The power can be thrown off and a break stops the bed instantly, thereby saving any covers or expensive plates from being damaged. The press is worked by a cam and toggle: the impression is regulated by bevel-cut gears on top, and the bed platen can be run up or down by hand-wheel on left side. Our new method of using steel rods makes the press much stronger than iron cast frames. It has a movable bed; can be used for steam or gas heat; is supplied with oil cups. This Embosser is strong and large enough for all regular work in a bindery.

Space between upright rods, 17 ins. Size of head, 9½ × 13½ ins.

PRICE, $375.00.

ILLINOIS IRON AND BOLT CO., Carpentersville, Kane Co., Ill.

HOW LACQUER WARE IS MADE IN JAPAN.

In making Togi-dashi on hard woods, transparent lacquer is used instead of Ro. Flat-gold lacquer is made as follows:

The article having been thoroughly finished, either in black or red, a tracing is applied to the surface as in Togi-dashi, the outline is carefully painted over with a fine brush of rat's hair, and then filled in with a hare's-hair brush, using branch lacquer and red oxide of iron. Over this surface gold dust is scattered with a brush of horse's hair till the lacquer will not absorb any more. The article is then set to dry for twenty-four hours. A thin coating is next applied over the gold of transparent lacquer, and set to dry for twenty-four hours at least. It is then most carefully smoothed with camelia charcoal, and finally polished off with Tono-ko and a little oil on the point of the finger, till the ornamented portion attains a fine polish. The veining of leaves and the painting of stamens of flowers, or such other fine work, is now done with a fine rat's-hair brush charged with Keuchi lacquer, over which fine gold dust is scattered from a brush of horse's hair, as before, and the article set to dry for twelve hours. Some Yoshino lacquer is then applied to a piece of cotton wool, and rubbed over the whole surface of the box or other article, and wiped off again with soft paper. It is set to dry for twelve hours, after which it is polished off with deer's-horn ashes and a trifle of oil. When very high-class work is desired, Yoshino lacquer, to which a little water has been added, is applied, and polished off a second time, and a very brilliant surface is attained.

More ordinary flat-gold lacquer differs in the manufacture as follows: The tracing is accomplished in the same manner, branch lacquer, red oxide of iron and camphor is used for filling in the pattern with a hare's-hair brush. The article is then set to dry in the press for ten to twenty minutes, during which time the lacquer has begun to harden, and less gold will adhere. Then gold dust is applied with cotton wool thinly, and the article is set to dry for twenty-four hours. The whole surface is then smeared over with Yoshino-nobe lacquer on a piece of cotton wool, and wiped off again with soft paper. The reason is, that it is less trouble to smear over the whole surface thinly, and it is, moreover, not necessary to give a thick coat of lacquer to the decorated part, as the gold dust has been very thinly applied. It is set to dry for twelve hours and ground smooth with camelia charcoal and polished with powdered whetstone and oil on the point of the finger. The fine lines are then drawn with a rat's-hair brush charged with Shitamaki lacquer, and sprinkled with gold dust from a brush, and the article set to dry for twelve hours. The whole is again smeared with Yoshino-nobe lacquer and carefully wiped off again with paper, and set to dry for twelve hours. The article is then polished with powdered whetstone and oil on the point of the finger, and a second application of Yoshino-nobe lacquer, with a little water, wiped off with soft paper, set to dry for twelve hours, and finally polished off with deer's-horn ashes and oil on the finger, finishes the operation.

Should it be required to make any dark spots or lines, such as bird's eyes, or to draw human hair or other shading, this is done last of all with bear lacquer and lampblack.

For more common kind of flat-gold lacquer, painting the design, instead of being traced in roasted lacquer, is done with a mixture of powdered Tono-ko and water, and the impression is

transferred to the articles with the whalebone spatula as before. The reason for only using Tono-ko instead of lacquer is that the groundwork being inferior, it cannot be ground or smoothed afterward, and the edges of the pattern would not be clean nor stand out clear should any lacquer get smeared outside the tracing line. The outline is then filled in with Shitamaki-nobe lacquer with a coarse hare's-hair brush, and the article is set to dry for twenty minutes, or till a thin skin has formed on the lacquer, and then the half-dry surface is wiped over with Keshi-fun, the finest gold powder, and set to dry for five or six hours. The whole surface is then smeared with Yoshino-nobe lacquer, which is carefully wiped off again with soft paper, and the article set to dry for half a day. The surface is then rubbed over gently with deer's-horn ashes and soft paper to give it a polish, and to get rid of any of the last coat of Yoshino-nobe lacquer.

The fine lines are now drawn with a fine hare's-hair brush charged with Shitamaki-nobe lacquer, and the article set to dry for twenty minutes or so; then Keshi-fun is applied with cotton wool, and again set to dry for five or six hours. No further process takes place.

For raised gold lacquer-work the groundwork may be either of black or colored lacquer. The outlines of the pattern are transferred to the surface of the article in the same manner as in Togi-dashi, or flat lacquer. The outline is then painted over with Shitamaki lacquer, and this is covered with powdered camelia charcoal. If the outside is to be higher than the inside, a broad margin is painted and covered with the charcoal powder, leaving the centre untouched, and *vice versa;* if the centre is higher a faint line is only painted outside, and the inside is given a thickish coating which is sprinkled with the charcoal dust, and the article set to dry for twelve hours. When taken out of the press it is well dusted, to get rid of any loose charcoal powder, and is also washed, using a brush made of human hair to clean out all crevices and bring out the lines, &c. Some Yoshino-nobe, or branch lacquer, with camphor is now rubbed on with a piece of cotton wool, and carefully wiped off with soft paper, and the article set to dry for twelve hours. The raised parts are next carefully ground smooth with a piece of magnolia charcoal, and a second coat of Yoshino-nobe is applied and dried.

If a well-raised pattern is required, one, two, or even three coats of branch lacquer and Tono-ko are applied, the outside edges being painted with a brush of deer's hair and the inside lacquer applied with a small Sabi spatula, the article being set to dry between each application for twelve hours. For coarser work it is then ground smooth with a white whetstone, and for finer work with a yellow whetstone. Over this some branch lacquer, mixed with camphor, is rubbed with cotton wool and wiped off with soft paper, and the article is set to dry for twelve hours.

If the pattern is not to be very high the operations described in the last paragraph are omitted. A coating of Taka-maki lacquer is not given, the outside edges being carefully drawn with a rat's-hair brush, and the inside of the pattern filled in with a hare's-hair brush, and the article set to dry for thirty-six to forty-eight hours. When taken out of the press the surface is ground smooth with magnolia charcoal, and then partly polished with powdered camelia charcoal on a cotton cloth. A little oil is now rubbed on, and a further polishing takes place with powdered whetstone on a cloth. Next branch lacquer is rubbed over the raised parts with cotton wool and wiped off with soft paper, and the article set to dry for twelve hours. It is next polished with deer's-horn ashes and a little rape seed, or sesamum oil applied on the point of the finger. Up to this point the formation of the pattern, whether mountains, waves, trees, men, birds, or animals, has been gradually completed.

[To be Continued.]

CRAYONS IN VITRIFIABLE COLORS.

Mr. Lacroix, a Parisian chemist, has introduced crayons similar to the ordinary lead pencils, the lead being replaced by vitrifiable colors. The colored designs which are executed with these crayons on slightly roughened glass bear the heat of a muffle, and are fixed like a painting upon glass. The grays especially give excellent results. A similar process, which was tried upon porcelain some years ago, was unsuccessful, probably because enameled surfaces were used. On biscuit it is likely that good results might have been obtained.

— MANUFACTURERS OF —

PRINTING PRESSES

THE above cut represents our NEW TWO-REVOLUTION PRESS The great advantages of this machine are its speed and the facility with which it can be handled for all kinds of work. In these times of Low Prices and consequently small profits, speed combined with good work is an advantage the value of which cannot be overestimated.

The above Press, for fine as well as fast work, became at once popular. The Cylinder revolves twice—first in a raised position to clear the form; the second time in contact with the form while giving the impression. The largest illustrated forms are printed at a speed of from 1,800 to 2,000 per hour, with perfect safety. Indeed, the speed is limited only by the capacity of the feeder. This Press is capable of doing the finest quality of ILLU TRATED and COLOR WORK, and has proved to be the most economical and profitable Press yet introduced.

We have incorporated the following patented improvements: 1. Our Air-Spring and Governor, which enable the machine to run ONE-THIRD FASTER than any other Press of its class in the market. While at a speed of 1,800 per hour, and with the weight of a full form, about 4,000 pounds pressure is required at each end of the press to arrest the momentum and reverse the bed; but our Governor Attach nent so completely contro's the Air-Spring—increasing the pressure exactly with the increase of speed and momentum, and decreasing the same as the Press comes to a stop - that the great amount of spring required is no incumbrance or hindrance in the running of the machine, as it is with the wire-spring. When the Press comes to a stop, the Spring is thrown off automatically, so that it can be turned over the centre by hand with the greatest ease and without compressing the spring. 2. Our device for Controlling the Momentum of Cylinder, by which perfect register is insured at the highest rate of speed. This is an impossible feature on any other press. 3. Our Hinged Roller-Frame, which affords peculiar facility in handling the rollers and distributors. 4. Our Sheet Delivery without tapes, which is so easily adjusted that any variety of printed matter can be delivered to the Fly and deposited on the Pile Table without possibility of smut or blemish. For a still more rapid class of press-work, we build these Presses with TWO Form Rollers, supplied with the Table Distribution, or the Rack, Cam and Vibrator Combination, on which a speed of 2,500 per hour can be had.

CHICAGO.

DUTY ON FANS.

The Treasury Department, in reply to the Collector of Customs at Boston concerning an appeal from his decision assessing duties at the rate of 60 per cent. ad valorem on certain fans imported per Marathon, says: "The fans are composed of silk and bone, the silk being ornamented with floral designs painted thereon, and it appears that while the articles cost from 10 francs and upward, the plain silk is worth only from 1 to 1½ francs, although the silk and the decoration combined constitute the chief value of the completed fans. Were the paintings on some other portion of the fans than that composed of silk, the fans would plainly be dutiable at the rate last mentioned, and the Department is of opinion that the mere location of the decoration in such cases should not govern the classification, and that in the present instance the value of the silk fabric, as cut from the piece only, should be taken into consideration in deciding whether or not the completed article was dutiable at 60 per cent. ad valorem, under the provisions of the act of February 8, 1875, for all 'goods, wares and merchandise * * * made of silk, or of which silk is the component material of chief value.' You will, therefore, reliquidate the entry, and take measures for a refund of the duties levied in excess of 35 per cent. ad valorem. The decision of December 23, 1875 (Synopsis, 2566), relating to certain jewelry in which silk was stated to be the component material of chief value, is not held to refer to cases like the present."

KEEPING SILVERED GOODS.

Stationers will be interested in learning that the annoying tarnish which deteriorates the value of their silver goods can be avoided by painting it with a mixture composed of collodium dissolved in alcohol. The liquid dries immediately and forms a thin, transparent, and absolutely invisible coating upon the silver, which completely protects it from all effects of the atmosphere, &c. It can be removed at any time by dipping the article in hot water. This recipe has been in use for some time in some of the large establishments in London, where most of the goods in the show-cases are protected in this manner.

GILDING BRONZES.—The following mixture has been recommended for cheaply gilding bronzes, gas-fittings, &c.: Two and one-half pounds cyanide of potash, five ounces carbonate of potash and two ounces cyanate of potass, the whole diluted in five pints of water, containing in solution one-fourth ounce chloride of gold. The mixture must be used at boiling heat, and, after it has been applied, the gilt surface must be varnished over.

The ormolu of the brass founder, popularly known as an imitation of red gold, and which is extensively used by the French workers in metals for artistic and decorative work, is composed of copper and zinc. A greater proportion of copper and less zinc is used in its preparation than in making ordinary brass. It can be readily cleansed with acid, and can be burnished with facility. To give this material a rich appearance, it is not infrequently brightened up after "dipping"—that is, cleaning in acid—by means of a scratch brush (a brush made of fine brass wire), the action of which helps to produce a brilliant gold-like surface. It is protected from tarnish by the application of lacquer.

ANNOUNCEMENT.

WE would announce to the trade that we have remaining on hand a limited number of copies of the exquisite Valentine Poem, "My Love," which we published last winter, owing to the failure of the lithographers to furnish us all the printed sheets in time for us to mount and deliver to the trade previous to February 14th last. This valentine was illustrated in 16 colors, after designs by Carl Gutherz, the well-known Artist, and was mounted in several beautiful and novel styles, and altogether, was pronounced by critics to be the finest and most artistic Valentine ever published in this country, and one that would be of permanent value.

We append a few of the many newspaper notices published at the time it was issued.

As the number is limited, orders will be filled in the course that they are received, so that we would suggest the importance of ordering early all that are desired. Our orders for them last season continued coming until April, from those who had been unable to secure them before St. Valentine's Day.

NOTE.—We have but a very few copies mounted in styles No. 3 and 4, and cannot duplicate them after those styles are exhausted.

The designs are 6 × 9 inches in size, and mounted in five different styles, as follows:

STYLES OF MOUNTING.

No. 1.—Plain with silk hinge, cord and tassel; an ornamental card-board protector and envelope, ... each, $2.00

No. 2.—Same with heavy silk fringe, cord and tassels, card-board protector, and inclosed in a box instead of an envelope, ... each, $2.50

No. 3.—Mounted between heavy Passe Partout Mats, 8x11 inches; gilt edge, in box, each, $3.50

No. 4.—Bound in Album style, gilt edge, heavy beveled boards, silk finish muslin, in box, ... each, $3.50

No. 6.—Same as No. 2, but inclosed in a handsome Silk Plush Box, . . . each, $5.00

NEWSPAPER NOTICES.

"MY LOVE: A POEM FOR ST. VALENTINE'S DAY," is one of those beautiful conceptions which are perfectly suited to the purpose for which they are designed, and which, if they do make the sender's heart ache for the emptiness of his purse, proportionably heighten the happiness of the fair one who sees in the cost a measure of the passion she has inspired.

Certainly, this Valentine is elaborate enough to meet the requirements of the most exacting beauty, and might even stir the heart of a princess. * * * * What more can be desired to soften an obdurate heart or convey to a pretty bird, the tender prayer, "Mate with Me?"—*Independent, New York.*

THE old style of Valentine—a fragile offering of lace, paper and silk, apt to fall to pieces if touched or looked at very hard—is rare this year. In its place is the card, large and small, and the noticeable feature of the improvement is the introduction of floral landscape designs, with an appropriate bit of verse to set off the artistic design, and give it the added sentiment considered a necessary accompaniment. Among the choicest designs noticed, is one entitled "My Love," in the form of a six-leaved book, and mounted in various beautiful styles, the finest of which is in a box covered with plush. A spring scene with two doves nestling in the branch of a tree, made up the first page design. The succeeding pages disclosed groups of daisies, pansies, roses and violets; while the last design represented a merry Cupid with the traditional bow and quiver with a wreathed mirror resting upon the following inscription:

"Sweetheart, wouldst thou the features trace
Of that fair maid whose charms I've told?
Then look into thy looking-glass.
And wouldst thou know who is so bold?
Wilt thou be mine as I am thine,
I'll tell—I am thy Valentine"

—*Daily Tribune, Chicago.*

THE Acme Stationery and Paper Company have published a most exquisite Valentine entitled "My Love," artistically mounted in novel styles that will be generally admired.—*Daily World, New York.*

THERE certainly never were so many pretty things made before as in this year of grace, and one fairly gets dazed trying to make up his or her mind with regard to the relative merits of articles appealing to the cultured taste. This reminds me of a peep I have had of an Exquisite Valentine poem entitled "My Love," illustrated with six designs in water-colors, and finished in the highest style of art. Full of all Spring prettiness in pictured conceits are the illustrations by Carl Gutherz, in his happiest grace of drawing, and rich with the charm of his exquisite coloring. * * * * Thus one page, in whose foreground Cupid and two beautiful children play amid ferns and cat-tails and water reeds, on a shore dotted with daisies, under a sky where the crescent moon almost pales amid a myriad of stars, is still further illumined by such a verse as this:

"My Love is like the daisy bright,
Which gladdens all the fields by day,
And whispers to the stars at night;
While fairies list to what they say,
And angels come and go between,
Only by stars and flowers seen."

Another page between, with violets all in a sweet tangle of purple beauty, and so natural that they almost cheat you into reaching after them, incloses a verse as exquisite as the blossoms. * * * * I predict for this little art work an immense success, and I whisper my praise now, that I may say with a woman's delight a few weeks later, "I told you so."—*Spectator, St. Louis.*

THE LICHTDRUCK PROCESS.

M. Gemoser, of Munich, publishes the following about the application of the lichtdruck process of photography, as being so much more valuable because no extra grinding of the wood-block is required.

The great favor which lichtdruck transfers upon wood meet with may, in comparison with the silver print, and aside from the greater sharpness of the lichtdruck prints, have for its reason that the so-called after darkening of the sunken or already engraved parts of the wood-block, so troublesome to the engraver, is avoided.

For several years I have prepared my wood-blocks after the following method, and entirely satisfactory to my customers: The grounding of the wood-block is done with the fresh white of an egg and the finest zinc, or flake white, which are ground in a dish to an emulsion, and to which are added from eight to ten drops of gum-arabic to each egg, to retain the flexibility of the ground. The emulsion is now put on the block, just enough to make a thin coating. This is done with a circular motion of the fingers, removing all the obstructions, and finally spread to a thin and even surface with a flat badger or camel's hair brush. The thinner the ground the more suitable it is for the wood engraver. If the veins, rings and notches that are in the wood are yet only faintly visible after the grounding, it may be accepted as a rule that the ground has the right density, and a little experience will soon give the necessary practice.

As transfer paper I use Chinese paper, and to give the same more body, I add a sheet of thin paper, such as is used for copper-plates.

The printing is done with the common lichtdruck ink, so that the Chinese paper (being previously moistened between blotting-paper) is put upon the rolled lichtdruck plate, and upon this the moistened copper-print paper (in both pasted sides downward) is drawn through the press, and the whole is taken up as a finished print in one piece.

If a good print has been obtained in this way it is placed for half an hour between two sheets of moistened blotting-paper. Before transferring, the wood block is rubbed off with cotton, and the print is put upon the block picture side down, then drawn twice through the press and the paper (upon which the picture should be visible only in a faint gray tint) is taken off the block.

If the grounding was of the right strength, and the print saturated and damp enough, there will remain color enough upon the block for the contemplated purpose.

HOW TO PRESERVE PENCIL SKETCHES

The pencil drawings of mechanical draughtsmen and engineers may be rendered ineffaceable, according to a German contemporary, by a very simple process. Slightly warm a sheet of ordinary drawing paper, then place it carefully on the surface of a solution of white rosin in alcohol, leaving it there long enough to become thoroughly moistened. Afterward dry it in a current of warm air. Paper prepared in this way has a very smooth surface. In order to fix the drawing the paper is to be simply warmed for a few moments. This process may prove useful for the preservation of plans or designs when the want of time or any other cause will not allow the draughtsman reproducing them in ink. A simpler method than the above, however, is to brush over the back of the paper containing the charcoal or pencil sketch with a weak solution of white shellac in alcohol.

ANNOUNCEMENT TO THE TRADE.

No. 100. Mounted Enamel Pencil.

The New A. T. Cross "Business" Pencil,

U. S. PATENT AUG. 29, 1882. PATENTED IN ENGLAND.

We take pleasure in presenting to the Trade our lately perfected, neat, substantial and convenient Pocket Pencil, made in various styles, and for which we claim superior excellence over any pencil ever placed on the market. Its most prominent feature is known as a **"Propel, Re-pel and Ex-pelling Lead,"** three features never hitherto brought into one combination. It is also made strong and durable in all its parts, the cases of every style (save one) being of Day's best quality hard rubber, and the mountings are of superior gold stock plate (not the ordinary electro plate or fire gilt, which soon wears off) and will keep bright and do service for years. Prices are nearly 50 per cent. less than any goods of the **same grade** that have ever been offered, and we recommend the early attention of the Trade to this pencil.

The accompanying are cuts of the four leading styles, retailing from 35 cents to 75 cents each.

Illustrated Circular and Price-List on application.

No. 108. Extension Rubber Pencil. OPEN.

No. 109. Extension Rubber Pencil. CLOSED.

Correspondence Solicited.

Address:

THE CROSS PEN COMPANY,

ENGLISH HAND-MADE PAPERS

ORIGINAL EYNSFORD MILLS,

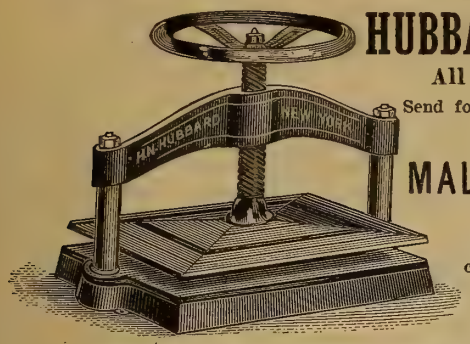
WATER-MARK:

"FELLOWS"

KENT, ENGLAND.

These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers Lor Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.



Proprietor: JOSEPH ARNOLD, Eynsford Mills, KENT, ENGLAND.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**

Each sheet is water-marked with name and date.

The American Stationer

A Journal Devoted To the Interests of the Stationery & Fancy Goods Trades

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. XII.---NO. 26. NEW YORK, DECEMBER 28, 1882. WHOLE NO. 392.

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., December 26, 1882.

The beautiful Christmas Day was in magnificent keeping with the great gladsome heart of the people who in the morning had exchanged gifts in token of the friendship and brotherly love that they bore to each other. At one time during the past week it looked as though the shops would be entirely depleted of their goods, so unusually large has been the gift-buying this year; but the stationers and others were not to be caught napping for their ample stocks of goods, although heavily drawn upon, have proved equal to its festive occasion.

The leading stationers and dealers in fancy goods, books, &c., tell me that they have not experienced such a rush of trade as that of the past fortnight, and that although the general character of purchases is not as expensive, perhaps, as that shown in some years past, yet the volume and net receipts of trade are much larger, thus indicating a more liberal expenditure of money for Christmas goods than has been the case for some years; and also indicating that there are less Scrooges in the land, and that holiday week is a decidedly bad time for stingy people.

All of the stationers—importers, wholesalers, jobbers and retailers—have done a good business, thus experiencing a pleasing climax to the year's trade. But New Year's Day is yet to come; we are now on its threshold, and as a general thing here, at least, it affords a more expensive line of goods purchased. Dealers have been engaged in replenishing their stocks, some lines, notably albums, papers, cards, counting-room material, &c., having run quite low. A few days hence a rest will come after the rush and crush.

Bufford's Sons report that their means for supplying the demand for their art novelties were severely taxed, although they had, as they supposed, fully calculated upon the call for their goods. And what is true of this house is also true of all the other novelty and art-publishing houses.

Louis Prang & Co.'s Easter cards are eagerly sought for, and their business in this line will be very large this year. They have succeeded in placing upon the market some lines of very exquisite and artistic goods; but what else could be expected of Prang & Co. They always fully anticipate the popular demand, and sometimes are in advance of it.

If I am not mistaken, there has not been a failure or suspension among the stationers in Boston during the year 1882. This speaks well for the guild. It is possible that there may be a few changes in the *personnel* of two or three firms and one or two new firms established. Business among the stationers has been, upon the whole, better than it was last year, with a very few bad accounts holding over.

Trade in the country is reported good and collections fair, especially in the factory towns, where a good deal of money has been spent this year in ornamental as well as useful goods.

Shopkeepers have advertised more liberally this year than they ever did before, and they find that it pays to use printer's ink in that form.

The numerous lines of unique goods have also contributed largely toward an augmented trade. People want variety, and the curiosity is quickly excited and the cash comes.

M. M. Ballou, the veteran publisher, who is now on a trip around the world, was in China at last accounts.

The cheap newspaper mania is thriving here. First, it was the *Journal*, reduced from three cents to two cents per copy. On the first of January the blanket-sheet, *Transcript*, will be reduced from four to three cents.

The new manager of the venerable *Advertiser* is only twenty-eight years of age; and he will put fresh young blood into that sheet. L.

LOUISVILLE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

LOUISVILLE, Ky., December 22, 1882.

The business men of Louisville have taken hold of the project to have here in 1883 a great cotton exposition, in a manner which shows that they are in earnest. Books were opened at the rooms of the Board of Trade, and in ten days, with very little solicitation, $137,000 of the stock was subscribed for. The 14th inst. was then set apart for a general canvass of the city. Every business block was visited, and $60,000 additional were secured. Several of the railroads, the banks and a number of large corporations, whose co-operation is assured, have yet to enter their subscriptions. The amount pledged to date is $210,000, and there is scarcely a doubt that the $300,000 decided upon as the necessary capital stock will be subscribed by January 1. The general interest in the undertaking has been unexampled in the history of the city, every class coming promptly to the aid of the directors.

It is proposed to have an exposition here on a scale twice as large as at Atlanta; fifteen acres will be under cover. The buildings will be located near the central position of the city, easily accessible by street cars, and open at night, lighted by electricity. The central idea will be cotton in all of its ramifications, but special care will be taken to represent every phase of Southern agriculture, and also to have the finest representation of the mining and manufacturing industries of all the Southern States ever made. Grain, tobacco, hemp, rice, sugar-cane, sorghum, jute, and tropical fruits will be fully presented. The plan is exceedingly broad and comprehensive; all the capital required will be raised in Louisville, and the exhibitors from the North, from New York, Pennsylvania and New England, are already sending in their applications for space. It is the purpose of the management to have every exhibit complete on opening day. To accomplish this, it is probable exhibitors will be required to deposit $50 as an entrance fee, one-half of which will be returned to every exhibitor who is ready on the day fixed for opening the exposition, which will be August 1, 1883, and will continue 100 days. The directory is composed of our most active, sagacious and substantial men of business, and it has the entire confidence and support of the community; B. Du Pont has been chosen president.

A special invitation is hereby extended to the constituency of THE AMERICAN STATIONER—the stationery, paper and fancy goods trades of the world—to arrange to be represented in the Southern Exposition, at Louisville, in a manner worthy their great interests and in keeping with the splendid opportunity to be afforded them here. Chicago promises to send down her strongest cards to attract Southern trade, and the whole South will come here to see what the Northwest, the East, the Middle States, and the broad West have to sell, and to display her resources for the general good. Why, it will not only be a cotton States' exposition, but a real national exposition of these great United States; so let everybody come; our location is central, our climate healthy, and we know how to entertain.

The trade situation has presented no special features in the past month; the weather was for the most part mild, and winter goods have in consequence moved rather slowly.

In holiday supplies trade has reached fair average dimensions, and the end of the season will probably show satisfactory results. Stationers report a liberal demand for the better class articles in their stock, while cheap grades have been somewhat neglected, doubtless because their low priced goods are carried by so many trades in other lines.

The Xmas card business is rushing; in fact it may be said that the use of these cards is so general this year as to be called a craze or

mania if you please; dealers in almost every branch laid in a stock, and after a tour of inspection it looks as if everybody had nearly sold out. But I am sorry to say that "leaders" were so numerously made of them, that many of the standard cards were sold at actual cost, when, if the trade in these beautiful articles could be placed on the proper basis a reasonable profit would be assured to all.

Booksellers report tree calf and morocco bindings selling better than last year, and bookbinders have made their selections with more than ordinary perspicacity.

In general merchandise lines there is a little complaint of over-stocks, especially in wares adapted to a severe season.

The newspapers teem with sensational advertisements, and the efforts to sell goods as well as the inducements to buy them were never greater. The last few days have been rainy and muddy, consequently there has been less "shopping" but quite as active buying as expected.

On the whole, it looks as if everybody down this way is in the mood to extend and enjoy "A Merry Christmas and a prosperous New Year."

BOURBON.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., Christmas, 1882.

Never before in the Ohio valley were there such rejoicings at the anniversary of the day on which was heralded "Peace on earth, good will to man," as on the occasion of this blessed Christmas. There was no incitement to this general volcano-like eruption of joy and love from human hearts, except the general enjoyment of means to give expression to these emotions. The universality of this expression was the result, not of collusion, but of that touch of nature which makes all the world akin. The post-office here has for more than a week been overwhelmed with mails. The night force has been worked about to death distributing the incoming and outgoing packages, nine-tenths of them tokens of love and friendship. It never was so before. "Just look at that pile for Walnut Hills alone," said a postal clerk to me only a night or two ago, as I stood by his side at the midnight hour. "That's Christmas," he said, "and it's only what the mail brought." I looked, and there lay a two-horse load of mail packages. You are late, I remarked. "Why," said the clerk, "it's only an hour and a half after midnight and we haven't more than a half hour's work to do yet." "You ought to have seen us last night," he continued, "when we had a mail that kept us to half-past four in the morning—all Christmas stuff." Well, you had Christmas on top of your business mail, I observed. "Business," said he; "why business has about stopped. There's nothing now but Christmas."

I examined the express offices. There are four of them here. For a week before Christmas they doubled their several clerical forces and tried to send out matter in a business-like way. But the crowd grew so great that it was impossible to handle this exceptional business systematically; so load after load of express matter was sent out without billing. Colored people were buying a pound of candy and sending it off into Kentucky and Tennessee to some darling, paying from twenty-five to fifty cents expressage. Train after train kept coming in bringing load after load of express matter, not merchandise, but presents, till the express office warerooms were actually blockaded. All day Sunday goods were delivered and clerks worked day and night. No such flood was expected, and they were overwhelmed. They had no recourse but to patiently work to clean out the blockade, bit by bit, day by day, listening all the while, patiently and sympathizingly, to the impatient complainings of those who should ordinarily have received their packages from forty-eight hours to three days sooner than they did. In the country it has been impossible for traveling salesmen to do business. They have all come home and they will remain till after New Year. Mercantile business, except in holiday goods, has about stopped. To-day the city has a Sunday look. All the shops are closed. What is strangest of all, the report of the pistol and the fire-cracker is not heard on the street. The highways, on the foot-walks and in the street cars, are full of tidily-dressed people wearing happy faces. Nearly everywhere the children are indoors, and to-night in the homes of the rich and the poor the lamp-lights and the fire-lights there will shine brightly, but the brightest light in these home-circles will radiate from human eyes.

Last Wednesday one prominent Cincinnati bookseller and stationer hadn't a fringed card of any sort left, and from that day to this his Christmas stock consisted of common stuff. Another Vine-street stationer sold out all his Christmas cards before dark on Saturday. On Fourth street the shops were stripped of fine cards. Then the rush for papeteries everywhere was astonishing. Dealers made pyramids of them on the counters, and pile after pile faded away, as if they had evaporated. Such a thing as looking out for rogues was impossible. There does not seem to have been much lost by them. And the sale of children's books! Why it was astonishing. "Zigzag Journeys"—the whole stock of the whole set was cleaned out in several places, and so of other instructive and entertaining books. Dealers had to rob their showcases and show-windows to satisfy the demand. In all sorts of standard literary works in plain, good binding the sales were immense. Fancy goods of all descriptions disappeared as if by magic. These tokens of love went not only to local city homes, but journeyed out all over the land. Streams and streams of them will flow out through the railway channels for days to come, as they have done for days past, and torrents of them have already rushed in. The most sanguine of dealers did not expect anything like this. The most surprising thing is the general prevalence of the giving spirit all through and all over the country.

All this has more than one meaning. To the commercial man it means that prosperity is general; to the humanitarian it means that the race is progressing in culture and refinement, and that it is learning that

> "Every gate that's barred to hate,
> Will open wide to love."

What can be said about business? Why the bookseller and the stationer have contributed immensely to the enjoyment of this holiday. The rush here was on Thursday and Saturday; Friday was a bad day.

Business men generally report a good year as to volume of sales. Snider & Hoole say their business is increasing; that they sold a hundred and fifty thousand more than last year; but they ask "What's the use?" and go on to say, "Our risks have been increased, but our profits have not been increased proportionately." Perhaps next year will tell them a different story. Their field may yield more to the acre next year than it did this, and its acreage has been increased. Is'nt that a point worth considering?

John Holland has been doing a brilliant business in brilliant things, never so good in volume and profits as this year.

Fulton—the Gravity Scale Company, I mean—has weighed the public and has found it not wanting in appreciation of a good thing.

The black beast of the retail stationery and book trade here, is the great house of John Shillito & Co., who are keeping a full line of stationery, plain and fancy, and of books, and are selling dead low. It is generally conceded that this branch of the Shillito house is really Belford, Clark and Co., of Chicago, and that the Shillito part of it is to use it to advertise their house. Nevertheless it hurts the stationery trade here, and that trade is retaliating by individually and by their influence boycotting the dry-goods house. Some of them say "according to present business ethics the trade belongs to whoever can get it, no one can complain of the Shillito enterprise in this line;" but at the same time they reserve to themselves the right to boycott the house, and make it uncomfortable as far as it lies in their power.

PRINCE WILLIAM.

DAYTON DOINGS.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, Ohio, December 25, 1882.

I take the advantage of a holiday to send what few items of interest there are in the stationery business. Last week opened badly for prospects of a good trade. Rain and mud make the storekeeper blue, but on Friday and Saturday it got a little pleasanter, and the holiday-buyers were out in force. I tried on Saturday to interview some of the trade on their trade this season compared with last year, but they were all too busy to answer me. Among the jobbers all seemed well pleased with their success, and shelves were bare of goods, especially in the better class of articles.

In Christmas cards the proper thing to do this year—from the artistic young lady's standpoint, at least—is to buy the card plain and decorate it with some original or copied design in water-colors. I have seen some very pretty ones decorated in this way, and comparatively cheap, not taking into account the time occupied in painting them. Candor also compels me to say that I have seen some that were the reverse of beautiful.

Travelers are beginning to put in an appearance for spring trade. Among others who have been here was Stanley Morrell, with Weill, Livingston & Co. He showed some very pretty goods in ladies' satchels, &c. Advance notices of the coming of many others have been received.

The firm of Thomas Nixon has been changed to Thomas Nixon & Co., he having associated with him his son Frank. The latter has been the active manager for many years, and has a very strong hold on the trade, both personally and on account of the superiority of their goods.

Among the paper mills, especially wrapping, the price of paper is lower than I ever knew it; the demand for it is good, but nearly all of the dealers are storing, as paper is no doubt being sold at less than cost of manufacture, and must advance, or the mills be compelled to stop. I don't think that I have ever tried to impress the fact on the trade—but it is time—that there are too many mills in the

MIAMI VALLEY.

Though we cannot create favorable circumstances, we can at least, refuse to join the envious throng that bark at the heels of their more fortunate fellows.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U.S.A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

Merry Christmas!

HENRY LEVY & SON,

477 BROADWAY, NEW YORK,

Cordially thank their many friends for their patronage during the present year. They will be ready to receive them early in the coming one with an entirely new line of SPRING GOODS.

L. PRANG & CO'S

PRICE LISTS OF OUR VALENTINES ARE NOW READY.

PRICE LISTS OF OUR VALENTINES ARE NOW READY.

1883 VALENTINES 1883

WE hereby beg leave to announce to the Trade the completion of our line of Valentines for 1883, in the preparation of which we have put forward our best energies to keep up to the increasing demand for artistic goods. As a proof of our endeavors in this direction we would mention the following artists as contributors to our line for this year:

MISS FIDELIA BRIDGES,	MISS L. B. COMINS,	WALTER SATTERLEE,
MISS L. B. HUMPHREY,	MISS ROSE MUELLER,	JEAN AUBERT,
MRS. O. E. WHITNEY,	F. S. CHURCH,	Of Paris, etc.

Same as last season, we furnish our Valentines plain, and also single and double, with silk fringe. All fringed cards are provided with protectors and envelopes to insure safe transmission through the mails.

Envelopes are furnished, **without extra charge,** for all cards costing $1.80 per set and over.

Attention is called to the **elegantly designed backs, a special feature of our cards,** adding greatly to the artistic value of the same.

Our assortment of plain cards ranges in price from 35 cents per set to $6 per set, and of fringed cards, from $1.60 to $12 per set.

Special attention is called to the **AUBERT VALENTINE** (so named after the eminent French artist Aubert, who designed the picture of the lovely girl contained therein.)

A large folding card with a wreath of flowers, printed on satin, and designed by Miss F. Bridges; facing this is the design by Aubert. The card is heavily fringed with silk, has a leatherette protector, and each card is encased in a neat box. Price, each, $5.

Of all Valentines costing $3 per Set and over, we are ready to break sets, if so desired.

REGULAR DISCOUNTS TO THE TRADE FROM ABOVE PRICES.

Besides the above attention is called to our **New Birthday Cards** and **Artistic Plaques** and other **Art Publications.**

OUR LINE OF EASTER CARDS WILL SHORTLY BE ANNOUNCED.

Intending exhibitors should make early application. Every information will be supplied by addressing

J. H. DE BUSSY,

93, Heerengracht, Amsterdam.

ANNOUNCEMENT.

WE would announce to the trade that we have remaining on hand a limited number of copies of the exquisite Valentine Poem, "My Love," which we published last winter, owing to the failure of the lithographers to furnish us all the printed sheets in time for us to mount and deliver to the trade previous to February 14th last. This valentine was illustrated in 16 colors, after designs by Carl Gutherz, the well-known Artist, and was mounted in several beautiful and novel styles, and altogether, was pronounced by critics to be the finest and most artistic Valentine ever published in this country, and one that would be of permanent value.

We append a few of the many newspaper notices published at the time it was issued.

As the number is limited, orders will be filled in the course that they are received, so that we would suggest the importance of ordering early all that are desired. Our orders for them last season continued coming until April, from those who had been unable to secure them before St. Valentine's Day.

NOTE.—We have but a very few copies mounted in styles No. 3 and 4, and cannot duplicate them after those styles are exhausted.

The designs are 6 × 9 inches in size, and mounted in five different styles, as follows:

STYLES OF MOUNTING.

No. 1.—Plain with silk hinge, cord and tassel; an ornamental card-board protector and envelope, ... each, $2.00

No. 2.—Same with heavy silk fringe, cord and tassels, card-board protector, and inclosed in a box instead of an envelope, ... each, $2.50

No. 3.—Mounted between heavy Passe Partout Mats, 8x11 inches; gilt edge, in box, each, $3.50

No. 4.—Bound in Album style, gilt edge, heavy beveled boards, silk finish muslin, in box, ... each, $3.50

No. 6.—Same as No. 2, but inclosed in a handsome Silk Plush Box, . . . each, $5.00

NEWSPAPER NOTICES.

"MY LOVE: A POEM FOR ST. VALENTINE'S DAY," is one of those beautiful conceptions which are perfectly suited to the purpose for which they are designed, and which, if they do make the sender's heart ache for the emptiness of his purse, proportionably heighten the happiness of the fair one who sees in the cost a measure of the passion she has inspired.

Certainly, this Valentine is elaborate enough to meet the requirements of the most exacting beauty, and might even stir the heart of a princess. * * * * What more can be desired to soften an obdurate heart or convey to a pretty bird, the tender prayer, "Mate with Me?"—*Independent, New York.*

THE old style of Valentine—a fragile offering of lace, paper and silk, apt to fall to pieces if touched or looked at very hard—is rare this year. In its place is the card, large and small, and the noticeable feature of the improvement is the introduction of floral landscape designs, with an appropriate bit of verse to set off the artistic design, and give it the added sentiment considered a necessary accompaniment. Among the choicest designs noticed, is one entitled "My Love," in the form of a six-leaved book, and mounted in various beautiful styles, the finest of which is in a box covered with plush. A spring scene with two doves nestling in the branch of a tree, made up the first page design. The succeeding pages disclosed groups of daisies, pansies, roses and violets; while the last design represented a merry Cupid with the traditional bow and quiver with a wreathed mirror resting upon the following inscription:

"Sweetheart, wouldst thou the features trace
Of that fair maid whose charms I've told?
Then look into thy looking-glass.
And wouldst thou know who is so bold?
Wilt thou be mine as I am thine,
I'll tell—I am thy Valentine."

—*Daily Tribune, Chicago.*

THE Acme Stationery and Paper Company have published a most exquisite Valentine entitled "My Love," artistically mounted in novel styles that will be generally admired.—*Daily World, New York.*

THERE certainly never were so many pretty things made before as in this year of grace, and one fairly gets dazed trying to make up his or her mind with regard to the relative merits of articles appealing to the cultured taste. This reminds me of a peep I have had of an Exquisite Valentine poem entitled "My Love," illustrated with six designs in water-colors, and finished in the highest style of art. Full of all Spring prettiness in pictured conceits are the illustrations by Carl Gutherz, in his happiest grace of drawing, and rich with the charm of his exquisite coloring. * * * * Thus one page, in whose foreground Cupid and two beautiful children play amid ferns and cat-tails and water reeds, on a shore dotted with daisies, under a sky where the crescent moon almost pales amid a myriad of stars, is still further illumined by such a verse as this:

"My Love is like the daisy bright,
Which gladdens all the fields by day,
And whispers to the stars at night;
While fairies list to what they say,
And angels come and go between,
Only by stars and flowers seen."

Another page between, with violets all in a sweet tangle of purple beauty, and so natural that they almost cheat you into reaching after them, incloses a verse as exquisite as the blossoms. * * * * I predict for this little art work an immense success, and I whisper my praise now, that I may say with a woman's delight a few weeks later, "I told you so."—*Spectator, St. Louis.*

— MANUFACTURERS OF —

Extra Heavy Drum Job and Newspaper and Country Cylinder Presses.

PRINTING PRESSES

THE above cut represents our NEW TWO-REVOLUTION PRESS The great advantages of this machine are its speed and the facility with which it can be handled for all kinds of work. In these times of Low Prices and consequently small profits, speed combined with good work is an advantage the value of which cannot be overestimated.

The above Press, for fine as well as fast work, became at once popular. The Cylinder revolves twice—first in a raised position to clear the form; the second time in contact with the form while giving the impression. The largest illustrated forms are printed at a speed of from 1,800 to 2,000 per hour, with perfect safety. Indeed, the speed is limited only by the capacity of the feeder. This Press is capable of doing the finest quality of ILLUSTRATED and COLOR WORK, and has proved to be the most economical and profitable Press yet introduced.

We have incorporated the following patented improvements: 1. Our Air-Spring and Governor, which enable the machine to run ONE-THIRD FASTER than any other Press of its class in the market. While at a speed of 1,800 per hour, and with the weight of a full form, about 4,000 pounds pressure is required at each end of the press to arrest the momentum and reverse the bed; but our Governor Attachment so completely controls the Air-Spring—increasing the pressure exactly with the increase of speed and momentum, and decreasing the same as the Press comes to a stop—that the great amount of spring required is no incumbrance or hindrance in the running of the machine, as it is with the wire-spring. When the Press comes to a stop, the Spring is thrown off automatically, so that it can be turned over the centre by hand with the greatest ease and without compressing the spring. 2. Our device for Controlling the Momentum of Cylinder, by which perfect register is insured at the highest rate of speed. This is an impossible feature on any other press. 3. Our Hinged Roller-Frame, which affords peculiar facility in handling the rollers and distributors. 4. Our Sheet Delivery without tapes, which is so easily adjusted that any variety of printed matter can be delivered to the Fly and deposited on the Pile Table without possibility of smut or blemish. For a still more rapid class of press-work, we build these Presses with TWO Form Rollers, supplied with the Table Distribution, or the Rack, Cam and Vibrator Combination, on which a speed of 2,500 per hour can be had.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW BOOK REST.

The cuts illustrate two forms of a new book rest manufactured by A. H. Andrews & Co., Chicago. The convenience of these is that with the customary receptacle for a dictionary it has two additional rests which enable the reader to keep more than one book of reference at hand and open for inspection. The rests are adjustable to any angle and can be raised or lowered. A lamp can be put on the platform at the top. One form, as can be seen, has a revolving book-case, which adds greatly to its usefulness in the study. Other designs are made, all revolving. The standards are of polished or nickel-plated iron; the base is solidly set and runs on casters; the woods used are finely finished.

New Book Rest.

BROOKE'S AUTOMATIC INK-STAND.

The advantage of an inkstand that opens and closes every time that the pen is dipped into the ink will be understood. How this is to be achieved will not be so readily conceived, but a glance at the illustrations will disclose the idea. The cover swings on a pivot, which is operated upon by a lever. When not in use the cover fits closely to the ink-well, as in Fig. 1, and excludes dust or insects. When it is desired to dip a pen into the ink, the fingers of the hand holding the pen touch the lever, as in Fig. 2, and this motion causes the cover to be lifted easily, and gives access to the ink. Removing the hand as the pen is filled, the lever rises and the cover falls. This inkstand is simple and strong, and is made in plain or figured bronze, nickel-plate, gold-figured nickel, single or double founts, flint or cut glass. J. A. Guss, Spring City, Pa., is sole agent.

JOHN HOLLAND'S NEW BUSINESS PENCIL.

— Patented May, 1882.—

CLOSED FOR POCKET.

Made of hard rubber, plain or handsomely chased with fine **gold plate mounting.** Is made to fit either the copying or black 3½-inch lead. Every Pencil warranted. Is the handsomest and most convenient Business Pencil ever offered to the Trade. Sells on sight for Fifty Cents each, retail. For sale by the Jobbing Trade, and

JOHN HOLLAND, Patentee and Manufacturer of Gold Pens, Pencil Cases, Fine Pen Holders, &c., **No. 19 West Fourth St., CINCINNATI, Ohio.**

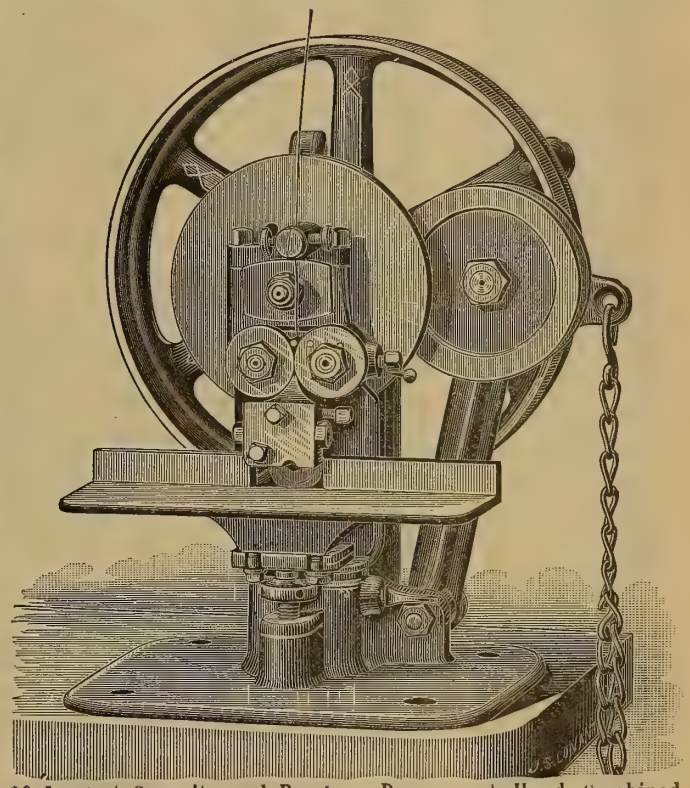
1882. PAPER HANGINGS. 1883.

By way of Customary Annual to the Trade, we beg to submit that the Samples now in our Agents' hands for Fall and Spring have been selected with most scrupulous care, and after an exhaustive examination of **All New Designs** cut by Standard Factories for the season's distribution.

We claim for the product a far **Higher Degree of Excellence** than heretofore compassed by any individual House, approximating, as closely as possible, a **Perfect Assortment.** Prices being equal, the comparative merit of those lines submitted to your notice will doubtless, to a great extent, control selection.

We challenge and respectfully solicit direct comparison of our collection with those of any other Houses representing that branch of artistic industry which is our **Exclusive Specialty.**

The untiring effort of over thirty years, which has resulted in our sales being the largest recorded for the past two seasons, has also given us an intimate knowledge of the wants of that widely extended trade to which we cater. This fact, coupled with unvarying promptness and watchful care of our customers' interests, will, we feel assured, secure for us a continuance of your esteemed patronage.



Our Agent will indicate, by direct correspondence, the date of his visit. Failing receipt of such advice, Samples shall be forwarded, free of expense, upon receipt of request.

Very truly yours,

JOHN J. McGRATH,

174 & 176 State St., Chicago.

I make heavy manilla envelopes of any size and shape: either flat or bellows pattern

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

John Bishop, dealer in fancy goods, Paterson, N. J., is dead.

D. R. Walker, printer, Newport, Ark., has been burned out.

E. H. Eyer, stationer, Delmar, Iowa, has been burned out; insured.

H. H. Brooks, printer, Mexico, Mo., has been burned out; insurance, $1,200.

Moritz Zwekerman, dealer in toys, Chicago, Ill., has been closed out by the sheriff.

Kingsbury & Wheatley, stationers, &c., Billings, Montana, have sold out to D. Malcolm.

Jennie M. Hicks, publisher of the *Herald*, Kansas City, Mo., has sold ut to John C. Shea.

A. Smith, publisher of the *Graphic*, Lake City, Minn., is about to organize a stock company.

McCaughey & Wikidal, manufacturers of fancy goods, Cincinnati, Ohio, have made an assignment.

Dubois & Giorgio, dealers in wall paper, Dayton, Ohio, have dissolved partnership. Ed. Dubois continues.

Mrs. T. J. Raymond, publisher of the *Journal*, Fort Wayne, Ind., has sold out to C. N. Ironsides.

Postley & Bertine, 286 Pearl street, forward samples of their yearly calendars, which are got up in good style.

Davisson, Hall & Co., wholesale dealers in fancy goods, San Francisco, Cal., have dissolved partnership and assigned.

A. S. Schoonmaker & Co., paper manufacturers, Baldwinsville, N. Y., have been succeeded by Kenyon & Dixon.

A. C. Farley & Co., publishers and manufacturing stationers, Philadelphia, Pa., have been burned out. Loss, $15,000; insurance, $12,000.

J. H. Bufford's Sons have in course of preparation several shape novelties, and have added to their valentine goods a beautiful line of pull cards. They report trade excellent.

Attention is called to the new advertisement by Charles J. Cohen, Philadelphia, in this week's issue. Mr. Cohen, with his accustomed alacrity, has all of his stock in shape for the coming winter and spring trade, and is prepared to show the fullest lines of imported and domestic goods in new and approved styles.

The Powers Paper Company has removed its salesroom and offices from Pearl street to 62 and 64 Duane street, where will be found a full line of all goods of which this concern makes a specialty. J. L. St. John continues his able management of the business, which under his direction has grown largely.

Marcus Ward & Co. have published their "Shaksperean" and "Day unto Day" calendars for 1883. The first has as an illustration a scene from "Macbeth," and the pad contains the usual daily quotations. The "Day unto Day" is a sacred calendar, with a figure illustrative of the angel of life; a scriptural quotation is given for each day. The "Calendar of the Seasons" is as pretty as usual, and has illustrations which are *sui generis* and elegant.

A meeting of the creditors of Cornwell, Price & Co., Detroit, Mich., who made an assignment a short time ago, was held yesterday at the rooms of the Stationers' Board of Trade. It was presided over by William T. Pratt. There were present, among others, the resident attorney of the Board of Trade at Detroit, and Mr. Lyon, one of the assignees of the firm. A committee of five was appointed, consisting of Andrew Little, of Farmer, Little & Co., chairman; J. S. Warren, of Warren, Fuller & Co.; Mr. Allen, of F. Beck & Co.; Mr. Fairchild, of J. Q. Preble & Co., and Mr. Langfeld, of Langfeld, Turner & Andrews, of Philadelphia. This committee is to make a thorough examination of the affairs of the firm, and report at the call of the chairman. The total liabilities in round numbers are $150,000, and nominal assets $108,000, embracing stock valued at $60,000, bills receivable, $5,000, and good book accounts of $44,000. The wall-paper dealers and printers' supply houses here are creditors to some extent. Bids for the stock of the bankrupt firm have been made as follows: Maxwell, of Chicago, 56¼ per cent. of inventory price; L. A. Barnes, 50 per cent.; L. S. Butterfield, 37½ per cent.; J. W. Fales, 35 per cent.; Barnes Brothers, 33⅓ per cent. The assignees have not yet accepted any bid.

The annual meeting of the trustees of the Stationers' Board of Trade will take place at its rooms on Tuesday afternoon next, January 2, at two o'clock, at which a large attendance of the members is expected, as the various reports will be submitted, and officers of the board will be elected for the ensuing year. A special meeting of the board was held yesterday afternoon, at three o'clock, to take action in regard to the next annual dinner. A resolution was adopted, authorizing and empowering President Georg L. Pease to appoint a committee of five to act as a committee of arrangements to take the matter in charge. This committee will be appointed this week, and all of the arrangements will probably be perfected by the date of the annual meeting next Tuesday.

Jas. D. Gill, Springfield, Mass., opened the holidays with a store stocked with fine paintings, art novelties, and an extended variety of goods suited to the season. Judging from the *Republican's* description of the store, it must have been a veritable bazaar of beautiful and rich things.

Thomas Nixon, paper-bag manufacturer, Dayton, Ohio, has admitted his son, Frank M., to partnership, under the style of Thomas Nixon & Co.

Geo. & Walter Parrish, Owensboro, Ky., from local accounts, seem to have made an elegant display of goods for the holiday trade.

Fox & Bishop, ink manufacturers, Syracuse, N. Y., have been burned out; loss estimated at $3,000; partly insured.

Timmonds & Williamson, publishers, Lima, Ohio, have dissolved partnership. W. W. Timmonds succeeds.

Paul Coper, dealer in fancy goods, St. Louis, Mo., has been attached for $2,700, and has assigned.

J. Monash, lithographer, Minneapolis, Minn., has been burned out. Loss $7,000; insured $4,000.

T. H. Woodworth & Co., dealers in printing inks, Cincinnati, Ohio, have made an assignment.

E. C. Markley & Son, printers and binders, Philadelphia, Pa., have been burned out.

Ford & Keiser, publishers, Truckee, Cal., have dissolved partnership.

G. Mitchell, dealer in fancy goods, Little Falls, N. Y., has sold out.

Robert Rutter, bookbinder, New York city, has been damaged by fire.

Swash & Sharpstein, publishers, Union, Ore., have dissolved partnership.

S. A. Barton, news and periodical dealer, Lynn, Mass., has sold out.

Lehman & Bolton, lithographers, Philadelphia, Pa., have been burned out.

Newcomb & Hays, publishers, Silver City, Idaho, have dissolved partnership.

Fritz Hafelfinger, fringe manufacturer, New York city, has made an assignment.

Brigham & Co., dealers in stencils, Boston, Mass., have been damaged by water.

Isaac C. Aston, bookseller and stationer, Columbus, Ohio, has made an assignment.

Jones, Elliott & Co., booksellers and stationers, Columbus, Ohio, are advertising to close out.

H. M. Hamblin & Co., wholesale and retail dealers in fancy goods, Charleston, S. C., have failed.

Dimond & Ross, printers, Minneapolis, Minn., have been burned out. Loss $23,000; insured $18,000.

Theodore F. Rodenbaugh, stationer, Norristown, Pa., has had his stock damaged by water to the amount of $1,000.

A. S. McDade nd L. A. Lipman have both started out this week for their regular spring trip for Boorum & Pease.

Sredman & Cartwright, Philadelphia, Pa., paper-stock dealers, have dissolved partnership. Francis Cartwright retiring.

A. M. Caldwell, bookseller and stationer, Iowa Falls, Iowa, has admitted A. Steese to partnership under the style of A. M. Caldwell & Co.

French & Choate, 4 Bond street, New York, have issued their 1883 catalogue of stationery and stationers' specialties. It is quite comprehensive, and will be useful to the trade.

Fred. W. Horn, of Koch, Sons & Co., is making a short visit to Richmond, Va., seeking to be benefited in health thereby. He has not yet recovered from his recent attack of malaria.

Harry G. Phillips has been compelled to relinquish his position as salesman for Koch, Sons & Co., his health having become much impaired. Upon the advice of his physician he has gone to Colorado Springs, Col., for a time. His condition just prior to leaving was considered somewhat critical.

Paul W. Latham, who has been salesman for the National Blank Book Company for a number of years, has been engaged by Koch, Sons & Co. to take the position made vacant by Harry G. Phillips, and will go with his new firm on January 1. Mr. Latham is well and favorably known throughout the stationery trade from his long connection with the National Blank Book Company, and the trade will no doubt be glad to greet him in his new position.

One of the rarest coins has turned up at Brun, Moravia. It is a silver piece, bearing on one side a portrait in relief of Attila, the famous king of the Huns, with the inscription "Attila Rex," and on the other the outlines of a fortified place, with the word "Aquileja." Its age is about 1,400 years.

FORMER STATIONERY.

Is it not strange in these days of cheap stationery to think of a time when both parchment and papyrus had become so rare and so exorbitantly expensive, that both Greeks and Romans were in the habit of using a palimpsest, which was simply some old manuscript with the former writing erased? Thus countless works of authors now celebrated, and whose every word is held priceless in this nineteenth century, were ruthlessly destroyed by their contemporaries. Verily, those prophets lacked honor.

Many were the expedients resorted to by the early scribes for the supply of writing materials. There was no scribbling paper whereon to jot down trivial memoranda or accounts, but the heaps of broken pots and crockery of all sorts, which are so abundant in all Eastern towns, prove the first suggestion for such china tablets and slates as we now use; and bits of smooth stone or tiles were constantly used for this purpose, and remain to this day. Fragments of ancient tiles thus scribbled on (such tiles as that whereon Ezekiel was commanded to portray the city of Jerusalem) have been found in many places. The island of Elephantine, on the Nile, is said to have furnished more than a hundred specimens of these memoranda, which are now in various museums. One of these is a soldier's leave of absence, scribbled on a fragment of an old vase. How little those scribes and accountants foresaw the interest with which learned descendants of the barbarians of the isles would one day treasure their rough notes!

Still quainter were the writing materials of the ancient Arabs, who, before the time of Mohammed, used to carve their annals on the shoulder-blades of sheep; these "sheep-bone chronicles" were strung together, and thus preserved. After a while, sheep's bones were replaced by sheep's skin, and the manufacture of parchment was brought to such perfection as to place it among the refinements of art. We hear of vellums that were tinted yellow, others white; others were dyed of a rich purple, and the writing thereon was in golden ink, with gold borders and many colored decorations. These precious manuscripts were anointed with the oil of cedar to preserve them from moths. We hear of one such in which the name of Mohammed is adorned with garlands of tulips and carnations painted in vivid colors.

Still more precious was the silky paper of the Persians, powdered with gold and silver dust, whereon were painted rare illuminations, while the book was perfumed with attar of roses or essence of sandalwood. Of the demand for writing materials one may form some faint notion from the vast manuscript libraries of which records have been preserved as having been collected by the Caliphs both of the East and West, the former in Bagdad, the latter in Andalusia, where there were eighty great public libraries, besides that vast one at Cordova. We also hear of private libraries, such as that of a physician who declined an invitation from the Sultan of Bokhara because the carriage of his books would have required 400 camels. If all the physicians of Bagdad were equally literary the city could have scarcely contained their books, as we hear that the medical brotherhood numbered 860 licensed practitioners.—*The Gentleman's Magazine.*

Cowardice asks: Is it safe? Expediency asks, Is it politic? Vanity asks, Is it popular? But conscience asks, Is it right?

NEW YORK, THURSDAY, DECEMBER 28, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

WE print in another column full particulars of the cost and what should properly be done to enter goods at the International Exhibition, which is to open at Amsterdam, Holland, on May 1, 1883. We urge upon American manufacturers the importance of being represented at that Exhibition.

DON'T forget the hospitals! Hospital Saturday and Sunday are December 30 and 31 respectively, and all classes of citizens are invited to contribute to the charitable hospitals of this city through the collections to be taken up in the churches or through the different trade auxiliaries. This charity commends itself to all.

A FAILURE has just occurred in this city, and one of the reasons assigned for it is a "poor fall trade." This is about the weakest excuse that we have yet heard of for incompetent management and shocking want of enterprise. We know whereof we speak when we say that the house referred to drove away people who were naturally its customers, not only by indifference to their demands and by the conduct of its employees, but by asking high prices for its goods, when competing houses were able to sell precisely the same articles at much lower rates. The fall trade, all around, has been good, except where mismanagement has prevailed, and in this case, as in others of a like character it will not do to plead that people will not buy, when they have bought freely.

IT is stated that the Commercial Travelers' Association is trying to secure the passage of a law prohibiting the assessment of special taxes by any State or municipality discriminating against citizens of any other locality. While it is within the province of Congress to make such an enactment, a law of this character would be simply an affirmation of a constitutional provision which denies the right of any State—and, per consequence, any municipal government—to make such distinctions. It is proposed to make it a misdemeanor, punishable by fine or imprisonment, or both, for any one, acting in an individual capacity or as a State or municipal officer, to interfere with a commercial traveler, lawfully engaged in selling goods by sample. Perhaps this is the best way to secure the enforcement of the constitutional prescript; but after all, it is open to the objection that the same constitutional principle being involved it will be as much a subject of litigation as ever, and the question of the legality of the special tax will come up in another form. The commercial travelers ought long ago to have made the issue in every State and town. There have been decisions enough in their favor, and if it is necessary to secure a final judgment of the Supreme Court of the United States, a case could be made broad enough in its legal definitions to cover every ground of dispute. It is a mistaken idea, which seems to be entertained by some journals, that only the salesmen of a house are subject to the special taxes and license fees, and their principals would be exempt. Whether a merchant sells by sample, through his salesman or in person, there is no difference in the standing of the individuals. Each are equally liable to tax. For this reason the salesmen ought not to be compelled to fight this question out alone. The houses which employ them are as much concerned and are generally called upon to pay the expense. We are surprised that the mercantile community has not taken this matter up more energetically. It has been talked of and talked of, and the newspapers, daily and weekly, commercial and non-commercial, have had much to say about it; but we have not yet reached the end. If the subject was taken up in a business way, with a little energy put into the methods of dealing with it, a determination could soon be reached.

BRONZING PAPER.

The following is given as a very effective process for bronzing paper, &c.: 1. Dissolve gum-lac in four parts by volume of pure alcohol, and then add bronze, or any other metal powder, in the proportion of one part to three parts of the solution. The surface to be covered must be very smooth. In the case of wood, one of several coats of Mendon or Spanish white are given, and the object is carefully polished. The mixture is painted on, and when a sufficient number of coats have been given, the object is well rubbed. A special advantage of this process is that the coating obtained is not dull, but can be burnished. 2. Another method is to coat the object with copal or other varnish, and when this has dried so far as to become "tacky," dust bronze powder over it. After a few hours the bronzed surface should be burnished with a burnisher of steel or agate.

THE HOLLAND INTERNATIONAL EXHIBITION.

The Holland International Exhibition, which is to be held at Amsterdam, affords a good opportunity for the display of American goods and for the extension of American trade.

As the exhibition opens on May 1, 1883, it is necessary to advise those who propose to exhibit as the following details for their government:

Applications should be made without delay, to secure eligible sites. Goods should be shipped from New York on or before February 20, 1883. If in any special case a longer time is required it must be by special arrangement when the application is made. Space will be assigned in the order of application.

The tariff of rates for space, counters, cases, &c., in American currency, with other particulars to be observed, is as follows:

IN THE PRINCIPAL BUILDING AND MACHINE GALLERY —FLOOR SPACE.

No. 1.	Per square mètre of frontage	florins,	25.	= $10.00
2.	For isolated spaces	"	50.	= 20.00
	In the annexes in the grounds	"		=
3.	Per square mètre	"	12.50	= 5.00
	In the open air	"		=
4.	Per square mètre	"	7.50	= 3.00
5.	Glass case, per mètre	"	100.	= 40.00
6.	Open case, cloth, leather, &c	"	85.	= 34.00
7.	Simple counter	"	25.	= 10.00
8.	Counter with shelves	"	50.	= 20.00
9.	Ordinary shelves, per square mètre	"	3.50	= 1.40
10.	Shelves, covered with oil-cloth, per sq. mètre	"	5.	= 2.00

The above rates are payable in installments as follows:

The first installment one month after the delivery of the certificate of admission.

The second installment, four months after the delivery of the certificate of admission.

The third installment, on June 1, 1883.

The failure to pay any one of these installments will be regarded as a forfeiture ot such payments as have been made.

Exhibitors are informed that all the space required must be specified in their first application, as it is impossible to accept supplementary demands for additional space. Applications for space to be made as promptly as possible after receipt of this.

Duties in Holland.—Exhibition goods enter free of duty until sold, when they are subject to the regular tariff, which is seldom over 5 per cent., while many articles are free.

Exhibitors can learn the exact tariff on their goods by applying at this office.

Special Notice.—Explosives and Combustibles.—Shippers are cautioned, before forwarding any articles extra-hazardous, to inquire under what conditions (if any) such articles can be shipped.

Shipping Marks.—Each package should be distinctly marked to correspond with the memorandum invoice accompanying, which invoice should give in detail the contents of each package. It is desirable that such marks should be so placed that there should be space sufficient above the marks to stencil in legible characters the number of the section and group to which the goods belong; which marks will be placed on the packages here, as goods are received.

Insurance—Will be effected (if desired) by the General Agent, covering them at the valuation given by the exhibitor, plus 10 per cent. advance—it being understood that the valuation given is the regular market rate for the merchandise.

This iusurance will cover the goods from their arrival here until they are placed in the exhibition buildings; or, if desired, they will be covered during the term of the exhibition; or until such time as they are removed from the exhibition buildings; or for the round trip, if the goods are to be reshipped to the United States.

It is important that each exhibitor should specify clearly what the policy of insurance should cover, to avoid any possible misapprehension.

Freight.—The steamship line to Holland has reduced the rates one-half, on goods destined for the Exhibition—viz., 15s., or, say, $3.75 per ton of 40 cubic feet, and 10s., or, say, $2.50 for 1,000 kilograms — to say 2,200 pounds weight, plus primage.

Boxing and Strapping.—Shippers are desired, in their own interest, to ship their goods in strong packages, packed in the best manner, and it is well to strap all boxes for greater security.

When it can be done, it will be well to fasten the covers of boxes with screws instead of nails, in order that the goods may be repacked in the same boxes, either for shipment back to this country or elsewhere, as sold.

It is the intention of the general agent, who takes charge of these goods, to have all packages suitable for reshipment placed in a storehouse in Amsterdam, provided that they can be stored at a rate advantageous to the shipper, to avoid purchasing new packages.

Charges.—The general agent here will take entire care of the goods after their arrival in New York, charging regular rates for storage and cartage to steamer, as well as for cartage from steamer at Amsterdam to the Exhibition grounds.

Care of Goods at Exhibition.—Any exhibitor not employing a special agent to take charge of his exhibits can have his goods properly attended to during the term of the Exhibition, under such instructions as he may furnish.

The expense of such attendance to depend on the nature of said instructions and the character and extent of the exhibit. On receipt of such instructions, together with application for space, the exhibitor will be duly advised of the expense he will incur.

It will be readily understood that the charge for such service must depend on whether his goods require constant or partial attendance, and whether the party in charge must devote himself exclusively to his goods or can at the same time attend to other goods of the same class and contiguous. It is therefore apparent that exhibitors should be very explicit in stating the nature of the service required.

Sale of Exhibits.—Through the same agency, exhibits will be disposed of, under instructions from the exhibitor, either for Holland or any other market, on the best terms obtainable and at a fair rate of commission, depending on the character of the goods. These sales will in every case be for cash on delivery, unless otherwise authorized.

Orders for Goods.—Orders will be taken for various markets, under such instructions as may be furnished, and at a rate of commission agreed upon. Special effort will be made to secure such orders and establish agencies for the sale of the goods of any exhibitor, in Holland or other foreign markets, when desired.

Further particulars respecting sale of exhibits, orders for goods, or establishment of agencies will be furnished on application.

Suggestions.—Exhibitors are respectfully reminded that the value of an exhibition of their manufactures, &c., depends almost entirely on the attention they receive on the part of the person in charge; that properly handled, at an international exhibition like that to be held at Amsterdam, goods can be introduced or their sale extended in almost any foreign market to which they are adapted. If not properly presented, in a large majority of cases, an exhibit would be useless.

It is essential to the interests of exhibitors that, in the case of almost all articles, a concise and carefully-prepared description of goods (with illustrations when necessary) should be printed in the French, German and Dutch languages for judicious distribution by the person in charge. This and all other matters relating to the interests of exhibtors will be faithfully attended to (under any guarantees desired) by the general agent; so that exhibitors can rely on it that from the delivery of the goods in New York their instructions will be faithfully carried out under such contract as may be entered into, blank forms of which contracts will be furnished according to the service required in each case.

In order to allow ample time for the proper classification and arrangement of exhibits, it is all-important that applications for space be made without delay.

J. H. de Bussy, general agent for THE AMERICAN STATIONER in the Netherlands, will represent this paper at the Exhibition, and will also act as agent for American manufacturers who may wish to be represented there.

WHAT A COIN DID.

A coin is in itself a history. There was once a lost city which owes its place to a coin. For over a thousand years no one knew where Pandosia was. History told us that at Pandosia King Pyrrhus collected those forces with which he overran Italy, and that he established a mint there; but no one could put their finger on Pandosia. Eight years ago a coin came under the sharp eyes of a numismatist. There were the letters Pandosia inscribed on it, but, what was better, there was an emblem, indicative of a well-known river, the Crathis. Then everything was revealed with the same certainty as if the piece of money had been an atlas, and Pandosia, the mythical city, was at once given its proper position in Bruttium. Now, a coin may be valuable for its artistic merit, but when it elucidates a doubtful point in history or geography its worth is very much enhanced. This silver coin, which did not weigh over a quarter of a dollar, because it cleared up the mystery of Pandosia, was worth to the British Museum $1,000, the price they paid.—*Exchange.*

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, December 27, 1882.

THE MONEY MARKET.—The money market has undergone no appreciable change since our last, and remains in a comfortable condition. Loanable funds are in ample supply, and discount rates remain 6@7 to 10 per cent. The stock market is seasonably dull, the recorded sales being the lightest in many months. There has been an entire absence of feature, and almost nothing at all in the way of interesting rumor or gossip. The tone has been generally very firm, and in some instances a slight ad vance has been recorded. Government bonds are strong and moderately active, and railroad bonds quiet, with prices irregular. Bankers' sterling exchange is very firm and active, several houses advancing their posted rates for both time and demand bills. There is considerable demand from merchants as well as bankers. Commercial bills are only moderately plenty, and rates are steady. Continen tal bills are generally firm.

THE PAPER MARKET.—It is seldom that the paper market at this season of the year has presented a more favorable outlook than at present. There was a fear early in the season that if there was no hindrance to the mills running, and we had a wet season, prices of paper generally would undergo a shrinkage. There has been no very great inconvenience on this account, although it is estimated that, if there had been a wet season, a greater quantity of paper would have been produced and sold at lower prices. As it is, with the exception of straw wrappings and boards, all grades have held a very firm position, and it is a fact that there is now some scarcity of news, the demand keeping up very closely to the production. City dealers at this time are very quiet, store trade being very light, but some of them are securing very good orders for goods to be made up after the beginning of the new year.

THE STATIONERY MARKET.—With the close of the holidays the wholesale trade has settled down to the quietude which usually follows a busy season, and very little activity is looked for very soon. Almost every house in the trade is now in the midst of the work of taking an account of stock, and balancing up their books to begin the new year. To a great majority of those engaged in the trade the year has been one of much prosperity; while to only a comparatively few has it brought misfortunes and left sanguine hopes unfulfilled. The general outlook is for a steady and profitable trade in the coming spring season. A number of the traveling salesmen of our city houses left the city this week, carrying samples of spring goods, and others will follow inside of another week. Prices generally hold steady.

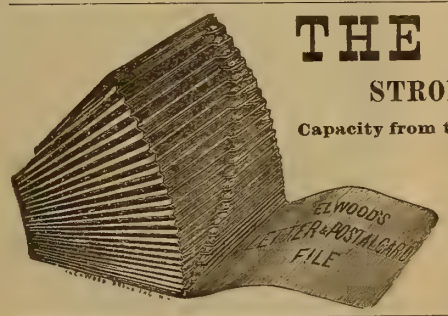
BOOK ILLUSTRATION, OLD AND NEW.

BY J. COMYNS CARR.*

(Continued.)

But the processes hitherto described, although they serve to illustrate the successful advance of mechanical invention, have only an indirect bearing upon our subject. They suggest comparison, not with the wood-block, but with the various modes of engraving on copper and steel; and although the initial outlay needed to produce one of these plates is infinitely below what would be demanded by a skilled artist, who had to etch or grave the design upon the plate, the means of multiplying impressions still effectually hinders the general application of such processes to the purpose of book illustration. All pictures taken from a copper-plate press must rank as what the French style *planches à part.* They can be inserted in the pages of a printed volume, and may powerfully add to the attractiveness, but they cannot be printed with the same facility or by the same means as are employed for producing impressions from movable type. If, therefore, the genius of modern scientific discovery had gone no farther, its influence upon the practice of book illustrations would not have been considerable. These processes, indeed, are highly valuable in the enlarged opportunities they offer for the reproduction of works of art. M. Goupil's invention has in a measure superseded engraving as a mode of multiplying copies of a picture in oil or water color. The photograph is taken direct from the original painting, and transferred to the copper without the intermediate aid of any skilled handicraft, and however much opinions may differ as to the beauty of the results so obtained, it is impossible to deny that they carry an astonishing effect of illusion and resemblance. For it is to be observed that the impressions from Messrs. Goupil's plates do not merely compete with the older processes of engraving, but, in some respects, may be said to supersede them. Engraving on copper or steel, even in the hands of the most skillful exponents, does not aim at any minute imitation of the painter's handling. It has always been regarded rather as a translation than a reproduction, and its exercise has been determined by special laws and traditions, which may be said to constitute a reorganized convention of style. In the first place, it is to be noted that, save in the case of mezzotint, all engraving is executed by means of line, and this fact serves, in itself, to distinguish the reproduction from the original, and to make the spectator sensible that the artist's invention has been translated into another language. And even in the finest examples of mezzotint, which so successfully preserve for us the masterpieces of Reynolds and Gainsborough, there is no attempt to suggest the actual appearance of the picture. The necessities of translation are still frankly and clearly acknowledged, and although the subtle modulation of tone comes nearer to the effect of painting than anything that can be produced in line, the result nevertheless ranks as the product of a separate art, which leaves room for the assertion of the engraver's individual style. But with these mechanical processes, based upon photography, this is no longer the case. It is the picture itself that is transferred to the plate, shorn only of the grace and attraction of color. Something is necessarily lost by the way, for color still offers certain hindrances to the photographer which modern science has not yet entirely removed. But, on the other hand, the mechanical process is able to afford a

* Lecture delivered before the Society of Arts.



degree of realism in regard to the details of execution such as no engraver would have thought of attempting. In the most successful of these plates the actual impasto of the paint is successfully reproduced. The varying relief upon the canvas, which results from a vigorous handling, tells as a relief upon the carbon print, and is transferred again to the metal from which the printed impression is finally taken. Every touch of the brush is faithfully preserved, even where it is not exaggerated, and where color is added, the effect of illusion is sometimes positively startling. This use of color is, of course, only applicable to reproduction of water-color drawings, and is, in fact, only a revival of a mode of copper-plate printing that was practised in England a century ago. It is impossible to get from a metal plate either the solidity or the gradation of a finished painting in oil, but on the other hand, transparent tones of color may be so distributed over the surface of the metal as to give the effect of a wa hed drawing in water-color. There has, no doubt, been seen in the printsellers' shops some marvelous imitations, by Messrs. Goupil, of water-color drawings by artists of the Continental schools. The more elaborate methods employed by our own water color artists would not, so readily, lend themselves to the process; but where the technical means are simple, and where the tints are laid on in a broad style, the resemblance is striking an i remarkable. As we are treating of color printing, I may be allowed to point out that the means here employed are essentially different from those which are used for wood blocks. The preparation of a copper-plate, from which a colored impression is required, is in itself an artistic process. The printer paints upon the metal as though he were painting upon paper. Each separate space must be supplied with its appropriate tint, which again must be cle ined in such a way as to yield varying strength of tone; and when this has been done, the impression is taken at once, and by a single printing. Colored wood-blocks are produced according to a totally different system. Each different color requires a separate printing and a separate block, just as in colored lithography there is to each color a separate stone. Colored block printing which finds its widest employment in the production of wall-papers, has lately been carried to a very high degree of perfection in the children's books issued by artists like Mr. Caldecott and Mr. Crane. If we examine these pictures we will find that great care is taken to give refinement and delicacy of tone by a finely-cut tint under the surface of the color. Just as stained wood i- always superior in effect to any imitation by means of solid pigments, from the fact that the natural grain showing through the color gives variety and delicacy to the surface, so, in the same way, this mechanical graining of the wood-block tells in a manner equally agreeable and effective. To my thinking, the best of these colored wood-blocks far surpass in artistic merit even the most elaborate and expensive efforts of chromo-lithography. It seems almost impossible to get from the stone the same purity and freshness of tint that may be secured on wood, and although the resources of the latter are strictly limited, its finer quality tells strongly in its favor. The defects of chromo-lithography, for the purposes of illustration, were very strikingly shown in an expensive work on Japanese art lately published by Messrs. Audsley and Bowes. It would be impossible to have an example of a more lavish and luxurious style of execution, and yet it must be admitted, I think, that the result conveyed a very indifferent impression of the objects chosen for reproduction. The Japanese artist, whether he works on paper or porcelain, in lacquer or in metal, is, above all things, distinguished by the simplicity and freshness of his coloring. He does not aim at elaborate realism or gradation in tint, or at complex effects of tone, but he seeks rather to gain his effects by right choice and skillful combination of pure tints. Everything in his case depends upon quality of color, and it is just this pure quality which lithography so often fails to render. Its helplessness in this respect is shown no less clearly in the careful reproductions of the frescoes and pictures of the early masters issued by the Arundel Society. No one can fail to recognize and to acknowledge the conscientious labor bestowed upon these works; but at the same time it must be frankly admitted that the simplest copy in water-color gives a truer impression of the original than can be gained even from the most successful of these essays in chromo-lithography.

[To be Continued.]

HOW THE SPECTROSCOPE FORETELLS RAIN.

And if the air vertically above any one place becomes presently charged with more than its usual dose of such transparent watery vapor (as it easily may, by various modes and processes of nature), the spectroscope shows that fact immediately, even while the sky is still blue; clouds soon after form, or thicken if already formed, and rain presently begins to descend.

But how does the spectroscope show to the eye what is declared to be invisible in all ordinary optical instruments? It is partly by its power of discriminating the differently colored rays of which white light is made up, and partly by the quality impressed on the molecules of water at their primeval creation, but only recently discovered, of stopping out certain of those rays so discriminated and placed in a rainbow-colored order by the prism and slit of the spectroscope, but transmitting others freely. Hence it is that, on looking at the light of the sky through any properly adjusted spectroscope, we see, beside the Newtonian series of colors from red to violet, and beside all the thin, dark Fraunhofer, or solar originated lines, of which it is not my object now to speak, we see, I say, in one very definite part—viz., between the orange and yellow of that row of colors, or "spectrum," as it is called—a dark, hazy band stretching across it. That is the chief band of watery vapor; and to see it very dark, even black, do not look at a dark part of the sky or at black clouds therein, but look rather where the sky is brightest, fullest of light to the naked eye, and where you can see through the greatest length of such well-illuminated air, at a low rather than high angle of altitude, and either in warm weather, or, above all, just before a heavy rainfall, when there is and must be an extra supply of watery vapor in the atmosphere. Any extreme darkness, therefore, seen in that water-vapor band beyond what is usual for the season of the year, and the latitude of the place is an indication of rain material accumulating abnormally; while, on the other hand, any notable deficiency in the darkness of it, other circumstances being the same, gives probability of dry weather, or absence of rain for want of material to make it; and the band has, therefore, been called, shortly, "the rain band." Thus, also, "rain band spectroscopes" have been specially constructed by several most expert opticians, in size so small as to be carriable in the waistcoat pocket, but so powerful and true that a glance of two seconds' duration through one of them suffices to tell an experienced observer the general condition of the whole atmosphere. Especially, too, of the upper parts of it, where any changes—as they take place there almost invariably earlier than below—enable such an observer to favor his friends around him with a prevision of what they are likely soon to experience.—*Popular Science Monthly.*

Power Embossing PRESS.

THIS is a powerful and simple machine, and is complete in every respect. The power can be thrown off and a break stops the bed instantly; thereby saving any covers or expensive plates from being damaged. The press is worked by a cam and toggle: the impression is regulated by bevel-cut gears on top, and the bed platen can be run up or down by hand-wheel on left side. Our new method of using steel rods makes the press much stronger than iron cast frames. It has a movable bed; can be used for steam or gas heat; is supplied with oil cups. This Embosser is strong and large enough for all regular work in a bindery.

Space between upright rods, 17 ins. Size of head, 9½ × 13½ ins.

PRICE, $375.00.

THE U. S. TABLET COVER AND BLOTTER

The Cheapest and Most Convenient Article of the kind in the Market.

THE CHEAPEST ARTICLE A PRINTER CAN USE.

A.—Case with Lower Slides pulled down ready to receive Tablet. B.—Tablet of Letter Heads in Case. C.—Bill Heads in Case. D.—Cases filled and put away with other books.

The above cut represents our Cover for Tableted Stationery, which is just now coming into general use; it is suited to the COMMON KIND of Tablets or Blocks in which so much stationery is now put up, and when the same is covered with this case it is as well preserved as a regular bound book, with the addition of a Blotter always ready for use. It is an ordinary book cover, well bound; the lower leaf is supplied with four hooks or clasps; the upper ones are pointed and cut their way between the card-board at the top of the tablet and the first sheet of paper. The lower clasps slide up and down, so that after the upper hooks have been inserted, being pushed up, they overlap the card-board and hold the tablet in place.

TESTIMONY OF LIEUT.-GOV. BYRON WESTON.

I witnessed the test made by your Superintendent of the fire-proof qualities of an express chest and bond and note case manufactured by the Magneso-Calcite Fire-Proof Company, at Nantasket Beach, on Friday last. After being embedded in coals for one and one-half hours, the contents of the express chest, consisting of papers, greenbacks and lucifer matches, were found to be in perfect condition, there being nothing to indicate that they had been near a fire except a slight smell of smoke. Upon opening the small bond and note case, its contents were found to be in equally as good condition as those of the express chest, although it had been exposed to a severe test for more than half an hour. There can be no question but that the material used by your company is perfectly fire-proof.

DALTON, MASS., August 30, 1881. Yours truly, (Signed) BYRON WESTON.

Erie and Chicago Line

PASSENGER ROUTE.

THE SHORTEST, QUICKEST, AND SAFEST ROUTE to all points EAST. Fine tracks and lowest rates. The only route running **PULLMAN PALACE HOTEL COACHES** from

CHICAGO to NEW YORK,

LEAVING AT 6.10 P. M.

and the only route by which passengers from the NORTH-WEST can connect at CHICAGO and secure locations in these Palace Hotels on Wheels.

You should travel by the **E. & C. LINE,**

BECAUSE its trains run **through** from Chicago to New York, avoiding the dangers of transfers, the risks attending the changing of cars, and the possibility of missing connections.

BECAUSE the PALACE HOTEL COACHES run in connection with its trains, furnish Meals as good as can be had at any first-class hotel, and allow passengers to eat with as much comfort as at their own homes.

BECAUSE not one passenger has been killed or even injured on its trains since the opening of the line five years ago. Nor has an accident of any kind occurred.

BECAUSE the great variety of scenery on this line renders the journey pleasant and profitable.

BECAUSE provision has been made for running the trains from Mansfield, "Special" to destination, whenever they arrive after departure of train forming regular connection. This insures a continuous passage between New York and Chicago.

☞ When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving 'honorable mention.' Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

THE LIVERMORE STYLOGRAPHIC PEN.

(Full Size.)
Patented January 4, 1881.

Endorsed unanimously by the Trade as giving perfect satisfaction to their customers. Many say "It is the only Stylographic Pen worth having at any price." More of these goods are sold and used than of all others combined. They always command a ready sale; try them.

(Closed.)

(Open.)

Our New Pen, "THE MONARCH," has the reverse case—closing up short for the vest pocket—holds a large quantity of ink and is made very strong and substantial.

LIVERMORE'S STYLOGRAPHIC LEAD PENCIL.

(Full Size.)
U. S. Patent, September 13, 1881, also patented in foreign countries.

This Pencil is the greatest novelty of the season; contains valuable features never before combined in any lead pencil It sets the lead automatically, ready for use, and by a single motion the lead is retired within the case after using. It is the most substantial Pencil ever produced, is handsomely made with Hard Rubber Case, Nickel or Gold-Plated Trimmings, as desired. It sells at sight.

The demand for the above goods is constantly increasing, due entirely to their superiority over all others. They are made by the Stylographic Pen Co., of Providence, R. I., who own and run the Largest Factory in the World devoted entirely to this class of goods.

STYLOGRAPHIC INKS,

Especially adapted for Stylographic Pens,

IN COLORS, BLACK AND COPYING.

Now in use in over Half a Million Stylographic Pens, and unexcelled for general use.

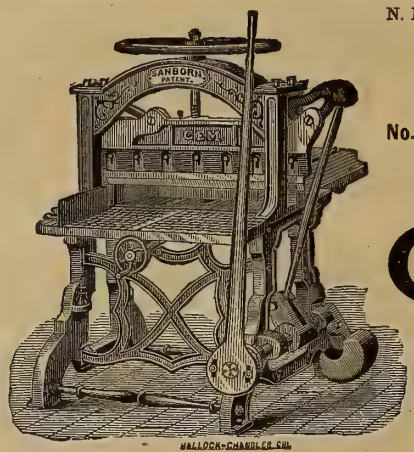
CHICAGO.

HOW LACQUER WARE IS MADE IN JAPAN.

(Concluded.)

If small squares of gold-foil or of colored shell are used in producing the pattern, they are now applied one by one on the point of a bamboo stick, the spot where they are to be affixed having been smeared with a little Ro-se lacquer to make them adhere. When all that is required has been affixed, a piece of soft bibulous paper is spread over the freshly done parts, and pressed very carefully with the finger. This is to get rid of as much of the Ro-se lacquer as is not covered by the gold squares as possible; the article is set to dry for twelve hours, and then the portion where the gold has been applied is gently polished with a little camelia charcoal on the point of the finger, to get rid of the remainder of the Ro-se lacquer. Shell patterns, and the coarser kinds of gold dust that may be required, are applied in the same manner. The finer kinds of gold dust are applied next, over a coat of Shitamaki lacquer, and the article set to dry for twelve hours. The remaining processes of polishing, drying, &c., are the same as in first-class flat-gold lacquer.



For making raised lacquer patterns on plain wood the whole surface is covered with tin-foil, stuck on with rice paste, to keep the wood quite clean, and then the place only where the pattern is to come is cut out. In making all first-class lacquer the edges of every article are pasted over with tin-foil to prevent their being rubbed or injured by the workman, and the same is done over each portion as it is finished.

The above is the ordinary method of making best raised lacquer, but there are innumerable modifications of one process or another, according to the object to be produced.

In making raised lacquer on inferior articles the methods do not vary much from the good kinds; the work is merely less carefully executed. The saving is in the quantity and quality of the gold dust used and the absence of minute afterwork, or in the use of silver and tin instead of gold dust. In the very cheapest kinds burnt tin dust is used instead of charcoal over the first coat of Shitamaki. This is burnished bright, and over it a thin coating of lacquer and gold dust is applied. At first it looks well, but loses its color in a year or two. By using tin powder the same height is attained in one coat that would necessitate at least three coats of lacquer and charcoal dust. This kind of work is, however, only used for cheap articles for foreign export, and has been quite lately introduced.

For lacquering on iron or copper, brass or silver, the metal is smoothed and polished, and then given a coating of "crude lacquer," or "black lacquer;" the article is put over a charcoal fire, and the lacquer is burnt on to the metal till all smoke ceases to escape. The fire must not be too fierce, and the metal must not be allowed to get red hot, or the lacquer turns to ashes. After the lacquer has burnt quite hard, the surface is rubbed smooth with Largerstramia charcoal. These operations are repeated three or four times, till a good foundation of lacquer has been obtained. Then the same operations are repeated as in making best black lacquer, Togi-dashi, flat-gold lacquer, or raised gold lacquer, only that the lacquer is burnt dry over the fire instead of being dried in the press. The lacquer is thus rendered quite hard and very durable. After the first two or three coats have been burnt on, the subsequent drying processes can be carried on in the damp press, should it be so desired.

In winter or when an article is required in a hurry, the workmen sometimes put a charcoal fire in the press, over which a pan of hot water is placed. The steam which is thus generated helps to dry the lacquer in an hour or two, which would take twenty-four hours to harden ordinarily, but the lacquer thus dealt with loses its strength, and is never very hard. Black lacquer turns a rusty brown, the coloring virtue of the iron being apparently lost, and therefore this plan is never adopted for good work and in second-rate work only for under coats.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**

Each sheet is water-marked with name and date.

ANNOUNCEMENT TO THE TRADE.

The New A. T. Cross "Business" Pencil,

U. S. PATENT AUG. 29, 1882. PATENTED IN ENGLAND.

No. 100. Mounted Enamel Pencil.

We take pleasure in presenting to the Trade our lately perfected, neat, substantial and convenient Pocket Pencil, made in various styles, and for which we claim superior excellence over any pencil ever placed on the market. Its most prominent feature is known as a **"Propel, Re-pel and Ex-pelling Lead,"** three features never hitherto brought into one combination. It is also made strong and durable in all its parts, the cases of every style (save one) being of Day's best quality hard rubber, and the mountings are of superior gold stock plate (not the ordinary electro plate or fire gilt, which soon wears off) and will keep bright and do service for years. Prices are nearly 50 per cent. less than any goods of the **same grade** that have ever been offered, and we recommend the early attention of the Trade to this pencil.

The accompanying are cuts of the four leading styles, retailing from 35 cents to 75 cents each.
